

Machining of ASTM E647 Compact Tension Specimens

- The metal blanks will be shipped in a pallet with multiple boxes inside. The blanks that will be received have the following size: 4x3.85x1 inches
- Each metal blank has the outline of the drawing attached to it to indicate the orientation of the notch. **This orientation shall be maintained for final machining.**
- Each metal blank reports its name on the attached outline and written on it. Please refer to the list below reporting all the blank numbers and sample names. **The reported names shall be kept for the final machined samples.** Stamping or engraving the name of the sample is allowed only on the faces indicated by the arrows below.

- Each sample shall be bagged separately with the name of the sample written on the bag.
- The material is cast Nickel Aluminum Bronze and as a cautionary note, some of the blanks have visible porosity.
- Metal blank Names are reported below. Blank numbers are not sequential and for identification only, please use the Sample Names for labeling.
