

Company Name: Atlas Systems Integration and Support Technologies

POC: Mr. Jesse R. Crifasi, VP Army Business

URL: www.atlasasist.com

List of Capabilities: Services provider for personnel trainers/ integrators/ SMEs for the following disciplines:

- Cybersecurity
- Intelligence and Analysis
- Maintenance and Logistics
- Training and Exercise Design
- Fires and Targeting Integration

Company Name: Keysight Technologies

POC: Jonathan Clifton

List of capabilities: RF technologies, simulation, AI, testing, measurements, and automation, sensor technologies, 5G/6G

Company Name: TurbineOne

POC: Justin Haynes justin@turbineone.com

URL: <https://www.turbineone.com/>

Capabilities: TurbineOne's Frontline Perception System (FPS) automates multi-source intelligence fusion, accelerating intelligence operations and compressing the sensor-to-shooter cycle. FPS is next-generation threat recognition technology. It breaks precedent by offering an ML software platform that is edge-first, simple to use, and veteran-built for national security.

Key Features:

- Automated Target Recognition using all forms of ISR sensor data, including video, imagery (EO, IR, SAR), radar, RF, acoustics.
- No-Code ML Detection Model building and refinement (Edge/Cloud) by users in tactically relevant timelines (Minutes)

- Applies ML detection models to multiple sensor feeds simultaneously, reducing cognitive burden and optimizing analyst utilization.
- Hosts user built, GOTS, and COTS ML detection models in the FPS Model Library allowing for users to select and combine models to optimize workflows.
- Enables users to share ML detection models across intelligence and targeting enterprises building unity of effort across echelons of command.
- Near Real Time Alerts, Detection, Dissemination to any CIP/COP, Soldier Awareness System (i.e. TAK), or targeting system.

Company Name: Red One Alpha, LLC

POC: Larry Zabel, President larry@redonealpha.com

URL: <https://www.redonealpha.com>

Capability: True Offline Data Synchronization Software Application as part of an overall data orchestration strategy. We are open to a partnering arrangement as a small nontraditional SDVOSB/HUB Zone certified company for AIDP.

Company Name: Ozni AI, LLC

POC: Dominick Perini, Co-Founder, Dominick.Perini@ozniai.com

URL: www.ozni.ai

List of Capabilities: Ozni AI is a specialized engineering team producing AI-native battlefield sensors for a CPE IEW&S SBIR, and researching advanced SIGINT and GEOINT processing methods specifically for tactical-edge AI inference and low signature data exfiltration. Our primary specialty lies in intelligent sensor optimization and in-mission data triage using real-time tactical intelligence to tip & cue other systems. Our engineering products that would be of interest for AIDP include AI software for data fusion, unification, and federated sense-making all using MOSA. Please reach out to discuss partnerships on AIDP.

Company Name: Solid State Scientific Corporation

POC: Jonathan Kane

URL: www.solidstatescientific.com

List of Capabilities:

(1) Cloud Architecture and Design: IaaS, PaaS, DevSecOps, Agile, Data & APIs, ICAM, IAM, Sustainment, Virtual Workstation

(2) AI/ML - Processing of Radar and EO/IR using AI/ML

Company Name: Seaside Innovations

POC: Kati Hippleheuser

URL: <https://seasideinnovations.com/>

List of Capabilities:

Data Science, AI & Advanced Analytics

- Machine learning model development (classification, prediction, anomaly detection, NLP, semantic search)
- LLM integration, retrieval-augmented generation (RAG), embeddings, and vector database optimization
- Geospatial and multi-source data fusion analytics
- Statistical modeling, forecasting, and performance analysis
- Rapid prototyping of analytic tools and decision support systems
- Dashboarding, data visualization, and executive decision intelligence products

Data Engineering & Platform Development

- Data ingestion pipelines (ETL/ELT) for structured and unstructured data
- OpenSearch / Elasticsearch / Postgres / vector database implementation
- Large dataset ingestion, transformation, and indexing pipelines
- Containerized development environments and reproducible analytics workflows
- Database schema design and performance optimization
- API integration and backend data services

Intelligence & Operational Analysis

- All-source intelligence analysis, threat research, and multi-source fusion
- Geospatial and socio-cultural analysis
- Mission planning support and operational decision products
- Data interpretation and translation for senior leadership

Program Analysis & Technical Advisory Support

- Program performance analysis (cost, schedule, risk, and deliverables tracking)
- Technical evaluation of AI/analytics solutions for mission use cases
- Requirements analysis and capability gap assessment
- Executive briefings and decision support products
- Research and development program analytics

Strategic Partnership & Stakeholder Coordination

- Multi-organization coordination across government, industry, and research teams
- Technical integration support across parallel project efforts
- Meeting facilitation, working groups, and cross-team collaboration
- Technical documentation, presentations, and status reporting

Administrative & Mission Support (Cleared Environments)

- Technical reporting and monthly status reporting
- Documentation, records management, and deliverable tracking
- Operational workflow development and process improvement
- Support to government program offices and mission operations

Company Name: Rajant Corporation

POC:

Primary: Ed Preston (epreston@rajant.com)

Alternates:

Rob Castillo (rcastillo@rajant.com)

Cris Boyd (cboyd@rajant.com)

URL: [Rajant | Innovative Wireless Edge Network Solutions](#)

List of Capabilities:

1. Autonomous Mesh Networking (Kinetic Mesh?)

- Infrastructure-grade, peer-to-peer mobile mesh networking
- Self-forming, self-healing, and continuously adaptive routing
- Multi-frequency, multi-path communications across wired and wireless links
- Supports highly mobile and dynamic environments (vehicles, drones, personnel, sensors)
- Enables persistent connectivity in denied, degraded, or intermittent conditions
- Mesh-over-everything capability (RF, LTE/5G, Wi-Fi, satellite, fiber, etc.)
- APACE

Partner Value: Reliable transport layer for distributed systems and mobile operations.

2. Cloud-to-Edge Data Transport and Synchronization

- Continuous data movement across enterprise, tactical edge, and disconnected nodes
- Peer-to-peer and distributed data exchange without centralized dependency
- Edge autonomy with resynchronization upon reconnect
- Supports bandwidth-constrained and intermittent environments

Partner Value: Enables resilient data fabrics for edge computing and distributed applications.

3. Contested and Degraded Environment Operations

- Designed for electromagnetic spectrum congestion and interference
- No single point of failure architecture
- Operates without persistent backhaul or cloud access
- Maintains mission functionality during disruption

Partner Value: Assured communications where traditional networks fail.

4. Modular Open Systems Integration (MOSA-Aligned)

- Open interfaces for rapid integration with third-party systems
- Vendor-agnostic network transport layer
- Supports heterogeneous device ecosystems
- API-driven integration into larger platforms and architectures

Partner Value: Seamless interoperability with existing platforms, software stacks, and sensors.

5. Distributed Edge Compute Enablement

- Networking designed to support distributed processing at the edge
- Supports autonomous systems, robotics, and real-time analytics
- Enables collaborative machine-to-machine communication
- Foundation for decentralized data processing architectures

Partner Value: Enables scalable edge computing environments.

6. Mobility and Autonomy Networking

- High-performance communications for UAVs, UGVs, and autonomous platforms
- Dynamic routing across moving nodes
- Air-to-ground and ground-to-ground mesh connectivity
- Supports swarm, teaming, and distributed control architectures

Partner Value: Communications backbone for autonomous and robotic systems.

7. Cyber-Resilient Networking

- Multi-frequency / multi-waveform communications
- Secure peer-to-peer architecture with no centralized control dependency
- Supports zero-trust and multi-domain environments
- Hardened networking for mission-critical operations
- Designed for defense and critical infrastructure security requirements
- Instant and automatic failover in the presence of EW

Partner Value: Trusted networking foundation for sensitive operations.

8. Multi-Domain and Multi-Classification Support

- Enables data movement across operational domains and echelons
- Supports coalition and mission partner environments
- Flexible segmentation and access control

Partner Value: Facilitates joint and partner interoperability.

9. Rapid Deployment and Scalability

- Minimal infrastructure requirements
- Soldier/operator deployable
- Scales from small teams to large distributed enterprises
- Supports temporary, expeditionary, and persistent deployments

Partner Value: Fast fielding with minimal integration overhead.

10. Proven Operational Deployments

- Defense and government operations
- Industrial and critical infrastructure environments
- Autonomous and robotic platforms
- Large-scale mobile asset networks

Partner Value: Mature technology with real-world performance.

11. Collaboration and Integration Support

- Engineering collaboration for system integration
- Joint solution development and prototyping
- Test and demonstration support
- Architecture design assistance

Partner Value: Accelerated partner solution development.

12. Typical Integration Roles Rajant Can Fill

- Resilient transport layer
- Edge networking backbone

- Autonomous platform communications fabric
- Data synchronization infrastructure
- Disconnected operations enabler
- Mobile infrastructure replacement or augmentation

Company Name: Decisive LLC

POC: Jay McNallie | jay.mcnallie@decisivellc.us | 719-337-6428

URL: <https://www.decisivellc.us>

List of Capabilities:

- Distributed Data Framework: an operationally proven, open source data integration platform for C2 and ISR data
- Continuum: partition-tolerant, conflict free data replication and synchronization from cloud to edge

Company Name: Tactical Edge, INC.

POC: Peter Vitale / Peter.vitale@tacticaledge.us

URL: www.tacticaledge.us

List of Capabilities: Currently deployed on the JCM Marketplace with our FEDRAMP-Authorized SaaS Platform, Total Visibility Anywhere (TVA) -

<https://jtnc.experience.crmforce.mil/s/radio-products/a1dRw000000kJ4TIAU/total-visibility-anywhere-tva> / Phase III SBIR with similar functionality + ATO

Company Name: Evrim, Inc.

POC: Hannah Lensing, email - hannah@evrim.ai

URL: <https://evrim.ai/>

List of capabilities:

- Open source collection:
 - Automated open source collection through Evrim's distributed browser fleet (supports the access of geoblocked sites)

- Automated web source discovery through Evrim's scalable and distributed domain discovery and check-pointing
 - Browser automation for website navigation and interaction
- Data extraction and resolution:
 - LLM driven translation
 - Hybrid-Agentic data extraction and resolution to connect people, organizations, events and more - all automated and scaleable. Additional data types can be defined and extracted by customers
 - Multi-modal content processing (PDFs, images, etc.) with fine-tuned models on-prem
- Modeling:
 - Technology topic modeling to inform emerging technologies, novelty, and government + academic connections to driving these technology areas (specific focus on foreign technology development)
 - Graph-based analytics for networks extracted from documents
- **All capabilities can be integrated with through our APIs, MCPs, and SDKs

Company Name: Seekr Technologies

Point of Contact: Ryan Ward – 240.265.9973 – rward@seekr.com

Website: <https://www.seekr.com/government/defense/>

Core Capabilities:

- SeekrFlow – AI agent workbench specializing in creating finely-tuned, fit-for-purpose AI agents using domain knowledge never previously seen by foundational models and automated training data generation to streamline the process. Provides the ability to create your own multi-agentic applications that provide greater accuracy and transparency than traditional Government-deployed GenAI models.

Applicable Domain Applications:

- SeekrGuard – Gen AI Model evaluation capabilities assessing model fitness, bias, accuracy, and reliability. Provides transparent risk scoring, flexible testing,

custom evaluation capabilities that go beyond basic industry benchmarks, continuous safeguards, and audit-ready governance.

- SeekrIntel – Army INSCOM backed multi-agentic intel support application that converts raw data into actionable intelligence in seconds. AI agents enhance human intuition by extracting and enhancing raw multi-modal data, and generating and scoring hypotheses that uncover hidden relationships to assist in mapping adversary, criminal, terrorist, financial, and supply chain networks.
- SeekrCyber – Automates end-to-end cybersecurity exploitation and penetration testing, delivering faster, more accurate, and scalable multi-agent red-teaming.
- Seekr RedLeader – An agentic framework that ingests code and related vulnerability scan results, conducts assessments of severity impacts using graph networks to prioritize true vulnerabilities over “false positive” alerts, and constructs, tests, and documents potential exploits for hardening—saving significant analyst time while providing leadership-ready explainability.
- Seekr Content Orchestration – Generates policy, doctrine, and training content with consistent, auditable updates and propagates approved changes enterprise-wide to maintain synchronization across documentation.
