Integrated Battlespace Simulation & Test Department (IBST)

CUI Category:

CTI, EXPT Distribution/Dissemination Control:

Distribution Statement D

POC: Digital Analytics, infrastructure, and Technology Advancement (DAiTA) Group's
Integrated Battlespace Simulation & Test Department (IBST)

DISTRIBUTION STATEMENT D: Distribution authorized to the Department of Defense and U.S. DoD Contractors only; Controlled Technical Information; 05 March 2026. Other requests shall be referred to the Battlespace Division, Integrated Battlespace Simulation & Test Department (IBST) Patuxent River, MD 20670.

WARNING -This document contains technical data whose export is restricted by the Arms Export Control Act (Title 22, U.S.C., Sec 2751, et seq.) or the Export Control Reform Act of 2018 (Title 50, U.S.C., Chapter 58, Sec. 4801-4852). Violations of these export laws are subject to severe criminal penalties. Disseminate in accordance with provisions of DoD Directive 5230.25.

CUI

05 MARCH 2026

1.0 Scope

The Integrated Battlespace Simulation and Test (IBST) Department, Naval Air Warfare Center (NAWCAD) – Battlespace Division, is the Naval Air Systems Command's (NAVAIR) center of excellence for Modeling and Simulation (M&S) of the battlespace environment. The Battlespace Division is one of three divisions within IBST. The Battlespace Division is responsible for providing specialized simulation expertise. Its principal mission is the development of advanced products and capabilities that model naval aviation systems and the complex, dynamic battlespace environment in which they operate. Distributed simulation, and Live-Virtual-Constructive (LVC) events are used throughout the acquisition lifecycle to reduce risk and improve the quality of naval aviation systems. The Battlespace Division researches, designs, develops, implements, deploys, and maintains software applications, advanced real-time simulations, real-time interfaces, and tools to support battlespace and distributed simulations. The division conducts requirements analysis, test and evaluation, and trainer/training application developments across the Department of Defense (DoD) and for Foreign Military Sales (FMS) customers.

The principal product developed and maintained by the Battlespace Division is the Next Generation Threat System (NGTS). NGTS is a synthetic warfare environment generator used to support training, testing, analysis, and research and development. NGTS models threat and friendly aircraft, ground and surface platforms, and their corresponding weapons and subsystems. NGTS is currently installed in multiple DoD training systems, distributed exercise centers, and international military training environments. Other distributed simulation products developed and maintained by the Battlespace Division include the Architecture Management Integration Environment (AMIE), Global Reusable Interface Domain (GRID), Weapons Server Common Environment (WSCE), Simulation Control Executive (SCE), Analysis and Reporting Tool (ART), Battlespace Environment Audio Video Event Recorder (BEAVER), and the Shared Package Manager (SPM). Furthermore, support is provided for standard protocols enabling battlespace simulation. These include Distributed Interactive Simulation (DIS), High Level Architecture (HLA), Test and Training Enabling Architecture (TENA), and the Joint Simulation Environment (JSE) Government Simulation Interface (GSI).

This Performance Work Statement outlines tasking for research, design, development, and associated engineering to meet battlespace and distributed simulation requirements. The Contractor shall provide support that includes the research, development, and maintenance of simulation tools; the application of these tools to specific customer requirements; the research and development of warfare scenarios; the development and integration of entity models and behaviors; and ongoing support for all products delivered by the Battlespace Division. While Sensitive Compartmented Information (SCI) is a component of each task area, it is stipulated that none of the deliverables shall contain SCI.

Typical tasking under this PWS includes:

- Develop a representative simulated battlespace environment and tools for test and evaluation and training for Department of the Navy (DoN) and DoD programs.
- Research, development, integration, and test of next generation M&S technologies.
- Develop high fidelity models and simulations to support major acquisition program analysis of requirements.
- Develop new models and simulations of existing red and blue force environments, weapons systems, and tactics.
- Provide physical security and access control for Battlespace Division and IBST Department spaces.
- Conduct configuration management for in-house developed applications.
- Develop training products for in-house developed applications.
- Create DevOps scripts/processes and SPM for customer installation of in-house developed applications.

CUI

- Generate technical documentation for in-house developed applications.
- Distribute/monitor licenses and in-house developed applications and documents.
- Provide business operations and office managerial tasks.

This PWS defines the overall scope required to support the contract. Individual Orders (i.e., Task Orders (TO) or Delivery Orders (DO)) shall specify tasking.

2.0 Applicable Documents

The Contractor shall conform to applicable DoD, DoN, and IBST procedures and standards in the performance of this contract. The Contractor shall comply with the most current version of all applicable security standards and procedures.

2.2.8	NMCARS Annex 16 (Change 26-01)	Annex 16 – Statement of Work Language Implementing “The DIB” Memo

3.0 Requirements**3.1 General Requirements****3.1.1 Compatibility**

The Contractor shall maintain the capability to prepare documents and software packages compatible with the Government Information Technology (IT) environment through the security classification of Collateral SECRET. The Contractor shall supply approximately 15 contractor-owned computers for use during onboarding of new contractor personnel. These assets are to be used for initial training and familiarity and shall not be used for the performance of sensitive development under this PWS. The Contractor shall update software versions as required for security or maintenance. The Contractor shall maintain the ability to interface with and transfer data to and from office software applications and their upgraded versions. The Contractor shall maintain state of the art anti-virus software and ensure that all media are virus free when delivered. The Contractor shall be capable of Internet and email communications with the IBST Department. Contractor personnel shall be capable of maintaining real-time communications, both voice and data transfer capabilities, with the IBST Department, during working hours whether at Contractor work site or an alternate work site.

3.1.2 Work Locations

3.1.2.1 Government Location

Approximately 30% of the work will be performed at the Government site located in Patuxent River, MD, 70% will be performed at the Contractor site(s) as defined in Section 3.1.2.2 for work at the SECRET or UNCLASSIFIED level. The Government will provide access to workspaces, telephones, printers, facsimile machines, copy machines, shredders, computers, and network access including web servers and applicable databases or other applications necessary for contractors to carry out assigned tasks on-site. Exact definition of tasking locations between Government site, contractor facilities inclusive of subcontractors, and telework, will be mutually agreed to at the Order level.

3.1.2.2 Contractor Location

The Contractor shall provide at least one facility within 20 miles driving distance of NAS Patuxent River that includes a GENSER Secret level laboratory space with at least 3000 ft² of space and a Government or Contractor owned Secret level network with a minimum of 30 workstations within 90 days of award. A listing of Government Furnished Property (GFP) to be made available to the Contractor at contractor facility(s) can be found in the Wide-Area Workflow GFP Module. The Government shall provide Unclassified and Classified Research, Development, Test, & Evaluation (RDT&E) computers and computer network connectivity for off-site contractors providing direct full-time technical support that require RDT&E network access. The contractor facility(s) shall support the prime contractor and associated subcontractors as well as provide temporary work locations for Government personnel and other Government CSS support specific program RDT&E requirements.

The Contractor shall have the capability to host and conduct meetings in support of the tasking outlined in this PWS at classification levels from unclassified up to the GENSER secret level with the capacity to support a minimum of 10 persons and have contractor furnished telephone and VTC capability as well as sufficient equipment to conduct meetings with presentations including compatible software as required in Paragraph 3.1.1. The Contractor shall provide this support at the Contractor's location.

3.1.2.3 Alternate Work Site

The Contractor may allow employees to telework with approval from the COR, in writing, that a position's tasking is eligible for telework. The Contractor may utilize alternate worksites/locations and telework to support continued performance of PWS tasks in accordance with company policy. When utilizing telework, the Contractor remains responsible for task order performance.

3.1.3 Contract Status Reports

The Contractor shall provide the following documentation:

3.1.3.1 Program Financial Summary Report

The Contractor shall provide a monthly contract financial status report in accordance with the Contract Data Requirement List (CDRL) A001.

3.1.3.2 Monthly Progress Report:

The Contractor shall provide a monthly progress report in accordance with CDRL A0002.

3.1.3.3 Contractor Personnel Locator Report:

The Contractor shall provide a monthly Contractor Personnel Locator Report in accordance with CDRL A003. Note: This CDRL also satisfies the reporting requirements identified in CTXT.204-9502, Requirements for Local Security System (NAVAIR)

3.1.3.4 Government Property Report

The Contractor shall provide a monthly Government Property Report in accordance with CDRL A004.

3.1.3.5 Transition In Plan

The Contractor shall submit a Transition In Plan, to include the minimum elements listed in CDRL A005.

3.1.3.6 Transition Out Plan

The Contractor shall submit a Transition Out Plan, to include the minimum elements listed in CDRL A006.

3.1.4 Work Schedules

3.1.4.1 Primary Work Schedule

The Contractor shall provide the required services and staffing coverage during normal working hours. Normal working hours are usually 8.5 hours (including a 30-minute lunch break) encompassing the core hours of 0900-1500 each Monday through Friday (except on the legal holidays specified in paragraph 3.1.4.4).

3.1.4.2 Compressed Work Schedule (CWS)

CWS is an alternative work schedule to the traditional five 8.5 hour workdays (which includes a 30-minute lunch) worked per week. Under a CWS schedule, an employee completes the following schedule within a two-week period of time: Eight weekdays are worked at 9.5 hours each (which includes a 30-minute lunch), one weekday is alternately worked as 8.5 hours (which includes a 30-minute lunch) and one weekday is not worked by the employee. The result is 80 hours worked every two weeks, with 44 work hours one week and 36 work hours the other.

The Contractor may allow its employees to work a CWS schedule provided the requirements of this PWS are met. If the Contractor chooses to allow its employees to work a CWS schedule in support of this contract, any additional costs associated with the implementation of the CWS schedule vice the standard schedule are unallowable costs under this contract and will not be reimbursed by the Government. Additionally, the CWS schedule shall not prevent Contractor employees from providing necessary staffing and services coverage as required by the Government to the ACOR/COR.

3.1.4.3 Shift Work Schedule

The Contractor must be prepared to conduct operations in shifts to accommodate specific mission requirements, emergency situations, or to minimize interference with other Government activities to meet the requirements of this PWS. The establishment or alteration of shift schedules requires prior written approval from the COR to ensure alignment with operational needs and to prevent disruption of Government functions.

3.1.4.4 Holidays

The Government observes the Federal holidays identified on the Office of Personnel Management (OPM) website: <https://www.opm.gov/policy-data-oversight/pay-leave/federal-holidays/>. With the exception of the events in section 3.1.4.5 below, the Contractor is permitted to observe Federal holidays in accordance with its corporate policy.

3.1.4.5 Installation Closures

The Contractor shall follow their parent company's policies when Federal facilities are closed by the Government, or when Federal employees are officially excused from work due to a holiday, special event, severe weather, security threat, or any other Government facility related event that prevents Federal personnel from working at the Government facility.

Generally, contractor personnel may not perform work on-site at a Government facility without Federal personnel present. However, in limited circumstances, the work performed by contractor personnel is considered mission essential and the Contracting Officer may authorize the contractor to perform work at the Government facility when the facility is closed for normal operations. Mission essential work efforts typically include work efforts related to public health, safety, or matters related to national security. Mission essential services, if any, may be identified at the Order level.

3.1.4.6 Overtime

Overtime as defined in this contract refers to hours worked by a Contractor employee in excess of the employee's normal workweek, which exceed the employee's scheduled 80 hours for a two week time period. When support requirements outside normal working hours occur, the Contractor shall ensure qualified personnel are available to support the requirements. Overtime is authorized under this contract to the extent specified in individual task orders, provided COR approval is obtained in advance. The COR may provide concurrence for overtime on a task, event, program, project, or general function basis. The total cost for overtime over the life of the contract cannot exceed the amount specified in clause 52.222-2 Payment for Overtime Premiums unless first approved in writing by the Chief of the Contracting Office, in accordance with FAR 22.103-4 and NMCARS 5222.103-4.

3.1.5 Subcontractor

The contractor shall clearly and effectively communicate the requirements in this PWS to its subcontractors. Additionally, consultants supporting the contractor are also considered subcontractors.

3.1.6 Management of Contractor Personnel

The contractor shall manage its employees' tasking, performance, and work schedules. The Government will not supervise, assign tasks to contractor employees, or otherwise imply that the Government may direct contractor personnel.

3.1.7 Policies

In the performance of this contract, the Contractor shall utilize all appropriate IBST and Battlespace Division Standard Operating Procedures, policies, desk guides, etc. as defined by the TPOC and/or COR at the Order level.

3.1.8 Data Rights

The Government will retain ownership of all source data (including code, data, and other source files) for tasking performed under Task Orders under this PWS. The Government will remain the Configuration Management (CM) authority for all aforementioned source data. Data rights for Delivery Orders may be negotiated at the Delivery Order level.

3.1.9 Transition In Plan

The incoming Contractor's overall transition-in strategy shall be focused on the complete and efficient assumption of program/division responsibilities with no degradation in mission performance. The primary objectives are to ensure that all critical data and institutional knowledge are successfully captured and to establish full operational capability by the end of the transition period. The incoming contractor will work in close partnership with the outgoing contractor and Government personnel to facilitate a transparent and orderly transfer of duties. The Contractor shall submit a Transition In Plan, to include the minimum elements listed below in accordance with CDRL A005.

- **Work Assumption.** The Contractor shall provide a plan to effectively receive and assume all tasked work that is in process from the outgoing contractor. This includes reviewing current work products and confirming the status of all deliverables. The Contractor shall actively participate in weekly status meetings to engage with the outgoing contractor, ask clarifying questions, and ensure a comprehensive understanding of all ongoing tasks.

- **Quality Assurance Integration.** The Contractor shall provide a plan of action to understand and integrate the existing quality review processes. The goal is to ensure the seamless continuation of these processes from day one of the new contract period. This plan will involve reviewing the outgoing contractor's quality assurance procedures and mapping them to the incoming contractor's internal standards to guarantee undiminished quality.
- **Risk Mitigation Strategies.** The Contractor shall provide a plan of action to identify and mitigate risks associated with the assumption of contract performance. This includes risks related to knowledge gaps, data integrity, and schedule alignment. The plan shall outline procedures for early identification of potential issues and pre-planned responses to ensure that quality and schedule are maintained throughout the transition period.
- **Data/Information Reception.** The Contractor shall provide a plan for the efficient receipt, inventory, and validation of all program data from the outgoing contractor. This includes creating a comprehensive checklist to ensure all specified data, documentation, and system access are successfully transferred and fully functional.

3.1.10 Transition Out Plan

The Contractor's overall transition-out strategy shall be built around maintaining the mission of the program/division with minimal impact, not only in terms of timeliness of performance but also to ensure that critical data and knowledge transfer occurs. The contractor shall ensure an orderly transition of responsibilities, while minimizing impact on operations prior to the termination or expiration of the contract. The Contractor shall submit a Transition Out Plan, to include the minimum elements listed below in accordance with CDRL A006.

- **Work Turnover.** The Contractor shall provide a plan of action to effectively transfer tasked work that is in process at the expiration or termination of the contract to the successor company. The Contractor shall establish and maintain effective communication with the incoming contractor or Government personnel for the period of transition via weekly status meetings.
- **Quality Assurance.** The Contractor shall provide a plan of action to ensure continuation of quality review processes during the transition period to the successor company.
- **Risk Mitigation Strategies.** The Contractor shall provide a plan of action to mitigate contract performance risks (quality and schedule) encountered during the transition period.
- **Data/Information Transfer.** The Contractor shall provide a plan of action for the efficient inventory and transfer of program data to the successor company.

3.2 Security Requirements

3.2.1 Citizenship Requirements

Only U.S. citizens may perform work under the contract, unless waived. If the Contractor cannot find qualified U.S. citizens to perform the work, the Contractor shall submit a citizenship waiver request with justification to the Government Security Office. The waiver request should include:

- a. The individual's name, date and place of birth, position title, and current citizenship.
- b. A statement that a qualified U.S. citizen cannot be hired in sufficient time to meet the contractual requirements.
- c. A statement of the unusual expertise possessed by the applicant.
- d. A statement that access will be limited to a specific government contract (specify contract number).
- e. A statement that the Contractor has obtained an export license for the information required to perform the contract.

3.2.2 Investigative Requirements

All Contractor personnel shall maintain security clearance eligibility commensurate with the level of classification of the work performed as annotated in the Contract's DD-254, Contract Security Classification Specification Form (Attachment X), unless granted a waiver due to citizenship as specified in Section 3.2.1.

To perform the requirements of this PWS, Contractor personnel shall require access to classified information up to and including TOP SECRET/Sensitive Compartmented Information with a safeguarding level of None. The Contractor shall ensure that its personnel receive the requisite investigation and are favorably adjudicated in accordance with National Industrial Security Program Operating Manual (NISPOM) codifying 32 CFR Part 117 and SECNAVINST 5510.30C before performing any tasking in this PWS. Contractor employees who fail to meet security clearance requirements are not eligible to perform any of the tasking in this PWS.

The Contractor shall comply with security requirements specified in the DD-254 attached to the contract. The Contractor shall handle all information or data that the Contractor access at the appropriate classification level. Unclassified information shall be handled in accordance with the appropriate designation (Controlled Unclassified Information; Covered Defense Information). Distribution is authorized to the Requiring Office's Organization and supported Activity only. Other requests for deliverables under the contract shall be referred to the TPOC/COR of the contract for approval. Additional investigative requirements apply for all personnel supporting TS/SCI tasking; reference Section 3.2.10.

3.2.3 Access Requirements

3.2.3.1 SAAR

Contractor personnel who require access to Government IT systems shall have an approved SAAR-N – System Authorization Access Request Navy form, OPNAV 5239/14, on file per CTXT.204-9505 SYSTEM AUTHORIZATION ACCESS REQUEST NAVY (SAAR) REQUIREMENTS FOR INFORMATION TECHNOLOGY (IT) (NAVAIR), and complete required Annual Information Awareness/Cyber Security Training before access is granted to operate IT systems and networks in accordance with NAVADMIN 259/23. New employees must submit their SAAR forms within thirty (30) days of their first day of work.

3.2.3.2 CAC/Local Badges/PKI Tokens

The Government will issue Contractor CACs and facility specific identification badges to on-site Contractor personnel who require base facility access. Contractor personnel shall ensure that identification badges are visible at all times while personnel are at the Government site. The Contractor shall furnish all requested information required to facilitate issuance of identification badges and shall comply with NASPAXRIVINST 5510.15 (series). The Contractor shall return CACs and identification badges issued to Contractor employees to the Government Security Department issuing the credential following completion of the contract, relocation, or termination of an employee, or upon request from the COR. The Government will provide the Contractor access to Government facilities, as required, for performance of tasks under this PWS. Contractor personnel shall comply with the applicable security procedures and regulations for assigned facilities. Public Key Infrastructure (PKI) tokens, such as Alternative Tokens and Secret Internet Protocol Router Network (SIPRNet) tokens, shall be handled in accordance with DoDI 8520.02.

3.2.3.3 DD-254 (Attachment X)

The Contractor shall comply with security requirements as specified in the DD-254, Attachment X to the contract. The Contractor shall handle information or data that the Contractor accesses at the appropriate classification level. The Contractor shall handle unclassified information as “Controlled Unclassified Information (CUI).” Distribution is authorized to the Requiring Office’s Organization and supported Activity only. Other requests for deliverables under this contract shall be referred to the COR of this contract for approval.

CUI information generated and/or provided under this contract shall be marked and safeguarded as specified in DODM 5200.01 – DoD Information Security Program: Controlled Unclassified Information (CUI) Vol. 4 (enclosure 3 pages 11-18) available at https://www.dodig.mil/Portals/48/Documents/Policy/520001_vol4.pdf.

3.2.4 Information Security (INFOSEC)

The Contractor shall implement and maintain security procedures and controls to prevent unauthorized disclosure of classified information and CUI and to control distribution of CUI in accordance with the National Industrial Security Program Operating Manual (NISPOM) codifying 32 CFR Part 117, SECNAVINST 5510.36B – DoN Information Security Program, and DoDI 8582.01. If the work is performed at the Government's facility, the Contractor personnel shall comply with instructions/guidance provided during facility security training.

The Contractor shall protect information at the TS/SCI level in accordance with DoDI 5200.01 DoD Information Security Program and Protection of Sensitive Compartmented Information (SCI).

3.2.4.1 Marking

The Contractor shall properly mark information it generates. The Contractor shall mark and safeguard CUI, including Covered Defense Information (meeting the definition of 48 CFR 252.204–7012(a)), generated and/or provided under this contract as specified in DoDI 5200.48, Controlled Unclassified Information (CUI) available at <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/520048p.PDF>. The Contractor shall also properly mark technical information with appropriate Distribution Statements and Export Control warnings in accordance with 32 CFR Part 117, SECNAVINST 5510.36B – DoN Information Security Program, and individual program security classification guidance as applicable. The Contractor shall assign a distribution statement (distribution statements B through F) to products that contain Covered Defense Information using the criteria set forth in DODI 5230.24 Distribution Statements on Technical Documents; and have this statement displayed per DODI 5230.24, Enclosure 3.

3.2.4.2 Public Release for Classified and Unclassified Information:

The Contractor shall not release information pertaining to this PWS or contract for public dissemination. Public dissemination includes posting to any social media, Contractor websites, trade publications etc., unless it has been approved for public release by the appropriate U.S. Government authority. The Contractor shall submit proposed public releases to the COR for initial approval and awareness. Upon COR approval, the Contractor shall submit its proposed public release through the NAWCAD Procuring Contracting Officer, and to the Public Affairs Office, NAWCAD, navairpao@us.navy.mil, 301-757-5136. The Contractor shall not publicly release the information until it receives PCO and PAO approval, in writing.

3.2.4.3 Loss, Compromise, and/or Electronic Spillage of Classified or Controlled Unclassified Information

The Contractor shall report instances of loss, compromise and electronic spillage of classified or controlled unclassified information to the COR, TPOC, and Government Security Office within 24 hours of the incident occurring under this IDIQ.

3.2.4.4 System Security Plan and Plans of Action and Milestones (SSP/POAM) Reviews

In accordance with NMCARS Annex 16,

- a. Within thirty (30) days of contract award, the Contractor shall make its System Security Plan(s) (SSP(s)) for its covered contractor information system(s) available for review by the Government at the contractor's facility. The SSP(s) shall implement the security requirements in Defense Federal Acquisition Regulation Supplement (DFARS) clause 252.204-7012, which is included in this contract. The Contractor shall fully cooperate in the Government's review of the SSPs at the Contractor's facility.
- b. If the Government determines that the SSP(s) does not adequately implement the requirements of DFARS clause 252.204-7012 then the Government shall notify the Contractor of each identified deficiency. The Contractor shall correct any identified deficiencies within thirty (30) days of notification by the Government. The contracting officer may provide for a correction period longer than thirty (30) days and, in such a case, may require the Contractor to submit a Plan of Action and Milestones (POA&M) for the correction of the identified deficiencies. The Contractor shall immediately notify the contracting officer of any failure or anticipated failure to meet a milestone in such a POAM.

CUI

- c. Upon the conclusion of the correction period, the Government may conduct a follow-on review of the SSP(s) at the Contractor's facilities. The Government may continue to conduct follow-on reviews until the Government determines that the Contractor has corrected all identified deficiencies in the SSP(s).
- d. The Government may, in its sole discretion, conduct subsequent reviews at the Contractor's site to verify the information in the SSP(s). The Government will conduct such reviews at least every three (3) years (measured from the date of contract award) and may conduct such reviews at any time upon thirty (30) days' notice to the Contractor.

3.2.4.5 Compliance to NIST 800-171

In accordance with NMCARS Annex 16,

- a. The Contractor shall fully implement the CUI Security Requirements (Requirements) and associated Relevant Security Controls (Controls) in NIST Special Publication 800-171 (Rev 3.) (NIST SP 800-171), or establish a SSP(s) and POA&Ms that varies from NIST 800-171 only in accordance with DFARS clause 252.204-7012(b)(2), for all covered Contractor information systems affecting this contract.
- b. Notwithstanding the allowance for such variation, the Contractor shall identify in the SSP and POA&M their plans to implement the following, at a minimum:
 - 1. Implement Control 3.5.3 (Multi-factor authentication). This means that multi-factor authentication is required for all users, privileged and unprivileged accounts that log into a network. In other words, any system that is not standalone should be required to utilize acceptable multi-factor authentication. For legacy systems and systems that cannot support this requirement, such as CNC equipment, etc., a combination of physical and logical protections acceptable to the Government may be substituted;
 - 2. Implement Control 3.1.5 (least privilege) and associated Controls, and identify practices that the Contractor implements to restrict the unnecessary sharing with, or flow of, covered defense information to its subcontractors, suppliers, or vendors based on need-to-know principles;
 - 3. Implement Control 3.1.12 (monitoring and control remote access sessions) - Require monitoring and controlling of remote access sessions and include mechanisms to audit the sessions and methods;
 - 4. Audit user privileges on at least an annual basis;
 - 5. Implement:
 - i. Control 3.13.11 (FIPS 140-2 validated cryptology or implementation of NSA or NIST approved algorithms (i.e. FIPS 140-2 Annex A: AES or Triple DES) or compensating controls as documented in a SSP and POAM); and,
 - ii. NIST Cryptographic Algorithm Validation Program (CAVP) (see <https://csrc.nist.gov/projects/cryptographic-algorithm-validation-program>);
 - 6. Implement Control 3.13.16 (Protect the confidentiality of CUI at rest) or provide a POAM for implementation which shall be evaluated by the Navy for risk acceptance.
 - 7. Implement Control 3.1.19 (encrypt CUI on mobile devices) or provide a plan of action for implementation which can be evaluated by the Government Program Manager for risk to the program.

3.2.5 Operational Security (OPSEC)

The Contractor shall develop, implement, and maintain an OPSEC program to protect controlled unclassified and classified activities, information, equipment, and material used or developed by the Contractor and any subcontractor during performance of the contract. The Contractor shall be responsible for the subcontractor's implementation of the OPSEC requirements. This program may include Information Assurance and Communications Security (COMSEC). The OPSEC program shall be in accordance with National Security Decision Directive (NSDD) 298, and at a minimum shall include:

CUI

- a. Assignment of responsibility for OPSEC direction and implementation.
- b. Issuance of procedures and planning guidance for the use of OPSEC techniques to identify vulnerabilities and apply applicable countermeasures.
- c. Establishment of OPSEC education and awareness training.
- d. Provisions for management, annual review, and evaluation of OPSEC programs.
- e. Flow down of OPSEC requirements to subcontractors when applicable. The Contractor shall comply with facility OPSEC program instructions and contribute to organization-level OPSEC efforts while performing aboard NAVAIR or NAVAIR sites. The Contractor shall include OPSEC as part of its ongoing security awareness program and take all required Agency training. The Contractor shall be responsive to the Supporting OPSEC Manager on a non-interference basis. The Contractor shall protect sensitive unclassified information and activities, which could compromise classified information or operations, or degrade the planning and execution of operations performed by the RO and Contractor in support of the mission.
- f. The Contractor shall develop, implement, and maintain an OPSEC plan (CDRL A007) to protect classified and sensitive information to be used at a Contractor's and subcontractor's facilities during the performance of this contract. The Contractor is responsible for ensuring subcontractor implementation of the OPSEC program requirements for this contract.

3.2.6 Anti-Terrorism Force Protection and Emergency Management

Anti-Terrorism Force Protection and Emergency Management: It is not anticipated that the work performed on this contract will be Emergency Essential in accordance with OPNAV 3440.17A and Government Emergency Management, Antiterrorism and/or Continuity of Operations Plans. Contractor personnel shall comply with all Government Emergency Management, Antiterrorism and/or Continuity of Operations Plans and directives. Unless otherwise authorized in accordance with section 3.1.4.5, Contractor personnel shall not report for work at Government facilities upon declaration of Force Protection Condition CHARLIE or in any event or emergency where Government officials direct curtailment of operations to "Mission Essential Only". All contractor personnel assigned to a Government facility shall complete annual Antiterrorism (Level One) and Active Shooter training.

3.2.7 Communications Security (COMSEC)

Contractor personnel may be required to access COMSEC material. The Contractor personnel shall follow National Security Agency/Central Security Service Manual 3-16 "Control of Communications Security (COMSEC) Material" August 5, 2005 in the control and protection of COMSEC material/information at their facilities. When access is required at Government facilities, contractor personnel will adhere to COMSEC rules and regulations as mandated by National Industrial Security Program Operating Manual (NISPOM) codifying 32 CFR Part 117, Department of the Navy Communications Materials System (CMS-1A) and Command policy and procedures.

3.2.8 Cyber Security

The Contractor, and all subcontractors, shall comply with the policies, procedures, and responsibilities outlined in the most current version of OPNAVINST 5239.1E, U.S. Navy Cybersecurity Program. The Contractor shall include specific provisions to ensure the safeguarding of all information and data residing on or passing through contractor-owned or operated systems.

3.2.9 Cyber Incident Response

In accordance with NMCARS Annex 16,

- a. The Contractor shall, within fifteen (15) days of discovering the cyber incident (inclusive of the 72-hour reporting period), deliver all data used in performance of the contract that the Contractor determines is impacted by the incident and begin assessment of potential warfighter/program impact.
- b. Incident data shall be delivered in accordance with the Department of Defense Cyber Crimes Center (DC3) Instructions for Submitting Media available at

http://www.acq.osd.mil/dpap/dars/pgi/docs/Instructions_for_Submitting_Media.docx. In delivery of the incident data, the Contractor shall, to the extent practical, remove contractor-owned information from Government covered defense information.

- c. If the Contractor subsequently identifies any such data not previously delivered to DC3, then the Contractor shall immediately notify the Contracting Officer in writing and shall deliver the incident data within ten (10) days of identification. In such a case, the Contractor may request a delivery date later than ten (10) days after identification. The Contracting Officer will approve or disapprove the request after coordination with DC3.

3.2.10 Naval Criminal Investigative Service (NCIS) Outreach

The Contractor shall engage with NCIS industry outreach efforts and consider recommendations for hardening of covered contractor information systems affecting DON programs and technologies, in accordance with NMCARS Annex 16.

3.2.11 NCIS/Industry Monitoring

- a. In the event of a cyber incident or at any time the Government has indication of a vulnerability or potential vulnerability, the Contractor shall cooperate with the Naval Criminal Investigative Service (NCIS), which may include cooperation related to: threat indicators; pre-determined incident information derived from the Contractor's infrastructure systems; and the continuous provision of all Contractor, subcontractor or vendor logs that show network activity, including any additional logs the Contractor, subcontractor or vendor agrees to initiate as a result of the cyber incident or notice of actual or potential vulnerability.
- b. If the Government determines that the collection of all logs does not adequately protect its interests, the Contractor and NCIS will work together to implement additional measures, which may include allowing the installation of an appropriate network device that is owned and maintained by NCIS, on the Contractor's information systems or information technology assets. The specific details (e.g., type of device, type of data gathered, monitoring period) regarding the installation of an NCIS network device shall be the subject of a separate agreement negotiated between NCIS and the Contractor. In the alternative, the Contractor may install network sensor capabilities or a network monitoring service, either of which must be reviewed for acceptability by NCIS. Use of this alternative approach shall also be the subject of a separate agreement negotiated between NCIS and the Contractor.
- c. In all cases, the collection or provision of data and any activities associated with this performance work statement shall be in accordance with federal, state, and non-US law.

3.2.12 Additional Security Requirements

3.2.12.1 TS/Sensitive Compartmented Information:

This contract includes Sensitive Compartmented Information performance requirements. These requirements include access to SCI materials and information and do not include SCI deliverables. The Contract shall require access to threat intelligence information and other SCI for the purpose of developing accurate simulated and stimulated battlespace environmental conditions and conducting of aircraft test and evaluation in relation to the environments and on aircraft systems operating at the SCI level.

All Contractor personnel supporting SCI requirements must obtain a TOP SECRET clearance with a fully adjudicated investigation in accordance with Intelligence Community Directive (ICD) 704 prior to starting any SCI level work. As a further enhancement to security measures, for the protection of classified information, the Contractor agrees to permit necessary polygraph interviews on Contractor personnel having access to National Security Information (NSI) under this contract. The polygraph interview will be limited to counterintelligence (CI) and counterespionage (CE) issues.

Should TS/SCI information be approved for access at an accredited non-Governmental facility, it must be done in accordance with DoDM 5105.21, Volumes I-III.

All DoN contractors with SCI access must be briefed into North Atlantic Treaty Organization (NATO) Secret access, in accordance with Director of National Intelligence Memorandum 5 May 2017, Access to North Atlantic Treaty Organization (NATO) Information by Intelligence Community (IC) Personnel and Naval Intelligence Security Policy Directive 17-008 Revision, Mandate for North Atlantic Treaty Organization (NATO) information by Intelligence Community (IC) Personnel.

3.2.12.2 Special Access Programs

The Contractor may require Special Access Programs (SAP) access in accordance with the DD-254.

3.2.12.3 Special Network Access

The Contractor shall require access to special networks in the performance of this requirement in accordance with the DD-254.

3.3 Detailed Support Requirements

IBST provides integrated testing of aircraft systems during the acquisition's engineering / development phases. IBST's simulated flight environments allow systems-of-systems to be thoroughly tested as they would during flight operations. Systems can be tested with "Hardware-In-The-Loop" (HWIL) allowing aircraft hardware or software to be fully integrated and electronically stimulated without ever leaving the ground. Any level of HWIL software or hardware ground testing can be performed through use of Live, Virtual, Constructive (LVC) M&S techniques. Models range in complexity from the simplistic to fully validated Digital Systems Models (DSM) of complex avionics systems and subsystems, including systems and circuitry for HWIL testing. The Contractor shall research, analyze, develop, integrate, test, and maintain avionic, aerodynamic, tactical and other mission capable simulation models, databases, and tools for IBST.

3.3.1 Development and Engineering Support

The Contractor shall:

3.3.1.1 Battlespace Environment Modeling

Perform research, design, development, modification, testing, and operation of simulated environment models. Tasks include, but are not limited to:

- Perform research, develop, interface, and operate warfare simulation environments.
- Develop Battlespace simulation environment models through independent research and analysis of data from sources such as the Electronic Warfare Integrated Reprogramming Database (EWIRDB).
- Virtual environmental database modeling, to include the construction and maintenance of complex virtual environments in multi-spectral display formats. These virtual environments shall be correlated with other complex software systems for the purpose of distributed missions and exercises of a similar nature.
- Develop simulated environments for use in operator-in-the-loop real-time test and/or training environments.
- Develop and integrate weather environment models and the effect of weather on entities, weapons, communications, and sensors.
- Develop Battlespace simulation operation and visualization graphical user interfaces.
- Support and operate multi-site mission level simulation exercises.
- Test, analyze, evaluate, and report on Battlespace simulation software, models, and test events.
- Integrate and interface with third party models, systems, and servers.

Battlespace Environment Modeling efforts contribute to the development of multiple products, including but not limited to:

- NGTS
- WSCE
- GRID

3.3.1.2 Multi-Domain Systems Modeling

Perform research, design, development, integration, and testing of simulation models of air platforms, surface platforms, ground platforms, subsurface platforms, sensor systems, communications systems, datalinks, identification systems, and weapons systems. Tasks include, but are not limited to:

- Develop Battlespace simulation entity models through independent research and analysis of data from sources such as the Electronic Warfare Integrated Reprogramming Database (EWIRDB).
- Research, develop, test, and evaluate mission system models for Electronic Warfare Systems, Sensor Fusion, Countermeasures Effectiveness, Software Validation, Interoperability of System/ Subsystem/Components, Workload Measurement, and Flight Test Refinement.
- Software modeling for models of remote sensing devices, such as Radar, Forward-Looking Infrared (FLIR), Electro-Optical (EO), Synthetic Aperture Radar (SAR), Inverse Synthetic Aperture Radar (ISAR), Radio Frequency (RF) sensors, and Infrared (IR) sensors.
- Software modeling for munitions models, such as missiles, bombs, bullets, and countermeasures. To include modeling of sub-components, such as seekers as applicable.
- Model development, modification, and integration into a battlespace environment.
- Integrate and interface with third party models, systems, and servers.
- Support interfacing, stimulating, and testing of aircraft avionics and mission systems.
- Model testing, evaluation, analysis, and reporting.
- Support of test events.
- Develop operator physical and graphical user interfaces.

Multi-Domain Systems Modeling efforts contribute to the development of multiple products, including but not limited to:

- NGTS
- WSCE

3.3.1.3 Simulation Systems Software Development

Perform design, development, modification, integration, interfacing, testing, operation, and maintenance of simulation systems. Tasks include, but are not limited to:

- Develop and integrate software interfaces for simulation systems, including distributed simulation interfaces such as DIS, HLA, and TENA.
- Develop software to establish connectivity and interoperability between Battlespace Division systems and facilities and other live, virtual, and constructive systems, labs, ranges, and facilities.
- Develop and maintain Battlespace simulation interfaces, including JSE GSI.

CUI

- Develop and maintain interfaces with simulation hardware systems including image generators, visual display systems, aural cueing systems, shared memory systems, operator stations, control executives, and runtime tools.
- Develop and maintain software to deploy, interface, operate, monitor, and test simulation and stimulation systems, such as simulation operator software, control executives, and runtime tools.
- Develop and maintain software and interfaces for recording, playback, presentation, and post-execution analysis, including the synchronization of multiple audio, video, and data streams for real-time and faster-than-real-time playback and presentation.
- Develop and maintain simulation generation processes that permit user scenario development.
- Develop and maintain simulation control executive software for the command and control of large-scale simulation systems.
- Develop, integrate, and maintain Battlespace simulation software and models.
- Integrate software solutions with other Battlespace software products and third party systems.

Simulation Systems Software Development efforts contribute to the development of multiple products, including but not limited to:

- NGTS
- GRID
- SCE
- ART
- BEAVER
- AMIE

3.3.1.4 Software Test Support

Develop materials for verification, validation, and acceptance of developed software and systems. Coordinate and facilitate government-run system evaluations. Monitor and report on compliance with product requirements for performance, compliance with standard testing processes and procedures, and compliance with system level hardware and software plans. Tasks include, but are not limited to:

- Analyze, evaluate, and extrapolate system and project requirements.
- Develop, maintain, and implement test plans, procedures, and mission scenarios.
- Work with the project IPT and the customer(s) to refine and obtain approval of test plans.
- Support informal and formal SETR events and meetings.
- Perform data collection and analysis.
- Generate test result reports and create discrepancy reports to document and communicate test results and the level of system maturity.

3.3.1.5 Support Software and Toolchain Development

Perform design, development, modification, integration, testing, and operation of support software and development toolchains. Tasks include, but are not limited to:

- Develop and maintain simulation database development and manipulation tools.
- Develop and maintain software to enable the development, testing, and deployment of Battlespace simulation software, models, and documentation.
- Develop and maintain task automation frameworks for Battlespace development and integration activities.
- Integrate solutions with other Battlespace software products and third-party systems.

Support Software and Toolchain Development efforts contribute to the development of all Battlespace Division products. SPM is directly developed in support of this effort.

3.3.2 General Requirements

Software language and tool requirements for each project shall be in accordance with the current Battlespace Division standards, or as otherwise specified in individual Orders. Standards can be provided upon request, after award. Individual Orders will include more specific tasking and performance objectives.

3.3.2.1 Technical Research Studies

The Contractor shall perform technical research and design studies to define performance, operational or user requirements, evaluate new technologies, or improve the capability, efficiency, or reliability of Battlespace Division products and activities.

3.3.2.2 Test and Training Support

The Contractor shall provide technical support for scheduled test, training, experimentation and demonstration events, to include system operation, troubleshooting, event setup, and debriefing.

3.3.2.3 Technical Support

The Contractor shall provide on-site and off-site technical support to other organizations, including Battlespace Division customers and collaborators.

3.3.2.4 Technical Exchanges

The Contractor shall attend user group meetings and symposia as approved by the COR, technical meetings and exchanges, working groups, and System Engineering Technical Reviews (SETR) events to meet program objectives. The Contractor shall develop presentation materials to support technical reviews and meetings.

3.3.2.5 Tours

The Contractor shall support technical tours of Battlespace Division facilities and demonstration of Battlespace and distributed simulation products and capabilities.

3.3.3 Program Support

“Program” is defined as the entire contract effort, managed, administered and operated by the Contractor.

3.3.3.1 Program Management

The Contractor shall manage the contracted effort by providing best-value program performance within cost objectives. The Contractor shall ensure effective management of contracted program and project resources as well as the financial and administrative aspects of the program with respect to the contract. The Manager/Operations Manager shall serve as the primary point of contact with the COR for the contract and oversee the production of deliverables. The Manager/Operations Manager shall review and recommend the development and/or modification of program management plans, strategies, schedules and milestones. The Project Management Specialist (Deputy PM) shall serve under the Manager/Operations Manager (PM) and assist as needed in the direction and management of the program.

3.3.3.2 Program Management Support

The Contractor shall administer and provide financial tracking for the contracted effort. The Contractor shall produce monthly financial reports in accordance with contract reporting requirements (See Section 3.1.3.1). The Contractor shall analyze financial program performance to project funding issues. The Contractor shall coordinate with Business Financial Manager (BFM) on the allocation and expenditure of funds committed to contract. The Contractor shall support program and project managers with management and tracking of financial and contract administrative data.

The Contractor shall develop, analyze, modify, and monitor the implementation of processes, standards, plans, and requirements for Battlespace Division operations and projects.

3.3.4 Project Support

A “Project” is defined as an effort performed within the Program to meet specific technical and operational requirements for the Battlespace Division and its customers executed by Integrated Product Teams (IPTs) consisting of Contractors, Government, and Military employees.

3.3.4.1 Project Management Support

The Contractor shall provide technical writing support to develop product documentation (user manuals, technical manuals, and logistics reports), project documentation (project standards, status reports, meeting minutes, and action items), test definition and results reports, and organization policy and procedure documentation. Support includes researching, writing, editing, and proofreading deliverable logistical and project support documentation in accordance with applicable customer specifications and Battlespace Division standards. Communicate with project team members to develop, collect, and process information required for writing assignments.

The Contractor shall develop and maintain engineering documentation to support the research, development, operation, accreditation, maintenance, and modification of Battlespace Division products and events. Documentation includes, but is not limited to, diagrams, schematics, concepts of operations, technical manuals, test procedures, test results and reports, and user’s manuals.

- Write/edit/track technical documentation using Word/Excel/PowerPoint/Markdown.
- Set-up and support documentation and application online distribution sites via SharePoint and Confluence.

The Contractor shall collect, track, establish traceability, communicate and report project requirements. The Contractor shall collect and organize requirements using customer specifications and assist Battlespace Division IPT’s with development and tracking of derived requirements.

3.3.4.2 Physical Security Support

The Contractor shall provide physical security of the Battlespace Division office spaces. The Contractor shall provide security orientation and badges for new employees, track employee-seating locations, conduct IT spot checks as necessary, ensure offices are properly opened in the mornings and secure for closing in the evenings. Tasks include, but are not limited to:

- Support tracking/scheduling seat moves, preparing for seat moves.
- Add arrivals and departures for facility guests.
- Help with facility administrative needs.
- Support planning and organizing events.
- Empty shredders.
- Escort visitors through the facility.
- Submit tickets via task tracking tool, prepare new workspace.
- Provide escort support for IT and Security requests.
- Inspect daily access logs.
- Provide physical access control to multiple unclassified and secure rooms.
- Perform routine security inspections, breach inspections, and alarm system tests.
- Maintain all applicable, required security paperwork for each room.
- Train users on basic operation and security requirements within secure rooms, to include how to properly secure/unsecure rooms.
- Ensure that security incidents are properly documented and escalated to civilian leadership; ensure residents/visitors receive necessary re-training as needed.
- Respond to alarm calls 24/7.
- Generate quotes and submit purchase order requests for hardware, and other information technology materials.

3.3.4.3 Configuration Management

The Contractor shall maintain a Configuration Management (CM) program for documents, software, Commercial Off-The-Shelf (COTS), and Government Off-The-Shelf (GOTS) documentation in support of Battlespace Division projects and operations in accordance with established procedures. The Contractor shall maintain a Government-owned multimedia technical data library that consists of technical documents, technical data and reports, software, and product user licenses. Tasks include:

- Track and report on the status of project documentation, change documentation (discrepancy reports, change requests, etc.), and deliverable items.
- Support design reviews and Configuration Control Board (CCB) meetings. Track action items from CCB meetings.
- Assure adherence to approved CM standards and procedures.
- Work with project IPTs to determine the schedule, content, and delivery of project baselines and releases. Support the creation, verification, documentation and distribution, and track data package releases.

CUI

- Verify proper use of the approval process for the release of hardware engineering drawings and data lists to manufacturing.
- Maintain Government-owned physical and computer data libraries. Implement procedures to ensure the restoration of software products and digital data in the event of a system failure or disaster.
- Assist with the definition and improvement of CM-related processes and procedures. Document, maintain, and implement project-level CM plans.
- Generate daily/weekly application builds and versions.
- Merge daily/weekly application development, production and feature updates for multiple code branches.
- Migrate data across multiple classified networks including Git branches, code, SPM packages and tags/labels.
- Upload media via Collateral (ARL-SAFE) and CUI (DoD-Safe) for online distribution.
- Create classified and unclassified media for physical distribution to multiple customers across the DOD and Industry.

3.3.4.4 Administrative Support

The Contractor shall provide business operations and managerial support to ensure the smooth and efficient operation of the Battlespace Division, including but not limited to:

- Manage the onboarding of new personnel, ensure new hires are properly integrated into the company's culture and workflow.
- Develop and update documentation/presentation materials such as view graphs, brochures, display booths and other briefing materials to support program/project objectives and business development.
- Provide support for product-user community meetings and conferences.
- Organize and support customer events (NUG, JUG, AUG, PI Planning).
- Coordinate office events that boost morale and create a productive work environment.
- Coordinate with other divisions to streamline administrative processes and improve overall operational efficiency.
- Contractor personnel supporting functions where Personally Identifiable Information (PII) or classified data may be handled, shall complete the Navy provided "Security Awareness training" and "Privacy Act Training" within forty-five (45) days of assignment to such functions and annually thereafter.

3.3.4.4.1 Clerical Support

The Contractor shall perform basic clerical tasks including operating basic office equipment such as personal computers, copiers, scanners, shredders, and fax machines, and sort, route, and distribute incoming materials, mail, and correspondence. The Contractor shall maintain current and archival files - both electronic and hardcopy.

3.3.4.4.2 Applications

The Contractor shall operate on and work with Government business applications including, but not limited to:

- NAVAIR Corporate Applications
- Defense Travel System (DTS)
- Defense Information System for Security (DISS)

- Base Access Security Information Control System (BASICS II)
- NAVY Enterprise Resource Planning (ERP)
- IBST Share Point
- Government developed databases

3.3.4.4.3 Travel Support

The Contractor shall enter/process requests for Government employee travel orders, vouchers, and local vouchers using the DTS and track travel orders and claims. Contractor shall assist Government employees with DD 1056 “Application to Apply for a No-Fee Passport”, passport application, overseas training, and other overseas requirements outlined in the Foreign Clearance Guide (FCG). Provide answers on general DTS and JTR travel-related questions.

3.3.4.4.4 Visitor Support

The Contractor shall enter visitor data, schedule incoming visitors via BASICS II and approve as required (alternate approver for Branch/Division Managers). They shall Process Visit Requests via DISS when the Security Management Office (SMO) code is provided, and prepare a Notification of Unclassified Visit form. They shall support security managers processing classified visits and participate in access control.

3.3.4.4.5 Visitor Control

The Contractor shall perform Visitor Control duties at contractor facilities by greeting and documenting all visitors according to local facility security procedures, including but not limited to customers, tour groups, base public works, inspectors, and maintainers. The Contractor shall monitor and control access to their facility(s) and restricted areas under their responsibility by checking personnel passes, CAC and validating security clearances and visit requests.

3.3.4.4.6 Visitor Escort

The Contractor shall provide visitor escort support in classified Battlespace Division spaces as required when supporting contract requirements. The Contractor shall escort visitors in accordance with the local facility instructions, current NAVAIR and NAWCAD instructions, and NAS Patuxent River directives.

3.3.4.4.7 Personnel Support

The Contractor shall generate reports from internal databases to identify the number of Battlespace Division personnel within each competency, including reports, which depict hires/departures, reassignments, status of personnel, mandatory training, and awards.

3.3.4.4.8 Event Support

The Contractor shall provide administrative and planning support for meetings and events. The Contractor shall maintain schedules for all conference rooms at the BMS Staff, and facilities, identify appropriate locations for meetings, reserve and set-up meeting locations; send out information to attendees, plan and coordinate logistical, administrative, and security arrangements for leads and attendees, arrange for and check out IT and Audio Visual (AV) systems and equipment, perform administrative duties in the organization of lunch services, snacks, and refreshments.

3.3.4.5 Training Support

The Contractor shall provide training support including but not limited to:

- Host informal, internal, weekly training sessions for resident experts to share their knowledge with the Battlespace Division.
- Write, record, edit, and distribute in-house developed application training videos.
- Provide training services for in-house developed applications including NGTS Standard User Training (SUT) for operators and NGTS Software Development Kit (SDK) training for developers on a quarterly basis.
- Maintain library of training videos.
- Provide technical assistance (Help Desk) services on in-house developed applications to customers.
- Maintain constant communication with in-house developed application Subject Matter Experts to effectively answer customer questions.

3.3.4.6 Distributions Support

- Coordinate releasability and disclosure review of software and related materials.
- Coordinate Critical Program Information (CPI) protection reviews.
- Execute/maintain software license agreements with domestic and international customers.
- Coordinate media physical distribution to customers and maintain media copies.
- Coordinate material purchasing.

3.3.4.7 Software Development Operations Support

- Develop tooling and automation processes to improve rigor, repeatability, and team collaboration to increase delivery speed.
- Provide support to software developers with build script troubleshooting and inputs to major software development infrastructure investments and improvements.
- Develop, maintain, and support JSE software installation processes.
- Provide customer support with JTB installation.
- Maintain gitlab software development environment on classified RDT&E network.
- Maintain build servers for IBST DEPT on unclassified and classified RDT&E networks.

3.3.5 Specialized Technical Support

The Contractor shall:

3.3.5.1 Technical Expertise

Provide Subject Matter Expertise (SME) for a broad range of military matters including air-vehicles, sensors systems (RADAR, SONAR, etc.), weapon systems, communications systems, datalinks, air- vehicle simulation and training, LVC simulations, aircraft and aircraft system testing, and M&S Verification, Validation, and Accreditation (VV&A). Tasks include, but are not limited to:

- Development of technical specifications based on an in-depth knowledge of the fleets' operations and requirements.
- Research and analysis of requirements in support of simulation model and scenario development.

CUI

- Research and develop requirements for simulation models and LVC environment scenarios to software developers and/or participating in model development.
- Evaluate and test simulation models and LVC scenarios.
- Evaluate and analyze flight test data.
- Interface with customers and system operators.
- Support, plan, and/or operate simulation and test events in support of test and training objectives.
- Operate model entities in distributed simulation events.

3.3.5.2 Warfighting Scenario Development

Research, design, develop, implement, maintain, test, analyze, and execute engineering-level, engagement-level, mission-level, and campaign-level warfighting scenarios in an LVC simulation of operational and test environments. Tasks include, but are not limited to:

- Conduct research of command and control environments, doctrines, tactics, techniques, and procedures, as well as other operational factors and tactical applications to ensure realism of selected LVC simulations.
- Establish and update orders of battle, signal densities, operational systems, environmental conditions, adversary action, and other factors required to simulate accurately selected warfighting LVC environments.
- Operate post-test analytical tools relating to warfighting scenario execution.
- Identify, report, and take and/or direct corrective actions to resolve deficiencies with warfighting scenarios.
- Support research and technical design studies in support of the warfighting simulation technical libraries.
- Scenario development. Studies include the use of operational, doctrinal, technical, parametric, and other databases generated and maintained by a cognizant government agency.

3.3.6 Materials

3.3.6.1 Contract Material Purchases

The Contractor shall obtain prior written approval from the COR/PCO prior to purchase of any material and ODC As directed in CTXT-242.9520 PROCEDURES AND APPROVALS REQUIRED PRIOR TO INCURRING DIRECT MATERIAL COSTS (VARIATION).. In the course of execution, the Contractor may propose form updates, an alternate form or method to be implemented with concurrence of the COR, Contractor PM and the PCO. If the Contractor's DO/TO proposal includes a list of materials with associated prices, then the PCO acceptance of the Contractor's proposal shall constitute written approval of those purchases. Any material provided by the Contractor is subject to the requirements of the FAR, the Defense Federal Acquisition Regulation Supplement (DFARS), and applicable Department of the Navy regulations and instructions including CTXT.242-9520 PROCEDURES AND APPROVALS REQUIRED PRIOR TO INCURRING DIRECT MATERIAL COSTS (VARIATION). All materials not depleted during the performance of this contract shall become Government property upon completion of this contract. The Contractor shall transfer all materials not depleted to the COR by way of Material Inspection and Receiving Report (DD Form 250). Material costs may include general and administrative expenses but shall not include profit/fee

All materials not depleted during the performance of this contract shall become Government property upon completion of this contract. The Contractor shall transfer all materials not depleted to the COR by way of Material Inspection and Receiving Report (DD Form 250). Material costs may include general and administrative expenses but shall not include profit/fee.

3.3.7 Travel

The Contractor may be required to travel in support of Orders issued under this contract. Travel will be allowable only when it is essential to the performance of the tasks detailed in the Order. The COR shall approve in writing all travel performed in support of this contract prior to the commencement of the travel. COR approval for local travel expenses is required.

Travel locations may include, but are not limited to, various commercial facilities, Contractor facilities, Navy facilities and ships, DoD facilities/installations, other Government agency offices (e.g. test ranges, operational activities, project/program offices, and support activities), including travel OCONUS.

The numbers of trips and types of personnel traveling shall be limited to the minimum required to accomplish work requirements. Personnel traveling for a common mission shall utilize common facilities and transportation (e.g. hotels and rental cars) as much as is practical. The Government will not reimburse travel costs incurred in replacing personnel at a TDY site when such replacement is at the Contractor's or employee's convenience. Exceptions may be made with COR approval when considering the circumstances of the stated travel.

Contractor personnel may be authorized to be a passenger on Government or military aircraft, ships, and barges during non-test periods in the performance of their duties under this contract. This authorization may only be granted if the aircraft, ship, or barge is a test asset. Contractor personnel will never be authorized to be a passenger if the aircraft, ship or barge is an Engineering and Manufacturing Development (EMD) item. Contractor personnel may also be authorized to be a passenger in Government-operated shuttles. Contractor transport on Government or military vehicles will be authorized only when such transport is essential to the performance of the contract and is determined to be cost-effective for the Government. The Contractor's travel request to the COR shall specifically request the use of Government transportation when applicable.

Costs associated with travel and lodging shall be reimbursed in accordance with the Joint Travel Regulation (JTR).

3.4 Labor Category Definitions

The Contractor shall be responsible for employing personnel with at least the minimum level of education, training, experience, and security clearance as stated under each labor category specified herein. The Contractor employees shall remain current on technological advances relevant to the requirements they support. All positions of this contract are eligible for higher levels of security clearance up to TS/SCI as defined at the Order level. When proposing, the Offeror should be aware of the differences between the experience and education level definition in section 3.4.1.2 and the professional labor category degree/experience requirements in section 3.4.1.4.

3.4.1 Professional Labor Categories

The following defines the Bureau of Labor Statistics Standard Occupational Classification (BLS SOC) Code, minimum labor category education, experience, and functional description for each professional labor category.

3.4.1.1 Professional Labor Categories, Levels, and BLS SOC Codes

Professional Labor Category	Level	BLS SOC Code	Minimum Security Clearance	Maximum Security Clearance
Manager / Operations Manager	Senior	11-1021	Secret	Top Secret/SCI
Project Management Specialist	Journeyman	13-1082	Secret	Top Secret/SCI
Management Analysts	Junior	13-1111	Secret	Top Secret/SCI

3.4.1.2 Experience and Education Level Definitions

Unless otherwise defined in the following sections, the professional labor category experience and education requirements corresponding to the three levels specified above (i.e., Junior, Journeyman, and Senior) are as follows:

JUNIOR: A Junior level person within a labor category typically has less than 3 years of experience performing work related to the labor category functional description and a BS/BA degree (or a qualifying substitution as identified in this section). A Junior level person is responsible for assisting more senior positions and/or performing functional duties under the oversight of more senior positions.

JOURNEYMAN: A Journeyman level person within a labor category typically has 3 to 10 years of experience performing work related to the labor category functional description and a BS/BA degree or a qualifying substitution as identified in this section. A Journeyman level person typically performs all functional duties independently.

SENIOR: A Senior level person within a labor category typically has over 10 years of experience performing work related to the labor category functional description and an MS/MA degree, or a qualifying substitution as identified in this section. A Senior level person typically works on high-visibility or mission critical aspects of a given program and performs all functional duties independently. A Senior level person may oversee the efforts of less senior staff and/or is responsible for the efforts of all staff assigned to a specific job.

The following qualification substitution chart details the combination of education/experience that can be used as a substitute for the degree requirements applicable to the above experience/education levels, except as otherwise noted.

Bachelor's Degree *	6 years of additional work experience related to the labor category functional description may be substituted for a Bachelor's Degree.
	Associate's Degree plus 4 years of additional work experience related to the labor category functional description may be substituted for a Bachelor's Degree.
Master's Degree	Bachelor's Degree plus 4 years additional work experience related to the labor category functional description may be substituted for a Master's Degree.

* Note: Engineering labor categories REQUIRE an engineering degree. Years of experience cannot be substituted for a Bachelor's Degree for engineering labor categories.

"Years of experience" shall mean full, productive years of participation.

"Productive years" shall mean 52 weeks of work reduced by reasonable amounts of time for holidays, annual and sick leave.

If participation was part-time, or if less than one-half of the standard workweek was spent performing qualifying functions, the actual time spent performing qualifying functions may be accumulated to arrive at full years of experience.

3.4.1.3 College Degree/Degree Majors

All degrees shall be obtained from an accredited college or university as recognized by the U.S. Department of Education. This includes Associates, Bachelor's, Master's, and Doctorate degrees.

Business or Business Discipline. When used in relation to educational or work experience requirements, "business discipline" shall mean any of the following specific subjects, disciplines, or areas of work experience only: Business Administration, Business Management, Project Management, Data Analytics, Economics, Finance, Accounting or related derivative degrees.

Engineering or Engineering Discipline. When used in relation to educational or work experience requirements, "engineering discipline" shall mean any of the following specific subjects, disciplines, or areas of work experience only: Aerospace, Computer, Software Systems, Electrical, Electronic, or Mechanical Engineering.

Scientific Disciplines. When used in relation to educational or work experience requirements, "scientific discipline" shall mean a degree in the fields of Data Science, Computer Science, Engineering, Information Technology, Mathematics, or Physics.

Technical Disciplines. When used in relation to educational or work experience requirements, "technical discipline" shall mean a degree in the fields of Engineering Technology, Cyber Security, Computer Science, Information Technology, Mathematics, Operations Research, Data Analytics, or Engineering.

3.4.1.4 Professional Labor Category Degree/Experience Requirements

Labor Category	Level	Degree/Experience Requirements
Manager / Operations Manager (Program Manager)	Senior	MS/MA degree in technical or business discipline. Shall have a minimum of ten (10) years of experience with five (5) years in program or project management in a technical Department of Defense environment. A non-technical or non-business BS/BA degree may be substituted with an additional five (5) years of management experience.
Project Management Specialist (Deputy Program Manager)	Journeyman	BS/BA degree in technical, scientific, or business discipline or a qualifying substitution as identified previously. Shall have at least 8 years of experience performing work related to the labor category functional description.
Management Analyst	Junior / Journeyman	BS/BA degree in technical, scientific, or business discipline or a qualifying substitution as identified previously.
	Senior	MS/MA degree in technical, scientific, or business discipline or a qualifying substitution as identified previously.
Software Quality Assurance Analyst and Tester	Junior / Journeyman	BS/BA degree in technical discipline relevant to the functional description or a qualifying substitution as identified previously. Special Substitution Junior: High School diploma or GED with at least 3 total years of relevant experience. Special Substitution Journeyman: High School diploma or GED with at least 5 years of relevant experience.

CUI

	Senior	MS/MA degree relevant to the functional description or a qualifying substitution as identified previously. Experience and/or training in a high-level programming language such as C++ and MATLAB.
Electrical Engineer	Junior / Journeyman	BS degree in Electrical Engineering. Requires experience or training in the use of AutoDesk's AutoCAD software.
	Senior	BS degree in Electrical Engineering. MS/MA degree relevant to the functional description. Requires experience or training in the use of AutoDesk's AutoCAD software.
Aerospace Engineer	Junior/ Journeyman	BS degree in Aerospace Engineering.
	Senior	BS degree in Aerospace Engineering, MS/MA degree relevant to the functional description.
Software Developer	Junior / Journeyman	BS degree in a Computer Science or Engineering.
	Senior	BS degree in a Computer Science or Engineering and ten (10) years of experience relevant to the functional description.
Tactical Operations and Air/Weapons Specialist	Journeyman	Has at least 8 years of experience performing work related to the labor category functional description. High School diploma or GED.
	Senior	Has at least 12 years of experience performing work related to the labor category functional description. High School diploma or GED.
Special and Tactical Operations Leader	Journeyman	BS/BA degree and at least 8 years of experience performing work related to the labor category functional description.
	Senior	BS/BA degree and at least 12 years of experience performing work related to the labor category functional description.

3.4.1.5 Professional Labor Category Functional Descriptions

Manager / Operations Manager, BLS SOC Code 11-1021 (Program Manager): Acts as the overall lead, manager, and administrator for the contracted effort. Serves as the primary interface and point of contact with Government program authorities on technical and program/project issues. Oversees contractor execution of the contract requirements. Manages acquisition and employment of program/project resources. Duties include developing and implementing standard operating procedures to improve the effectiveness of the contracted effort.

Project Management Specialist, SLC SOC Code 13-1082 (Deputy Program Manager): Serves as a Deputy Program Manager in assisting with the management of the program. Serves under the Manager / Operations Manager (PM) to offload tasking where needed. Provides PM with administrative assistance in the execution of the contract. Duties include management of acquisitions and employment of program resources. Analyze and coordinate the schedule, timeline, procurement, staffing, and budget of a product or service on a per project basis. Lead and guide the work of technical staff. May serve as a point of contact for the client or customer.

CUI

Management Analyst, BLS SOC Code 13-1111: Applies analytic techniques in the evaluation of program/project objectives. Develops, maintains, and analyzes project/program requirements, status, budget, and schedules.

Develops and implements project processes, plans and procedures. Duties and responsibilities may include:

- Development of organization and project level business processes, standards, and procedures.
- Development, maintenance, and reporting of detailed project technical requirements and performance.
- Development, maintenance, and analysis of Microsoft Project schedules. Reporting on project status and performance metrics.

Software Quality Assurance Analyst and Tester, BLS SOC Code 15-1253: Develop and perform tests of systems to identify software or hardware/software deficiencies and to verify compliance with system requirements. Document software defects and requirement compliance, and report defects to developers. Create and maintain databases of known defects. Participate in software design reviews to provide input on functional requirements, operational characteristics, product designs, and schedules.

Aerospace Engineer, BLS SOC Code 17-2011: Researches, designs, develops, tests, implements through software coding, and improves simulation models of air vehicles, air vehicle interactions, mission systems, and air vehicle sub-systems. Collects, processes, and analyzes quantitative flight, ground, and wind test data and combines it with qualitative feedback from pilots obtained during simulation sessions to improve the performance of simulation models. Supports the testing, verification, and validation of air vehicle models in accordance with their intended use.

Electrical Engineer, BLS SOC Code 17-2071: Applies electrical engineering principles to investigate, analyze, plan, design, develop, implement, and test systems. Reviews and prepares electrical engineering and technical analyses, reports, change proposals, and other technical documentation. Develops electrical design schematics, models, detail design documentation, and supporting technical information in support of the production of electrical systems.

Provides electrical engineering support for project planning, manufacturing, assembly, discrepancy resolution, system integration, and system installation.

Software Developer, BLS SOC Code 15-1252: Research, develop, create, and modify novel computer applications, simulation models, scripts, and utility programs. Analyze user needs and develop unique software solutions. Typical applications include real-time simulation executives, data communication and distribution, system control and operator software, graphical user interfaces, hardware interfacing, database design and interfacing. Support requires work experience in the use of C++. Senior level software developers research and develop original software top level designs and architectures, implement software and configuration standards, and interact heavily with customers in addition to software development. Tools used for software development include Microsoft Visual Studio, Git and the Atlassian Tool Suite including Confluence, JIRA and Bit Bucket.

Tactical Operations and Air/Weapons Specialist, BLS SOC Code 55-3000: Applies Subject Matter Expertise (SME) from experience as an enlisted military specialist towards the research, development, evaluation, and operation of developed simulation and stimulation solutions. Experience in the tactical employment and operations of military platforms and weapons systems including sensor system operation, electronic warfare, command and control, communications, Unmanned Aerial Vehicle (UAV) operation, or avionics mission systems operation. Duties include supporting the development and refinement of system requirements, system development support, system operation support, test and evaluation of developed systems, procedure development, user training, and flight/ground test event support.

Special and Tactical Operations Leader, BLS SOC Code 55-1000: Applies Subject Matter Expertise (SME) from experience as a military officer towards the research, development, evaluation, and operation of developed simulation and stimulation solutions. Experience in the tactical employment and operations of military platforms and weapons systems; includes pilots (fixed and rotary wing), tracking specialists, electronic warfare, Undersea Warfare (USW), Battlespace dominance, Command, Control, Communications, Computer, and Intelligence (C4I), cyber warfare, and weapons systems. Duties include the development and refinement of system requirements, system development support, system operation support, test and evaluation of developed systems, scenario development, user training, and flight/ground test event support.

ADDITIONAL DUTIES: Acts as Team Lead, managing project efforts and leading problem resolution.

3.4.2 Additional Labor Categories

The following defines the BLS SOC Code, minimum labor category education, experience, and functional description for each labor category.

3.4.2.1 Additional Labor Categories, Levels, and BLS Codes

Additional Labor Category	BLS SOC Code
Accounting Clerk III	43-3031
Technical Library Clerk	27-3042
Technical Writer I	27-3042
Technical Writer III	27-3042
Computer Programmer I	15-1251
Computer Programmer II	15-1251
Computer Programmer III	15-1251
Order Clerk II	43-4151
Shipping/Receiving Clerk	43-5071
Physical Security Specialist	11-3013

3.4.2.2 Experience and Education Level Definitions for Additional Labor Categories

“Years of experience” shall mean full, productive years of participation.

“Productive years” shall mean 52 weeks of work reduced by reasonable amounts of time for holidays, annual and sick leave.

If participation was part-time, or if less than one-half of the standard workweek was spent performing qualifying functions, the actual time spent performing qualifying functions may be accumulated to arrive at full years of experience.

3.4.2.3 Additional Labor Category Experience and Education Requirements

Additional Labor Category	Years of Experience in Functional Description	Education Required
Accounting Clerk III	5	High School diploma or GED
Technical Library Clerk	1	High School diploma or GED
Technical Writer I	1	High School diploma or GED
Technical Writer III	5	Bachelor's Degree or a qualifying substitution
Computer Programmer I	1	High School diploma or GED
Computer Programmer II	5	
Computer Programmer III	10	
Order Clerk II	3	High School Diploma or GED
Shipping/Receiving Clerk	1	High School Diploma or GED
Physical Security Specialist	1	High School Diploma or GED

3.4.2.4 Additional Functional Descriptions

Accounting Clerk III, BLS SOC Code 43-3031: Performs basic activities in support of program functions such as budgeting, auditing, and forecasting funding expenditures. Collects and reviews program financial data from various databases and other sources. Creates, maintains, and updates spreadsheets, and generates various reports as required. Prepares standard financial reports. Maintains appropriate records and documentation. Supports assigned managers in managing, tracking, monitoring, and reporting financial data as required.

Technical Library Clerk, BLS SOC Code 27-3042: Acquires, processes, stores and retrieves technical documents in various formats. Manages configuration control of documents, software and hardware in accordance with established procedures. Maintains a multimedia technical data library that consists of technical documents, technical data and reports, software, and product user licenses.

Technical Writer, BLS SOC Code 27-3042: The Technical Writer develops and edits material for reports, manuals, briefs, proposals, instruction books, catalogs, and related technical and administrative publications concerned with work methods and procedures, and installation, operation, and maintenance of technical systems. Typical products include maintenance and operations manuals, technical systems descriptions, logistical reports, project status reports, and design review documentation. This worker organizes material and completes writing assignments according to set standards regarding order, clarity, conciseness, style, and terminology.

- Technical Writer I, BLS SOC Code 27-3042: Performs technical writing assignments with direction from senior writers or supervisor using prescribed formats with sample materials. Receives and incorporates technical information provided by the development team Engineers and project management.
- Technical Writer III, BLS SOC Code 27-3042: Performs technical writing assignments with minimal direct supervision. Develops materials that may not have prescribed standards. This writer interviews production and engineering personnel and reviews technical documentation to develop the understanding required to perform writing assignments. This writer reviews written materials and recommends revisions or changes in scope, format, and content.

Computer Programmer, BLS SOC Code 15-1251: Perform independent research, create, modify, and test novel software code, forms, and scripts. Computer programming assignments typically involve database interfacing and manipulation, graphical user interfaces, data manipulation, data formatting and display, automation scripts, and I/O component interfacing, including the unique nature of real time coding. The Computer Programmer tests and corrects programs, prepares instructions for operators who control the computer during runs, modifies programs to increase operating efficiency or to respond to changes in work processes, and maintains records to document program development and revisions. Computer Programmers may also perform programming analysis such as gathering facts from users to define their business or scientific problems and investigating the feasibility of solving problems through new or modified computer programs. Programming in support of simulation applications requires proficiency with higher level programming languages such as C++.

- Computer Programmer I, BLS SOC Code 15-1251: Assists higher-level staff by performing elementary programming tasks which concern limited data items and steps which closely follow patterns of previous work done in the organization. This worker may perform routine programming assignments (as described in Level II) under close supervision.
- Computer Programmer II, BLS SOC Code 15-1251: Performs routine programming assignments that do not require skilled background experience but do require knowledge of established programming procedures and data processing requirements, and works according to clear-cut and complete specifications.
- Computer Programmer III, BLS SOC Code 15-1251: The Computer Programmer III is a fully qualified programmer that applies standard programming procedures and detailed knowledge of pertinent subjects to independently research, develop, modify, and maintain, assigned programs.

Ordering Clerk, BLS Code 43-4151: Receive and process incoming orders for materials, merchandise, classified ads, or services such as repairs, installations, or rental of facilities. Generally receives orders via mail, phone, fax, or other electronic means. Duties include informing customers of receipt, prices, shipping dates, and delays; and handling complaints. Work with the Contractor and the COR to receive and approve purchase requests, ensuring costs, IA approval, and TAA compliance are all verified.

Shipping/Receiving, BLS Code 43-5071: Verify and maintain records on incoming and outgoing shipments involving inventory. Duties include verifying and recording incoming merchandise or material and arranging for the transportation of products. May prepare items for shipment.

Physical Security Specialist, BLS SOC Code 11-3013: Advises senior managers in physical security project planning, development, implementation, and monitoring. Oversees and reviews the application of physical security standards to functional control designs and security programs and makes recommendations as necessary.

Coordinates and cooperates with other agencies, private firms, and individuals on physical security policy and standards. Reviews and authorizes requests for funding of physical security improvements.

3.5 Contract Deliverables Requirements List

The Contractor shall, when specified or otherwise required, provide the following data outlined below in support of the technical task. To enable electronic data harvesting and cross-checking, personnel names and labor categories shall be the same across all CDRLs that use them and be consistent with the descriptions in Section 3.4 or as established at the Order level.

3.5.1 Other Reporting

The Government may require the Contractor to provide additional reporting, documentation, and schedules in accordance with deliverable requirements (CDRLs) incorporated at the Order level. Reporting should be in sufficient detail and quality to meet the requirement established in the individual Orders and shall comply with the standards and guidelines in Section 3.0. Other reporting requirements may include, but are not limited to:

- Technical reports, documentation, requirements, data, evaluations, and analysis.
- Software source code and executables.
- Manufacturing drawings, data, lists, procedures, and schematics.
- Maintenance requirements, guidelines, schedules, procedures, instructions, and corrective actions.
- Agendas, minutes, and presentation materials for meetings, presentations, and conferences.
