

FEDERAL BUREAU OF PRISONS ELECTRONICS REPLACEMENT/UPGRADE

By: Nathan Quick

STUN/LETHAL FENCES

- All Penitentiary's with the exception of USP Tucson and USP Yazoo City to replace/upgrade stun/lethal fences
- All Penitentiary's to install Lidar to cover from building to perimeter fence line.
- Separate project to install a stun/lethal fence and Lidar at ADX Florence.
- Stun/lethal fence SOW will be seeking systems built with off-the-shelf products to minimize downtime and maintenance.

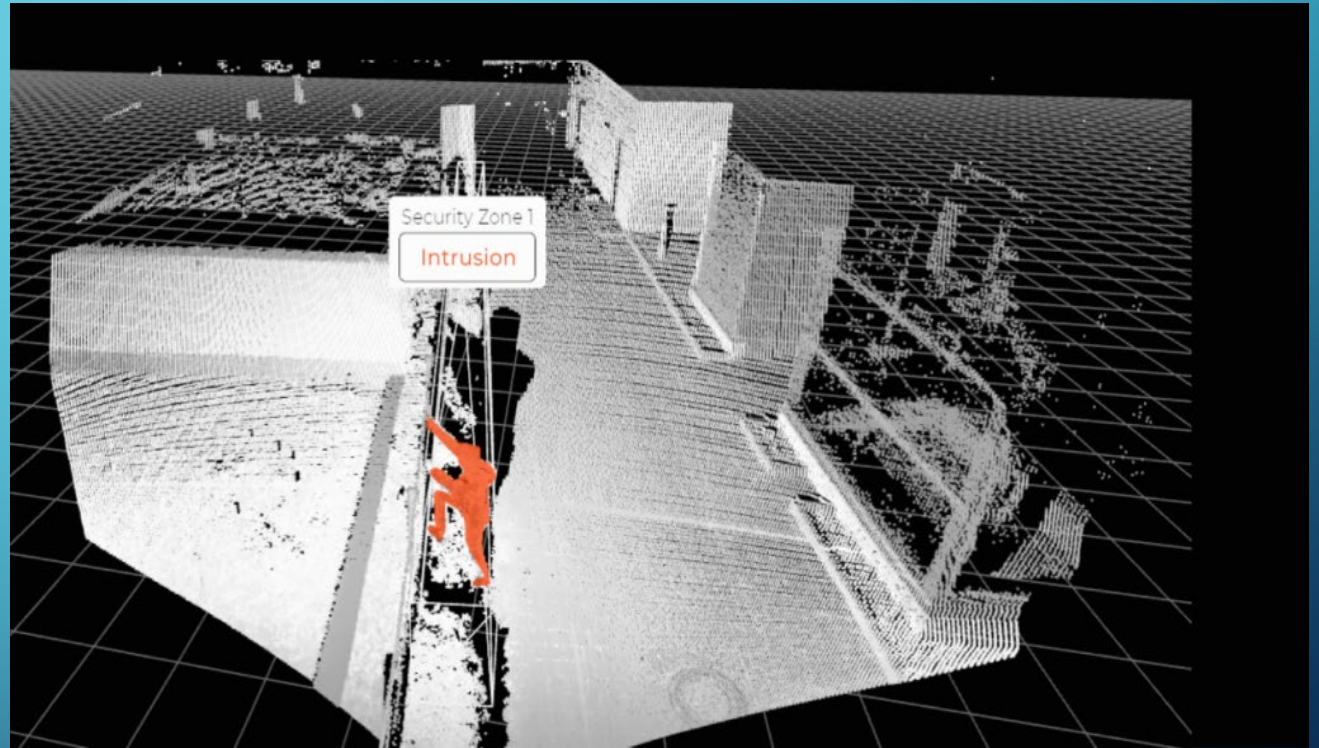

LIDAR

LiDAR sensors provide continuous, volumetric detection across secure areas.

Coverage from exterior building walls to perimeter fence.

System must have high detection accuracy with a low false-alarm rate.

Must perform fully in low light and total darkness situations.

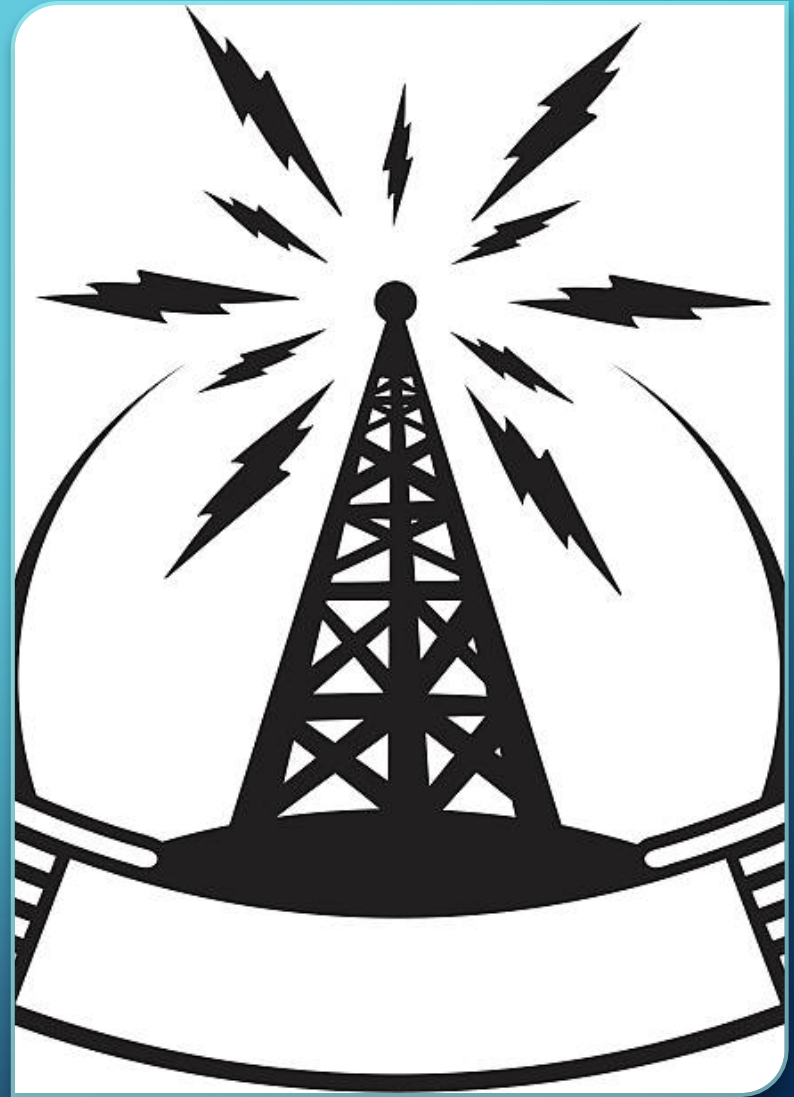

RADIO SYSTEM

BOP project to replace remaining Smartnet radio systems with an Enterprise system.

64 institutions involved, including 2 core systems to control the system.

30 existing upgraded institutions to be converted to sub systems and added to the core's at a later date.

INSTALLATION

BOP staff will remove and install FCI detection fences.

Stun/lethal fences are responsibility of the contractor.

ADX Florence fence project will require extensive concrete.

Lidar is new to the BOP and will enhance the security of selected institutions.

Lidar installation is the responsibility of the contractor.
