## Acquisition of Data Axle Database Subscription Service Statement of Work (SOW)

### General Information

#### 1.0 Scope of Work

NASS requires access to a robust and comprehensive database of U.S. household and business information that consists of current addresses, telephone numbers, email addresses and demographic information for the purpose of maintenance and update to the NASS List Frame. Confidentiality laws, and NASS List Frame maintenance systems and record linkage tools require the delivery of product in a flat file format for internal Agency use. NASS requires access to full-file household and business databases, and quarterly updated files received electronically. Market research has revealed that Data Axle's *Household and Residential* and *Consumer Residential Cell Phone* database is the only found product that provides the information and product delivery method NASS requires.

#### 2.0 Background

The United States Department of Agriculture, National Agricultural Statistics Service (NASS), National Operations Division (NOD) Frames Maintenance Group (FMG) maintains a List Sampling Frame of farm operators and agri-businesses for the purpose of survey and census sampling. The NASS List Sampling Frame requires continuous regular maintenance and update to ensure full and accurate survey samples for the collection of data used to produce NASS reports. Maintaining a complete and accurate List Sampling Frame is critical to the production of the Census of Agriculture and Principal Federal Economic Indicator reports, which are Mission Essential Functions of the Agency.

### Contractor Requirements

#### 3.0 Technical Requirements / Tasks

- The Contractor shall provide:
  - *Household and Residential* and *Consumer Residential Cell Phone* database access license for unlimited use
  - Quarterly electronic delivery of updated and formatted database files for NASS internal use
  - Account support and training as required by NASS

#### 4.0 NASS Project Management Office's Project Administration Manual (PAM)

For NASS projects to be successful, they must adhere to standardized project management practices, using industry leading best practices tailored for the needs of NASS. The attached NASS Project Administration Manual (PAM) includes the NASS Project Management Office's (PMO) processes, project management best practices, tools, and resources. Regarding the PAM, the Contractor shall:

1. Adhere to the project management standards outlined in the NASS PAM throughout the duration of the project.
2. Follow the project lifecycle framework described in the NASS PAM, including the identification of opportunities, initiation, requirements analysis, design, development, acceptance, implementation, and closeout phases. (Utilizing Agile, Waterfall or Hybrid methodologies as per project requirements.)
3. Use the checklists and templates provided in the NASS PAM during each phase of the project lifecycle to ensure consistent project management practices.
4. Incorporate the NASS PMO responsibilities, project activities, outputs, and templates specific to each lifecycle phase as described in the NASS PAM.
5. Use the support systems and tools, such as Microsoft Project Central Suite, JIRA, and SharePoint sites, as described in the NASS PAM, for tracking and managing project and product information.
6. Collaborate with the NASS PMO and project stakeholders to facilitate the implementation, transition, and adoption of new solutions, ensuring alignment with the project management practices outlined in the NASS PAM.
7. Recognize that the NASS PAM is a living document that may undergo revisions based on project planning and execution cycles, and shall adapt the project management practices accordingly.

8. Use the NASS PAM as a supplementary resource, complementing other key NASS documentation, such as the NASS Software Development Life Cycle Manual, the Contractor's own internal project management controls, and leading industry practices like the Project Management Institute (PMI) Project Management Body of Knowledge (PMBOK) Guide.
9. Comply with any additional guidelines or instructions provided by the NASS PMO regarding the use of the NASS PAM and project management standards.
