

San Francisco VA Medical Center

4150 Clement St

San Francisco, CA 94121

Project: 662-23-111, Repair and Weatherize Parking Structure 211 Elevator

Statement of Work

The San Francisco VA Medical Center requires the services of a qualified General Contractor to construct Project 662-23-111, Repair and Weatherize Parking Structure 211 Elevator. The general scope of this requirement is to refurbish the single elevator from effects of weather and to construct a vestibule to limit further future deterioration. The nature and requirements of this construction are fully exhibited in the attached Construction Documents which include the following:

Bid Documents - Combined Drawing Set – This comprises the full drawing set as a single file.

Bid Documents - Specifications – This contains the entire project specification

Parking Structure 211 - Original Construction Documents

The exterior area of construction is located entirely within the footprint of Parking Structure 211.

Construction Management software is to be used in the completion of this requirement and will be provided by the government absent an established and acceptable platform utilized by the awardee. The software currently in use is Submittal Exchange. The government will grant access to all parties associated with the General Contractor as requested by the GC project manager.

The period of performance for this action is 180 calendar days. The contractor generated Master Project Schedule shall meet the requirements of VAAR 852.232-71 to demonstrate critical path, identify float, and indicate costs by definable feature of work to facilitate timely and accurate progress payments.
