LIST OF DRAWINGS  
02/11, CHG 1: 08/14

PART 1 GENERAL

1.1 SUMMARY

This section lists the drawings for the project pursuant to contract clause "DFARS 252.236-7001, Contract Drawings, Maps and Specifications."

1.2 CONTRACT DRAWINGS

Contract drawings are as follows:

| Sheet Number | PWD-MENO   | NAVFAC Dwg No. | Drawing Title                            |
|--------------|------------|----------------|------------------------------------------|

SECTION 01 11 00.00 22

SUMMARY OF WORK (PWD ME)  
05/21

PART 1 GENERAL

This Section applies to Design-Bid-Build projects at the Portsmouth Naval Shipyard and PWD ME AOR Facilities.

1.1 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Salvage Plan; G

1.2 WORK COVERED BY CONTRACT DOCUMENTS

1.2.1 Project Description

The work includes the construction of a desalination facility within the area of Building 242 and Building 72 and includes a new intake at Building 242 and a new discharge at Berth 4.

This project will repurpose the Pump Room 5 located in Building 72 to be modified and dedicated to the new desalination facility.

The desalination system will employ a multi-step treatment process to provide feed water for boiler and cooling water in Building 72. In the first treatment step of the process, seawater will be pumped through an ultrafiltration (UF) membrane process. This initial unit process is a prefiltration step before Reverse Osmosis (RO) desalination is used. Treated water (permeate) from the UF will be pumped through a two stage, high pressure reverse osmosis membrane process.

The major components of this project include:

- a. A new intake at Building 242.
- b. A new desalination intake pump station within Building 242 that will be installed adjacent to the existing Auxiliary Sea Water (ASW) pump station. The desalination intake pump station will function independently (electrically and hydraulically) of the ASW pump station.
- c. A new piping system that connects Building 242 and Building 72. This piping system will convey raw water from Building 242 and Building 72. New conduits for electrical power and signal wires will also be included.
- d. A new desalination facility primarily placed within:
  - (1) The Pump Room S in Building 72

- (2) A new tank pad adjacent to the Pump Room S (Tank Pad)
- (3) A new Pump house located on the tank pad (BWRO / Room B)
- (4) A new chemical storage room, Room M
- e. A new room located near the condensate tank (Room M)
- f. A new stair system in the Pump Room S.
- g. A new piping system that connects Building 72 to the outfall at Berth 4. This piping system will convey concentrated brine raw water from Building 72 to the outfall. This piping system will also discharge non-saline water used for backwash in the desalination facility operations.
- h. A new outfall at Berth 4.
- i. Partial or complete abandonment of the Saltwater Tunnel (as bid options).
- j. All associated electrical and process control equipment.

#### 1.2.2 Project Sequencing Requirements

The following restrictions apply to the sequencing of the work:

- a. Existing furniture and equipment to remain in construction areas (e.g. office furniture, etc.) must be protected from dust, debris, demolition, and construction activities to ensure the items are not damaged and are useable at project completion. Temporary partitions must be full height. Provide daily cleanup as specified in Section 02 41 00 DEMOLITION and as directed by the Contracting Officer.
- b. The building will be occupied by Government personnel adjacent to and within work areas during the project. Buildings 72 and 242 are 24/7 production facilities. Equipment and personnel must be protected at all times.
- c. Construction sequencing and phasing plans have been developed in coordination with the Government and are provided within the drawing set. The construction sequencing/phasing plans provide proposed construction sequence strategies. Development of an independent construction phasing plan and construction schedule is the responsibility of the Contractor and shall be prepared in coordination with the Contracting Officer. The independent construction phasing plan and construction schedule shall be prepared to avoid impacting production operations.
- d. During the phased work of this project, occupied portions of Buildings 242 and 72 must remain fully operational including, but not limited to, the following utilities: plumbing, heat, ventilation, air conditioning, fire suppression, fire alarm, electrical power, communications systems, and security systems.
- e. Buildings on the Portsmouth Naval Shipyard, including Building 72, are historic facilities and require special coordination to have limited impact on the historic fabric and character defining features of the structure. Work must comply with the SECRETARY OF THE INTERIOR'S

## STANDARDS FOR THE TREATMENT OF HISTORIC PROPERTIES.

- f. The Government may require and will provide escorts for the Contractor while working inside all buildings. Coordinate with the Contracting Officer to confirm which buildings require escorts and to schedule escorts. The project schedule developed in accordance with Section 01 32 17.00 20 COST-LOADED NETWORK ANALYSIS SCHEDULES (NAS) will be used to coordinate required escorts. Notify Contracting Officer weekly of escorts required for the subsequent three weeks of work.

### 1.2.3 Location

The work is located at the Portsmouth Naval Shipyard in Building 72 and Building 242. Note the "Project Site" is the specific area of construction within the limits of work as defined by the contract documents.

### 1.3 OCCUPANCY OF PREMISES

All buildings will be occupied during performance of work under this Contract. At a minimum, identify all building occupancies three weeks in advance on the 3-week look-ahead schedule.

Before work is started, arrange with the Contracting Officer a sequence of procedure, means of access, space for storage of materials and equipment, and use of approaches, corridors, and stairways. While the building is occupied, life safety measures and access to egress components must be maintained. Provide temporary egress lighting, emergency lighting, fire alarm, and fire protection systems along paths of egress.

### 1.4 EXISTING WORK

Remove or alter existing work in such a manner as to prevent injury or damage to any portions of the existing work which remain.

Repair or replace portions of existing work which have been altered during construction operations to match existing or adjoining work, as approved by the Contracting Officer. At the completion of operations, existing work must be in a condition equal to or better than that which existed before new work started.

### 1.5 LOCATION OF UNDERGROUND UTILITIES

Verify location of underground utilities in accordance with Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME).

#### 1.5.1 Notification Prior to Excavation

Notify the Contracting Officer at least fourteen (14) working days prior to starting excavation work. See Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME) and attachments for Dig Safe requirements.

### 1.6 SALVAGE MATERIAL AND EQUIPMENT

Items designated by the Contracting Officer to be salvaged remain the property of the Government. Segregate, itemize, deliver and off-load the salvaged property at the Government designated storage area located on the Portsmouth Naval Shipyard.

Provide a salvage plan, listing material and equipment to be salvaged, and

their storage location. Maintain property control records for material or equipment designated as salvage. Provide a system of property control that is approved by the Contracting Officer. Store and protect salvaged materials and equipment until disposition by the Contracting Officer.

#### 1.7 BENEFICIAL OCCUPANCY REQUIREMENTS

All work elements identified as "Required for Facility Delivery (BOD)" included in Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME) Appendix A must be completed and accepted by the Contractor's QC Manager prior to submitting the form to the NAVFAC PWD ME Construction Manager for NAVFAC PWD ME signatures.

The Contractor must submit the completed NRZ Checklist with the required documentation no later than ten (10) working days prior to requesting the Government take Beneficial Occupancy.

Failure of the contractor to verify all work and provide the required documentation will delay the processing of acceptance of Beneficial Occupancy.

#### PART 2 PRODUCTS

Not used.

#### PART 3 EXECUTION

Not used.

-- End of Section --

SECTION 01 14 00.00 22

WORK RESTRICTIONS (PWD ME)  
**11/22, CHG 4: 02/25**

PART 1 GENERAL

This Section applies to Design-Bid-Build and Design-Build projects at the Portsmouth Naval Shipyard only.

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)

NFPA 241 (2022) Standard for Safeguarding  
Construction, Alteration, and Demolition  
Operations

U.S. ARMY CORPS OF ENGINEERS (USACE)

EM 385-1-1 (2024) Safety -- Safety and Occupational  
Health (SOH) Requirements

U.S. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION (NARA)

21 CFR 1040 Performance Standards for Light-Emitting  
Products

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

List of Contact Personnel; G

Flooding Mitigation Strategy Plan

SD-06 Test Reports

PWD ME Contractor Weekend Worklist

CRITICAL INFRASTRUCTURE RISK ANALYSIS (RA) AND RISK MITIGATION  
PLAN (RMP); G

Outage Requests; G

1.3 SPECIAL SCHEDULING REQUIREMENTS (PNSY)

- a. Work requiring interruption (i.e., outage) of any Portsmouth Naval Shipyard service or thoroughfare, including but not limited to

roadways, parking spaces, crane rail, railroads, and utility services, requires coordination around and submission of an outage package prior to commencement of the work. Outage packages must be submitted to the Contracting Officer a minimum of 15 calendar days prior to the desired date of interruption, unless otherwise specified. See paragraph FACILITY/UTILITY/SERVICE OUTAGE REQUIREMENTS herein for additional details and requirements.

- b. Work in certain areas and/or buildings may requiring continuous escorting by a Government employee. See Section 01 11 00.00 22 SUMMARY OF WORK (PWD ME) for further information on Government escorts.
- c. Coordinate the work with the sequencing/phasing requirements outlined in Section 01 11 00.00 22 SUMMARY OF WORK (PWD ME) within paragraph PROJECT SEQUENCING REQUIREMENTS.

#### 1.4 CONTRACTOR ACCESS AND USE OF PREMISES (PNSY)

##### 1.4.1 Portsmouth Naval Shipyard Regulations

Notify the Contracting Officer 21 calendar days in advance for any wide loads. Additional access limitations and coordination with the Contracting Officer may apply.

Ensure that personnel employed on the Portsmouth Naval Shipyard become familiar with and obey Portsmouth Naval Shipyard regulations including safety, fire, traffic, and security regulations. Keep within the limits of the work and avenues of ingress and egress. Wear appropriate personal protective equipment (PPE). Do not enter restricted areas unless required to do so and until cleared for such entry.

Ensure all Contractor equipment, including delivery vehicles, are clearly identified with their company name.

##### 1.4.1.1 Subcontractors and Personnel Contacts

Provide a list of contact personnel of the Contractor and Subcontractors including addresses and telephone numbers for use in the event of an emergency at least 15 days prior to the preconstruction meeting. As changes occur and additional information becomes available, correct and change the information contained in previous lists.

##### 1.4.1.2 Additional Personnel Requirements

##### 1.4.1.1.1 General Construction and Finish Work

General construction and finish work on the Portsmouth Naval Shipyard must be performed by U.S. firms using U.S. citizens. General construction includes construction activities such as building sitework, utilities, foundations, structure, and enclosure or shell, including doors, windows, and facade work. Finish Work includes construction activities such as insulation, floor, partition, and ceiling systems; cabinet work; conveyor systems; specialties; building furnishings, fixtures, and equipment; and mechanical and electrical services and equipment including those specialized for fire protection, security, communication, control, energy conservation, safety, comfort, convenience, and similar purposes.

#### 1.4.1.1.2 Electronic Security Systems Equipment

Electronic Security Systems equipment such as processing control units, workstations, field panels, sensors, high security locks, card readers, cable installation, and system programming, testing and training must be performed by U.S. companies using U.S. citizens who have been subjected to a trustworthiness determination.

#### 1.4.1.2 Installation Access

- a. Obtain access to the Portsmouth Naval Shipyard through participation in the Defense Biometrics Identification System (DBIDS). Requirements for Contractor employee registration, and transition for employees currently under Navy Commercial Access Control System (NCACS), are available at <https://www.cnic.navy.mil/Operations-and-Management/Base-Support/DBIDS/>. No fees are associated with obtaining a DBIDS credential.

##### 1.4.1.2.1 Registration for DBIDS

Registration for DBIDS is available at <https://www.cnic.navy.mil/Operations-and-Management/Base-Support/DBIDS/>. PNS has an online appointment system. Appointments may be made using <https://kiosk.na4.qless.com/kiosk/app/home/191>. Procedure includes:

- a. Present a letter or official award document (i.e. DD Form 1155 or SF 1442) from the Contracting Officer, that provides the purpose for access, to the Portsmouth Naval Shipyard's Pass and Identification/Security Office representative.
- b. Present two (2) forms of valid identification, such as a passport or Real ID Act-compliant state driver's license.
- c. Provide completed SECNAV FORM 5512/1 to the Portsmouth Naval Shipyard's Pass and Identification/Security Office representative to obtain a background check. This form is available for download at <https://www.cnic.navy.mil/Operations-and-Management/Base-Support/DBIDS/>.
- d. Upon successful completion of the background check, the Government will complete the DBIDS enrollment process, which includes Contractor employee photo, fingerprints, base restriction and several other assessments.
- e. Upon successful completion of the enrollment process, the Contractor employee will be issued a DBIDS credential, and will be allowed to proceed to worksite.

All Contractors who possess a Commercial Access Control (CAC) System Card are also required to submit an access request (5512) to support a valid purpose to be on the Portsmouth Naval Shipyard. A second form of valid ID may also be required, if requested, upon arrival at the Portsmouth Naval Shipyard's Entrance Gate. All personnel without CAC cards will need two (2) forms of approved identification for access to the Portsmouth Naval Shipyard.

##### 1.4.1.2.2 DBIDS Eligibility Requirements

Throughout the length of the contract, the Contractor employee must

continue to meet background screen standards. Periodic background screenings are conducted to verify continued DBIDS participation and installation access privileges. DBIDS access privileges will be immediately suspended or revoked if at any time a Contractor employee becomes ineligible.

An adjudication process may be initiated when a background screen failure results in disqualification from participation in the DBIDS, and Contractor employee does not agree with the reason for disqualification. The Government is the final authority.

#### 1.4.1.2.3 DBIDS Notification Requirements

- a. Immediately report instances of lost or stolen badges to the Contracting Officer.
- b. Immediately collect DBIDS credentials and notify the Contracting Officer in writing under the following circumstances:
  - (1) An employee has departed the company without having properly returned or surrendered their DBIDS credential.
  - (2) There is a reasonable basis to conclude that an employee, or former employee, might pose a risk, compromise, or threat to the safety or security to the Portsmouth Naval Shipyard or anyone therein.
- c. Prime contractor is responsible for recovering any badges that are no longer required, including from workers who are no longer employed by prime or subs, and immediately turning badges into the Pass/ID Office. Failure to maintain accountability of issued badges could cause delays in future badge requests. Contracts are warned that badges are checked for currency and any badge not used within 30 days will be disabled.

### 1.5 PORTSMOUTH NAVAL SHIPYARD (PNSY) REGULATIONS

#### 1.5.1 Radiological

##### 1.5.1.1 Radiological Indoctrination (PNSY)

All personnel working at the Portsmouth Naval Shipyard are required to view a 15 minute video briefing on radiological postings and controls in use at the Portsmouth Naval Shipyard. The briefing will be given at the Pass Office prior to issue of security badges and vehicle passes.

Any employee who disregards, alters, moves, or otherwise tampers with a radiological posting, or who disobeys a radiological instruction, may be removed from the Portsmouth Naval Shipyard and denied future access.

##### 1.5.1.2 Yellow Materials (PNSY)

Do not use yellow or orange-yellow colored materials at the Portsmouth Naval Shipyard for the following purposes: Protective clothing, hoods, sheeting, tarpaulins, polyethylene bottles or other containers, tapes, bags, banding, identification marks on tools, boundary markers, ribbons, vent ducts, temporary erosion control devices, survey ribbon, etc. Contact the Contracting Officer for a list of yellow items that have been approved for use on the Portsmouth Naval Shipyard. Dispose of generated yellow colored waste off of the Portsmouth Naval Shipyard. Portsmouth

Naval Shipyard refuse containers must not be used for disposal of yellow colored waste materials. Yellow colored items such as described above are of special significance within the Portsmouth Naval Shipyard and are subject to strict controls. Yellow colored Contract generated debris must be bagged in non-translucent containers, and promptly removed from the Portsmouth Naval Shipyard.

#### 1.5.1.3 Smoke Detectors (PNSY)

Ionization type smoke detectors and duct smoke detectors contain radioactive material and are prohibited from use on the Portsmouth Naval Shipyard. Photoelectric smoke detectors are the only type authorized for use on the Portsmouth Naval Shipyard.

#### 1.5.1.4 Radioactive Sources (PNSY)

All Contracts involving radiation generating devices must conform to the requirements listed in Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME) and U.S. Army Corps of Engineers Safety Manual EM 385-1-1.

#### 1.5.2 Laser Control

Comply with laser safety requirements under 21 CFR 1040 and ANSI Z 136.1-1986 for any work under this Contract utilizing lasers.

#### 1.5.3 Energy Conservation

In cooperation with Government representatives, participate in an active program directed toward the efficient use of energy.

#### 1.5.4 Fire Prevention (PNSY)

Require employees to become familiar with fire prevention regulations within the Portsmouth Naval Shipyard to include the proper method of turning in a fire alarm, storage of flammable and combustible materials, and control of combustible waste and trash. Any "Hot Work" (i.e. welding or cutting) requires a Hot Work Permit prior to commencing such work. Refer to paragraph HOT WORK PERMIT in Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME) for the requirements.

#### 1.5.5 Identification and Control of Seamed (Welded) Pipe and Tubing (PNSY)

Submarine Safety regulations prohibit the use of seamed (welded) pipe or tubing within the Portsmouth Naval Shipyard, unless such pipe or tubing is identified and controlled so as to prevent its inadvertent substitution for seamless pipe or tubing. The following requirements apply and will be strictly enforced:

Any seamed (welded) copper-nickel, carbon steel, carbon-moly steel, stainless steel, nickel-chromium-iron alloy, or nickel-copper pipe or tubing intended for use on the Portsmouth Naval Shipyard must be identified in the following manner PRIOR TO DELIVERY TO THE PORTSMOUTH NAVAL SHIPYARD:

Use a lead-free white paint, to mark a 24-inch long stripe and the word "welded" alternately along the entire length of the pipe or tubing. Apply a one-half inch wide stripe unless the size of the pipe or tubing requires use of a narrower stripe.

Maintain positive control over seamed pipe or tubing until worked into place or removed from the Portsmouth Naval Shipyard.

Seamless pipe or tubing may be substituted for any seamed (welded) pipe or tubing specified in the technical specifications.

The above requirements do not apply to square or rectangular tubing, copper or brass pipe or tubing, or to piping or tubing which has been incorporated into equipment or fixtures prior to delivery to the Portsmouth Naval Shipyard.

#### 1.5.6 Pesticide and Herbicide Control

Do not apply pesticides nor herbicides unless specifically required by this Contract. Where application of pesticides or herbicides is required, provide the submittals required by the specification and obtain written approval prior to any application. The Contracting Officer will be required to review and approve pesticides or herbicides submittals.

#### 1.5.7 Smoking Policy

In accordance with NAVFAC policy, smoking is prohibited within and outside of all buildings on the Portsmouth Naval Shipyard, except in designated smoking areas. This applies to existing buildings, buildings under construction and buildings under renovation. Discarding tobacco materials other than into designated tobacco receptacles is considered littering and subject to fines. Smoking is not permitted within 20 feet of air intakes, doorways, or windows.

#### 1.5.8 Portal Crane Clearance Zone (PNSY)

Ensure there is no construction debris or materials within the Crane Clearance Zone (e.g., between the painted yellow lines on each side of the rail) unless a rail outage/securement has been approved.

### 1.6 WORKING HOURS (PNSY)

Regular working hours will consist of a period between 7 AM and 11 PM, Monday through Friday, and 7 AM Saturday through 11 PM Sunday. Federal holidays will be treated as weekend days, and regular working hours will be between 7 AM and 11 PM. The regular working hours must be confirmed with the Contracting Officer.

Working on Weekends/Federal Holidays: The Contractor must submit the PWD ME Contractor Weekend Worklist to the Contracting Officer by 12 PM on the Wednesday prior to the requested work weekend/Federal Holiday. If the Contractor fails to submit the Weekend Worklist, there are no guarantees that the Contractor will be allowed to work.

#### 1.6.1 Work Outside Regular Hours (PNSY)

Work outside regular working hours requires Contracting Officer approval. Provide written requests fifteen (15) calendar days prior to such work to allow arrangements to be made by the Government for inspecting the work in progress and to allow scheduling of full time escorts in the building(s) if required. During periods of darkness, the different parts of the work must be lighted in a manner approved by the Contracting Officer.

As part of the requests, provide the specific dates, hours, location(s), type(s) of work to be performed, Contract number, and project title. Based on the justification provided, the Contracting Officer may approve work outside regular hours.

#### 1.7 WORK IN OCCUPIED AND EXISTING BUILDING(S)

The Contractor can expect to be working in existing buildings which are occupied. These buildings include, but are not limited to, Buildings 72 and Building 242. The existing buildings and its contents must be kept secure at all times. Provide temporary closures as required to maintain security as directed by the Contracting Officer. Provide dust covers or protective enclosures to protect existing work that remains, and Government material during the construction period. Relocate moveable furniture away from the Contractor's working area(s) as required to perform the work; protect the furniture; and replace the furniture in its original location(s) upon completion of the work. Leave attached equipment in place and protect it against damage, or temporarily disconnect, relocate, protect, and reinstall it at the completion of the work. If determined necessary by the Contracting Officer, the Government will remove and relocate other Government property in the areas of the buildings scheduled to receive work. After providing written notification, allow 15 calendar days for the Government to relocate Government property.

#### 1.8 FACILITY/UTILITY/SERVICE OUTAGE REQUIREMENTS

Outages are required when normal system operation is or could be impacted for any Portsmouth Naval Shipyard service or thoroughfare, including but not limited to roadways, parking spaces, crane rail, railroads, and utility services (i.e., water, sanitary sewer, storm sewer, electric service, fire alarm). This situation can occur when inspecting, repairing, or upgrading utility systems and equipment, buildings, and structures (facilities). These outages may affect one or several buildings, facilities, production processes, and/or geographical locations. Although most outage requirements are addressed in this section, the entire specification must be reviewed for additional outage requirements.

##### 1.8.1 Operation of Portsmouth Naval Shipyard Utilities/Services

The Contractor shall make utility/service cut overs after normal working hours or on weekends/Federal holidays unless otherwise specified/stated on the contract drawings or approved by the Contracting Officer. This cut over time includes time for deactivation and reactivation. Conform to procedures required in paragraph WORK OUTSIDE REGULAR HOURS (PNSY) herein. This includes interruption/outage to water, sanitary sewer, storm sewer, telecommunication services (telephone, internet, radio), electric service, air conditioning, heating, fire alarm, compressed air, and other utility services. Anticipated costs must be included in the bid.

The Contractor shall ensure that new utilities/service are complete, except for the connection, before interruption existing services.

The Contractor must not operate nor disturb the setting of control devices in the Portsmouth Naval Shipyard's utilities/service systems, including water, sewer, electrical, air and steam services, except as otherwise noted herein. The Government will operate 480V and 15KV utility systems for the purposes of securing the systems. The Contractor must notify the Contracting Officer giving 15 calendar days' notice when such operation is

required. The Contractor is responsible for lockout/tagout and grounding; refer to the requirements in Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME). The Contractor shall perform updates to control settings required as per the scope of work.

Connection to Existing Sanitary Sewer Line: Provide positive verification that the existing line conveys sanitary sewer; verify line is not incorrectly connected to a storm drain.

#### 1.8.2 Outage Request Requirements

The outage request process includes development of an outage plan and package, coordination meetings to promote Shipyard and stakeholder understanding and alignment on outages, submittal of the outage request package, and Government approval.

Outages involving Critical Shipyard Infrastructure require a specific Risk Analysis and Risk Mitigation Plan as outlined in paragraph CRITICAL SHIPYARD INFRASTRUCTURE REQUIREMENTS. The Critical Infrastructure Risk Analysis and Risk Mitigation Plan must be submitted to the Contracting Officer for review and approval 15 calendar days prior to the submission of the outage request.

Significant outages required to execute the work may be outlined in the Contract Documents. The Contract Documents do not include all the outages that will be required to support the execution of all work. The Contractor is responsible for identifying all required outages and for all outage request packages.

All outage request packages must be submitted to the Contracting Officer, who will then submit to the Back Shift Representative for final stakeholder concurrence. Submission of an outage request package without prior coordination efforts with the Government, including but not limited to the Outage Coordination Meeting, may result in rejection/denial of the outage request. Any outage requests denied due to incomplete stakeholder alignment or information required to support the requested outages will not be justification for a delay claim. Outage request packages must be submitted at least 15 calendar days in advance of the target outage date.

The Contracting Officer will provide the Outage Request Form and the local Outage Instruction.

The Outage Coordination Meetings referenced below are intended to provide a forum to review the outage plan and information required to support outage reviews.

At a minimum, each outage request package must include the following:

- 1) Specific location/system requiring the outage (i.e., utility, roadway, parking space, crane rail).
- 2) Duration and timing of outage.
- 3) Scope of work required for the outage.
- 4) Outage work plan, including organization responsible for each step to accomplish the outage.
- 5) Adequate sketches/drawings that clearly depict location,

situation, and relevant information/interfaces.

- 6) Scope of outage impact, identifying specific affected systems and stakeholders.
- 7) Hazardous energy control, if applicable.
- 8) For Critical Shipyard Infrastructure (see paragraph CRITICAL SHIPYARD INFRASTRUCTURE REQUIREMENTS) a Critical Infrastructure Risk Analysis and Risk Mitigation plan is required.
- 9) If applicable, include LOTO boundaries and a description of the means to fulfill energy isolation requirements in accordance with EM 385-1-1. Some examples of energy isolation devices and procedures are highlighted in EM 385-1-1. In accordance with EM 385-1-1, where outages involve Government or Utility personnel, coordinate with the Government on all activities involving the control of hazardous energy. These activities include, but are not limited to, a review of Hazardous Energy Control Program (HECP) and Hazardous Energy Control (HEC) procedures, as well as applicable Activity Hazard Analyses (AHAs). In accordance with EM 385-1-1 and NFPA 70E, work on energized electrical circuits for an outage must not be performed without prior Government authorization. Government permission is considered through the outage process and submission of a detailed AHA. Energized work permits are considered only when de-energizing introduces additional or increased hazard or when de-energizing is not feasible.

#### 1.8.2.1 Additional Outage Requirements

The Three Week Look Ahead schedule must include upcoming outages planned for that three week period. Outage planning must start early in the construction process to allow adequate coordination and alignment with affected stakeholders and to integrate timing with critical shipyard operations.

##### a. Outage Coordination Meeting

Outage Coordination Meetings are to be held as necessary, prior to submittal of an outage request package. Refer to Paragraph OUTAGE COORDINATION MEETINGS in Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME) for additional information.

##### b. Outage Safety Review Meeting

Outage Safety Review Meetings are to be held prior to any outages that require hazardous energy control (HEC). Refer to Paragraph OUTAGE SAFETY REVIEW MEETINGS in Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME) for additional information.

#### 1.9 CRANE AND RAILROAD TRACKAGE INTERRUPTIONS (PNSY)

Crane and railroad trackage are facilities that are subject to strict scheduling and outage approvals. When Contract work is planned within 10' adjacent to ground level trackage (that extends below pavement depth) or on ground level track, submit written requests for Outages & Securements a minimum of 15 calendar days prior to the desired date of interruption to the Contracting Officer. Coordination/alignment on the desired date of

interruption should be accomplished with the crane department (Code 722) before submitting the written request. (See Contracting Officer Representative for Track Outage & Securement Request Forms.)

A. Track Outage is required for:

Any excavation, that is within 10 feet of a rail that will extend below depth of the pavement.

Any work performed that will penetrate a track foundation.

Any work involving trackage system replacement or repair.

Work must not be conducted in affected areas until a written approval to the request for outage in accordance with the requirements specified in Paragraph FACILITY/UTILITY/SERVICE OUTAGE REQUIREMENTS is received.

B. Track Securement:

Track Securement differs from Track Outage in that it does not affect track certification. Track Securement requests must be prepared and submitted to the Contracting Officer, via the outage request process outlined in paragraph OUTAGE SUBMITTAL REQUIREMENTS herein, to obtain scheduling approval from Code 740.2 before work commences that would curtail the use of tracks (e.g., placing equipment or hoses within the crane envelope or within the defined Crane Clearance Zones). Track Securement requests must be prepared using the Request for Track Securement form, which will be provided by the Contracting Officer.

No work must be conducted in affected areas until a written approval to the request for securement is received.

1.10 WORK ADJACENT TO OR IMPACTING CIA SECURITY FENCING (PNSY)

Work adjacent to Portsmouth Naval Shipyard Controlled Industrial Area (CIA) fencing is strictly controlled to ensure security is maintained at all times.

"Breaching the fence" is any repair, alteration, or other work which would allow access into the CIA either over, under, or through an opening in a CIA fence.

Work which will breach CIA fencing (including temporary relocation of CIA fencing) is prohibited unless approval has been obtained from Head of Security Operations (Code 1122) and a Portsmouth Naval Shipyard Police representative is at the worksite during the period that the fence has been breached. This approval must be obtained via the Contracting Officer using the outage request process outlined in paragraph OUTAGE REQUEST REQUIREMENTS herein.

The Contractor must submit the outage request for breaching/relocating the CIA security fence a minimum of 30 calendar days prior to performing the work.

Conditions which breach the fence must be eliminated during all non-work periods to the satisfaction of the Portsmouth Naval Shipyard Police representative. Do not leave the worksite until such conditions are eliminated. All materials used to close openings in fencing and method of installation must be the same type and construction as adjacent,

undisturbed CIA fencing.

The clear zone (10 ft on the inside & outside of the security fence) adjacent to CIA fencing must remain clear of vehicles, materials, equipment or tools. Contractor personnel must be at the location throughout the entire time of any off-loading or work. Under no circumstances shall vehicles, materials, equipment, or tools be left unattended in the clear zone. Any work within the clear zones requires approval from Portsmouth Naval Shipyard Security. Any requests to work in the clear zone must be submitted via the outage request process a minimum of 30 calendar days prior to performing the work.

The only outage exception is for short term (e.g., less than 4 hours) temporary off-loading of materials in the CIA clear zone, which must have prior Shipyard Security approval (Code 1122 verbal or email). During temporary off-loading, Contractor personnel must be at the location throughout the entire time. Under no circumstances shall vehicles, materials, equipment, or tools be left unattended in the clear zone.

#### 1.10.1 Violation of CIA Security Fencing Requirements

If the Contractor violates the security requirements related to the CIA Fencing, Security will issue a Security Deficiency Log (SDL). Upon receiving a SDL, the Contractor must take immediate corrective actions as directed in the SDL including responding to the SDL with documentation of the corrective actions taken and what actions are being taken to prevent recurrence of any further violations. Depending on the security violation, the Contractor may be required to have a Security Stand Down in which all staff including subcontractors will need to be present for full review of the PNSY Security Requirements.

If a second offense occurs, the Contractor will have a Security Stand Down in which all staff including subcontractor will need to be present for full review of the PNSY Security Requirements.

If a third offense occurs, the Project Superintendent is subject to removal by the Contracting Officer for non-compliance with security requirements specified in the Contract. Furthermore, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to Stand Downs, stop work orders, or removal of the Project Superintendent are acceptable as the subject of claim for extension of time for excess costs or damages by the Contractor. Work adjacent to Portsmouth Naval Shipyard Controlled Industrial Area (CIA) fencing is strictly controlled to ensure security is maintained at all times.

#### 1.10.2 CIA Lighting

CIA lighting outages must be approved through Code 1122, and temporary lighting must be provided at the Contractor's expense. Refer to Section 01 50 00.00 22 TEMPORARY CONSTRUCTION FACILITIES AND CONTROLS (PWD ME) paragraph TEMPORARY SECURITY LIGHTING for additional requirements.

#### 1.11 WORK ADJACENT TO AN OVERHEAD CRANE

Provide a minimum vertical clearance of three (3) inches between the highest point of the crane and the lowest overhead obstruction. For buildings where truss sag becomes a factor, increase the clearance as necessary to maintain the minimum required clearance.

The horizontal clearance between the end of the crane and the building columns, knee braces or any other obstructions must not be less than two (2) inches with the crane centered on the runway rails. Pipes, conduits, etc. must not reduce this clearance.

The vertical clearance beneath a bridge crane is to be at least three (3) inches. This clearance is not applicable to the hook block unless it is in its up most position.

For work involving installation, adjustment, or replacement of rail fasteners (e.g. clips/bolts), verify the existing crane envelope and clearance measurements around the rail head prior to beginning work. Notify the Government if the work will reduce the clearance between the bridge crane and rail fasteners and ensure newly installed items will not obstruct bridge crane travel.

Notify the Government to verify that crane clearance has been maintained when the work performed may have changed any physical dimensions of objects or structures adjacent to the crane (e.g., changing or servicing lighting fixtures/pendant assemblies, removal and reinstallation of pipes, conduits, junction boxes, etc.). If the crane is not available (e.g., undergoing maintenance, inspection, etc.), verify crane clearance by taking measurements using reference points (e.g., vertical and horizontal distance from the top of crane rail with respect to the crane envelope, vertical distance from the floor with respect to the crane envelope, etc.).

Where bridge cranes within buildings exist, the contractor must ensure that all installations, modifications or other work included in this contract does not create interferences that fall within the bridge crane clearance zone. The bridge crane clearance zone is 2" on any side of the crane, and 3" above or below the crane. It is the responsibility of the contractor to verify the accuracy of the building and crane dimensions in the field prior to conducting work.

## 1.12 FIRE PROTECTION

### 1.12.1 Compliance (PNSY)

Comply with COE EM 385-1-1, NFPA 241, and Portsmouth Naval Shipyard fire regulations. Obtain approval no later than three (3) working days from the Portsmouth Naval Shipyard Fire Chief via the Contracting Officer prior to commencement of hot work operations.

### 1.12.2 Fire Lanes

#### 1.12.2.1 Fire Lane Width

Fire lanes shall be a minimum of twenty (20) feet in width.

#### 1.12.2.2 Vertical Clearance for Fire Lane

Fire lanes shall have a minimum of thirteen (13) feet six (6) inches nominal vertical clearance, which shall be provided and maintained over the full width of the fire lane.

#### 1.12.2.3 Angle of Approach/Departure

Minimum inside turn radius shall be twenty-five (25) feet and minimum

outside turn radius shall be fifty (50) feet.

#### 1.12.2.4 Parking In or Blocking Fire Lanes

Parking in or blocking fire lanes is expressly prohibited for any reason without prior Fire Department approval. Vehicles left unattended in fire lanes are subject to towing. Contractors will be issued a Non-Compliance Notice for vehicles left unattended in fire lanes.

- a. First Offense: The Contractor will remove the vehicle from the Project Site immediately and the vehicle will not be allowed to return to the Project Site for seven (7) days. The Contractor will perform a safety stand down within three (3) days of the incident and the Fire Department shall be invited to attend the safety stand down.
- b. Second Offense: Contractor and Sub-Contractors vehicles will be permanently barred from the Project Site and a Non-Compliance Notice will be issued. Individuals performing deliveries in support of the Project will be allowed but are expected to be onsite for the shortest duration required to perform the delivery, and the driver/operator shall remain in the immediate vicinity of the vehicle at all times.

#### 1.12.2.5 Approval to Temporarily Block a Roadway/Fire Lane

The Contractor may request approval to temporarily block a roadway/fire lane as part of a Road Outage to complete work associated with the project. Approval may only be given by the Fire Chief or his/her assigned representatives. Arrange through the Contracting Officer with the Fire Chief for scheduling the temporary blockage prior to submitting the outage request package. Final approval will be through the outage process. Refer to Paragraph FACILITY/UTILITY/SERVICE OUTAGE REQUIREMENTS of this section for the outage process. In addition to the requirements outlined within Paragraph OUTAGE REQUEST REQUIREMENTS herein, the Contractor must include the following to any outage packages that include a request to temporarily block a roadway/fire lane:

- a. Alternative analysis that discusses whether a practical alternative to the outage exists. The analysis must address the activity purpose, need, and why the activity cannot be completed by:
  - (1) Utilizing, managing, or expanding the work area to avoid the fire lane.
  - (2) Reducing the size, scope, configuration or density of the activity as proposed (phasing).
- c. Illustration showing the location of Contractor equipment during the proposed outage.
- d. Provisions for emergency access during the outage (e.g. a steel plate shall be kept with 10 feet of the excavation).
- e. Additional provisions may be required by the Fire Department on a site by site basis.

### 1.13 SECURITY REQUIREMENTS

#### 1.13.1 Access to the Portsmouth Naval Shipyard (PNSY)

Contract Clause "FAR 52.204-2, Security Requirements and Alternate II" and

the following apply:

Access to areas designated as restricted NAVSEA spaces will require an escort by a Government Representative. Notify the Contracting Officer at least 14 Calendar Days in advance of the date access is required.

Obtain security badges and vehicle passes to enter the Portsmouth Naval Shipyard at the Portsmouth Naval Shipyard's Pass/Security Office. Furnish proof that employees are U.S. citizens to obtain badges to enter the Portsmouth Naval Shipyard.

Complete Department of Homeland Security Form I-9; Employment Eligibility Verification for each employee and furnish proof that employees are U.S. citizens to obtain badges to enter Portsmouth Naval Shipyard.

#### 1.13.2 Application and Issue of Security Badges

"Temporary" Security Badges will be issued to Contractor personnel requiring access to the Shipyard for less than 90 days. Badge(s) will be issued upon satisfactory proof of U.S. citizenship, in the form of an original or certified birth certificate, passport, or naturalization papers. A picture ID is required in addition to satisfactory proof of citizenship.

"Permanent" (photo) Standard Access Control Badges will be issued to Contractor personnel requiring access to the Shipyard for 90 or more days. Contractor personnel will be required to complete an authorization application form for local record check and a personal information sheet. The forms will be furnished to the Contractor following award of any contract resulting from this solicitation, at the time of the Preconstruction Meeting.

In the event access is required to Contract work areas not permitted by the level of security badge issued, such need must be demonstrated and an escort obtained.

STANDARD ACCESS CONTROL BADGES MUST BE ATTACHED TO THE OUTER GARMENT AND DISPLAYED ABOVE THE WAISTLINE AT ALL TIMES WHILE ON THE PORTSMOUTH NAVAL SHIPYARD.

PERSONNEL MUST NOT ENTER AREAS FOR WHICH THEY HAVE NOT BEEN CLEARED. WHERE A NEED HAS BEEN DEMONSTRATED TO ENTER SUCH AREAS, PERSONNEL WILL BE UNDER CONSTANT ESCORT BY PERSONNEL WHO HAVE BEEN CLEARED. FAILURE TO ADHERE TO POSTED SECURITY REQUIREMENTS MAY RESULT IN REMOVAL OF THE EMPLOYEE FROM THE PORTSMOUTH NAVAL SHIPYARD WITH FUTURE ACCESS DENIED.

#### 1.13.3 Application and Issue of Vehicle Passes for Entry into Portsmouth Naval Shipyard's Controlled Industrial Areas (CIA)

Vehicular access to the CIA must be minimized and all vehicles must comply with the following requirements:

Vehicles must visibly display a CIA vehicle entry pass and inspection pass from the Commercial Vehicle Inspection Station (CVIS), Building 386. CIA passes will only be issued to company owned or leased vehicles or rental vehicles rented in the company name. CIA passes will be issued on weekends and holidays at the Installation Gate. Personnel not possessing the level security badge required for CIA access must be accompanied by a properly badged escort to obtain the CIA vehicle pass.

Vehicles will only be allowed in the CIA for the transportation of tools, parts, and materials to and from the worksite. An exception to this policy, employees may be transported to and from the worksite after full vehicle inspection at CVIS if a specific security plan has been developed and approved by the Portsmouth Naval Shipyard Security Officer.

Parking of company owned vehicles not utilized in the execution of construction activities (e.g. not a working truck or specialty vehicle) within the CIA or in any project laydown space is prohibited.

For Vehicles remaining in the CIA for more than 24 hours: Obtain a CIA Overnight Parking Permit from the PWD ME Construction ET via the Contracting Officer. Vehicles without this pass are subject to being towed. Passes will only be issued to those demonstrating a valid reason as determined by Portsmouth Naval Shipyard Security.

#### 1.13.4 Application and Issue of Crane Passes (PNSY)

Comply with EM 385-1-1. For Crane Passes at the Portsmouth Naval Shipyard to be valid, the Certificate of Compliance for Load Handling Equipment (LHE) and Rigging (ENG Form 6209) must be completed and accepted.

#### 1.13.5 Return of Badges and Vehicle Passes

Ensure all vehicle access permits and personnel badges are returned to the Portsmouth Naval Shipyard Security Officer when the need has ended. Account in writing for each missing pass or badge prior to final payment being made on the Contract. Any vehicle passes issued must be returned to Portsmouth Naval Shipyard Security daily.

#### 1.13.6 Security Responsibilities (PNSY)

Employees must not transport, drink, or have in their possession any alcoholic beverages. Possession of any controlled substances without a physician's prescription is also prohibited. Any employee appearing to be under the influence of intoxicating liquor or narcotics will be apprehended by Portsmouth Naval Shipyard Police, escorted off of the Portsmouth Naval Shipyard, and turned over to the local Police Department.

Any vehicle found to contain controlled substances, including usable residue, may be seized and impounded. Within 24 hours of the work day following any vehicle seizure, the Portsmouth Naval Shipyard Police will have determined whether forfeiture of the vehicle is required. If not, the vehicle will be returned to the owner or authorized agent. If the vehicle is determined to be appropriate for forfeiture, the Portsmouth Naval Shipyard's Legal Officer will notify the Drug Enforcement Administration of such seizure and impoundment, for initiation of forfeiture proceedings pursuant to Title 21, U.S. Code, Section 881. Such actions may be taken regardless of whether the owner/operator of the vehicle had knowledge of the presence of drugs in the vehicle. The Government may pursue criminal or other disciplinary actions pursuant to Title 18, U.S. Code, Section 1382.

Possession of firearms, ammunition, and/or explosives is prohibited. In the event explosives are required for construction work, specific handling requirements and approvals must be obtained from the Portsmouth Naval Shipyard Security Officer via the Contracting Officer.

Cameras, video equipment, or similar photographic equipment must not be introduced into nor removed from the Portsmouth Naval Shipyard. In the event such equipment is required for performance of Contract work, approvals must be obtained from the Portsmouth Naval Shipyard Security Officer via the Contracting Officer.

Weapons (firearms, personal knives with blades 2-1/2 inch long or greater, Mace, Pepper Spray etc.) are not permitted aboard the Portsmouth Naval Shipyard.

At a minimum, all Superintendents, QC Managers, and SSHOs (and anyone acting in this capacity) must have a mobile phone on their persons any time while work is occurring at the Contract jobsite(s). The phone number(s) associated with these phones must be provided during the preconstruction meeting and work will not be allowed to proceed without one.

Laptops and any other computer, regardless of form factor, must not be introduced nor removed from the Portsmouth Naval Shipyard without authorization. Only business use computers are allowed. Personally owned computers are not authorized on the Portsmouth Naval Shipyard. If a computer is required to perform work on the Portsmouth Naval Shipyard, a Visitors Portable Computer Equipment Registration form must be completed and submitted for approval. These forms can be obtained and completed at the pass office upon entrance to the Portsmouth Naval Shipyard or through the Portsmouth Naval Shipyard POC.

Any computing devices that also have or had an installed camera, must follow the same requirements as cell phones. If the computing device is visiting a NAVSEA space, it cannot have a camera. If the device has a camera, the only acceptable remediation is that the camera be professionally removed or drilled out and the resulting void must be filled with an opaque epoxy.

In the event that a camera is required for the performance of the Contracted work, approval must be obtained from the C1120 Security Office. All requests for camera use and deviations must come to C1120 through the Contracting Officer. Authorizations and approved computer registrations must remain with the devices and be presentable upon request. Devices without a documented approval or observed being used in a manner that violates the terms of the Visitor Portable Computer Equipment Registration agreement are subject to search and seizure.

Basic guidance for use of Electronic Devices at Portsmouth Naval Shipyard: Obtain Contracting Officer approval for intent to use any electronic device which has the capability to record, copy, store, export and transmit data, photography, digital images, video or audible information, inside the CIA or any NAVSEA controlled spaces. Provide the manufacturer's data describing the electronic capabilities of the device(s).

Use of wireless networking and communication on the Portsmouth Naval Shipyard requires prior authorization. Communication devices such as cellular hotspots and wireless routers must also be registered using the same Visitors Portable Computer Equipment Registration. This does not include air-cards and straight cellular data. It does include any device that transmits or broadcasts Wi-Fi, including cellular phones with the personal hot-spot feature enabled.

Broadband internet connections must be authorized prior to use on the

Portsmouth Naval Shipyard. All requests for physical cable service from an internet service provider (ISP) must be authorized and coordinated through Code 109. Work through the Contracting Officer to request broadband access.

Driver use of a hand-held cellular phone in a moving vehicle on the Portsmouth Naval Shipyard is prohibited. This prohibition does not include hands-free cellular phone devices. Hands-free devices include console/dash-mounted or otherwise secured cellular phones with integrated features such as voice-activation, speed dial, speakerphone or other similar technology for sending and receiving calls.

Driver use of any portable, personal listening device worn inside the aural canal, around or covering the driver's ear while operating a motor vehicle, is prohibited. Listening devices include wired or wireless earphones and headphones (including blue tooth or similar technology), and do not include hearing aids or devices designed and required for hearing protection.

The use of radar or laser detection devices to indicate the presence of speed recording instruments or to transmit simulated erroneous speeds is prohibited in accordance with OPNAVINST 5100.2H.

Indoctrinate personnel on access limitations to ensure security control is maintained as an integral part of their work pattern and habit.

Unescorted personnel found in security areas requiring a higher level clearance than the level represented by the badge displayed will be removed from the area with possible confiscation of security badges and vehicle passes.

#### 1.13.6.1 Portable Electronic Devices Policy (PNSY)

A PED is a portable electronic device that is easily transportable and has the capability to record, copy, store, export, or transmit data, photography, digital images, video or audible information. Examples of PEDs include, but are not limited to: cell phones, fitness trackers, smart watches, watches with input capability, tablet, laptops, media devices, Bluetooth consumer electronics, cellular transceivers, and portable diagnostic equipment.

PEDs are prohibited within spaces authorized for processing classified information or within spaces where any classified discussion is taking place, except as otherwise authorized. PEDs are permitted in other areas on the Portsmouth Naval Shipyard subject to the usage restrictions as outlined below.

##### 1.13.6.1.1 PEDs in Classified Spaces

These spaces include, but are not limited to, open storage areas, NWAs, Controlled Access Areas (CAA), secure rooms, vaults, occupied dry docks, shipboard, and applicable restricted areas).

PEDs with limited capabilities are permitted.

The following capabilities are prohibited on PEDs in classified spaces:

- a. Cellular and Wi-Fi transceivers.
- b. Photographic, video capture, recording, and transmission, microphone,

- and/or audio capture, recording, and transmission capabilities.
- c. Installed removable media unless otherwise authorized.
- d. Capability to perform radio frequency transmission at greater than 100 milliwatts (mw) Equivalent Isotropically Radiated Power.

#### 1.13.6.1.2 PEDs in U-NNPI Spaces

These spaces include where U-NNPI is processed, transmitted, stored, or discussed (e.g., Security Islands (SIs), CNIAs).

PEDs are permitted as follows:

- a. Contractor owned PEDs are permitted in these areas provided they have their photographic and video capabilities (logically or physically) disabled and they have been marked to identify that the capability is disabled.
  - (1) Contractor owned PEDs, other than cell phones, that do not have markings to identify that the capability is disabled are required to have the PEDs reviewed by Security Services (Code 1123) and Code 109 (if applicable) to ensure the capabilities have been disabled. This will be documented via a laptop registration or camera permit.
  - (2) Personal and Contractor owned cell phones are authorized inside of CNIA spaces if the camera(s) is (are) removed and the void filled with an epoxy or if it meets the requirements of 1.13.6.1.2.a. Additionally, the camera application on the device must indicate that it is disabled.
- b. For SI spaces and inside the CIA, camera capable PEDs (unmodified) are permitted. Although these devices are permitted, use of these devices to take photographs, record video, or record audio is prohibited.

#### 1.13.6.1.3 Violations

Discovery of PEDs in prohibited areas, or discovery of prohibited materials (including Government information or digital photographs that have not been authorized for public release on PEDs) on a personally owned PED, may result in the immediate confiscation of the device by Code 1120 with referral to the appropriate authorities for investigation and, if warranted, personnel action or prosecution. The authority to confiscate a personal PED based on reasonable suspicion for review of images, recordings, or videos is the responsibility of Code 1120 or law enforcement personnel.

Contractors and subcontractors found to be in violation of the Portsmouth Naval Shipyard PED Policy will have the violation reported to the Contracting Officer and may be subject to criminal charges. The penalties for any contractor or subcontractor personnel who are found to be in possession of a PED with prohibited capabilities in violation of this policy will be evaluated on a case by case basis, but at a minimum, the Standard Access Control Badge (SACB) and Defense Biometric Identification System card will be confiscated. Access to the installation will be denied and a Security Deficiency Log (SDL) will be issued. If the violation is more severe (e.g., PED with prohibited capabilities found with pictures inside of a NAVSEA controlled space, etc.) or repeat in nature violations, contractor or subcontractor personnel may be permanently barred from access to NAVSEA controlled spaces.

#### 1.13.7 Access to Unclassified Information

Access to U.S. Navy technical information manuals, documents, drawings, plans, specifications, and other information (e.g., photos, presentations, renderings, papers, etc.) is Government property and restricted to an official need-to-know basis. Handle, control, and safeguard to prevent oral, visual, and documentary disclosure to the public, to foreign sources, and to personnel not having an official need-to-know.

#### 1.13.8 Disclosure of Information

- a. Do not release to anyone outside the Contractor's organization any unclassified information, regardless of medium (e.g., hard copies, computer files, film, tape, document), pertaining to any part of this Contract or any program related to this Contract, unless the Contracting Officer has given prior written approval.
- b. Requests for approval under paragraph (a) must identify the specific information to be released, the medium to be used, and the purpose for the release. Submit the request to the Contracting Officer at least 10 business days before the proposed date for release.
- c. The Contractor agrees to include a similar requirement, including this paragraph (c), in each subcontract under this Contract. Subcontractors must submit requests for authorization to release through the Prime Contractor to the Contracting Officer.

#### 1.13.9 Portsmouth Naval Shipyard Operations Security Statement

During the course of this Contract, in addition to those restrictions, instructions, and guidelines delineated in the Contract Statement of Work, Contract Data Requirements List (CDRL), and/or other references provided, adhere to the following minimum requirements in support of the Portsmouth Naval Shipyard (PNS) OPSEC Program:

Introduction of personal electronic devices, laptops, tablet PCs, cellular phones, cameras, recording devices, and data recording/storage devices into Government spaces is STRICTLY controlled and forbidden in most cases. Company issued equipment required for the performance of work must be approved by the PNS Code 1120 Security Office. Photography and recording is not allowed except for official use and by permit only. Photographs will be reviewed by Code 1123.2 to ensure sensitive information is not revealed.

Do not discuss Government operations in public or over unprotected or unencrypted communications. Do not post to company websites, publications, newsletters or other media, any images, data, or information that reveal sensitive Government operations, personnel, equipment, and/or classified or controlled unclassified information. When in doubt, company press releases related to this Contract must be coordinated through the Contracting Officer's Representative (COR) or Technical Point of Contact, as applicable, and in conjunction with PNS Public Affairs Office (PAO).

Due to observation of events, operations, physical changes, etc. which may reveal National Security Information or Naval Nuclear Propulsion Information (NNPI), specific restrictions are needed to preclude unintentional release of this information to unauthorized parties. (Unauthorized disclosure and transfer of National Security Information is punishable under 18 USC § 793.) Therefore, do not disclose to

unauthorized third parties or post to unofficial sites (including Social Networking sites) any images, data or information, or observed events that reveal sensitive Government operations, personnel, equipment, including, but not limited to:

Tactics, techniques and procedures, production or work schedules, any visible or concealed modifications, upgrades, additions to vessels, weapons or equipment; increases, changes, or decreases in work/deployment frequency or Government personnel, vehicle, vessel movements; specialized equipment orders, deliveries, shipments, etc. Unauthorized disclosures and attempts to solicit this type of information by unauthorized third parties or others not affiliated with this Contract must be reported to PNS Code 1120 Security and/or PNS Police Department. Non-Disclosure requirements remain in effect during the duration of this Contract and indefinitely thereafter.

Government issued badges and identification must be removed and/or concealed from plain sight when off PNS and must not be left in vehicles or unprotected. Badges and passes may not be duplicated, copied, or loaned to others. Lost or stolen identification badges, vehicle passes, etc., must be immediately reported to PNS Code 1120 Security Office and/or PNS Police Department.

It is strongly recommended the Contractor mark and protect related internal production schedules, deliverables, inventories and shortages, and identified vulnerabilities related to production of Government material. Internal company markings (e.g., Business Sensitive, etc.) are appropriate for identifying the aforementioned as sensitive information. All Government information must be destroyed at Contract termination or returned to the Government at the Government's discretion.

#### 1.14 WORK WITHIN PUMPWELLS AND DRY DOCKS (PNSY)

All work completed within the dry docks and pumpwells must have a Flooding Mitigation Strategy Plan. The process for development of this plan must start with a meeting to determine any locations of possible flooding. The plan must cover all penetrations through structures which may be sources of flooding of the pumpwell, the dry dock, or an associated structure. Flooding sources considered include the Piscataqua River as well as surface rain water. The plan must identify the source of flooding, provide a strategy for mitigating flooding from that source and details on when that mitigation will be in place (e.g. pipe that is currently open to the river will have double valve protection when not actively being worked). Provide product data sheets with the plan. The plan must also include an inspection program to verify proper installation and maintenance of all mitigation strategies. The plan must be submitted and approved by the Government prior to commencing the work within the pumpwells and dry docks.

#### 1.15 CONSTRUCTION VEHICLES

Do not utilize any vehicle that will exceed an HS20 wheel load. The use of "off road", "Utility", "ATV", or any vehicles which cannot be legally operated on State roadways or highways is prohibited.

#### 1.16 EMPLOYEE PARKING

Parking on the Portsmouth Naval Shipyard is limited and is not guaranteed. All Contractor and Subcontractor employee privately owned vehicles (POV)

must be parked offsite. Only Contractor company-owned vehicles will be allowed to park on the Portsmouth Naval Shipyard. Refer to Section 01 50 00.00 22 TEMPORARY CONSTRUCTION FACILITIES AND CONTROLS (PWD ME) paragraph EMPLOYEE PARKING PLAN for additional requirements.

Per OPNAV M-5100.23 3604.q.(1)(F), use of motorized (electric, gas, etc.) or human powered scooters, skateboards, roller-skates, roller-blades, and other similar equipment are not authorized in any areas on PNSY.

#### 1.17 PORTSMOUTH NAVAL SHIPYARD 6010 TRAINING

Personnel working inside of or within 10 feet of the coping of the dry dock and its associated structures must have Portsmouth Naval Shipyard 6010 training. Associated structures include pumpwells, service tunnels, altar pits, etc. This training will be provided, at the Portsmouth Naval Shipyard, at no cost and is approximately 4 hours in duration. Coordinate training schedule with the Contracting Officer.

Personnel that complete 6010 training can serve as an escort for 6010 purposes. The escort must be within 10 feet or audio range, whichever is closer, and is responsible for the safety of the personnel they are escorting in an emergency situation.

#### 1.18 CRITICAL SHIPYARD INFRASTRUCTURE REQUIREMENTS

All construction activities (including excavation adjacent to Critical Infrastructure) and outages directly impacting or within three feet of Shipyard Critical Infrastructure are required to have a Critical Infrastructure Risk Analysis and Risk Mitigation Plan. The Contract Documents identify the Critical Infrastructure that could be impacted by the work associated with this project.

The Critical Infrastructure Risk Analysis and Risk Mitigation Plan is the Contractor's responsibility. General information related to project specific outage phasing & sequencing may be provided in the Contract Documents. See Paragraph FACILITY/UTILITY/SERVICE OUTAGE & INTERRUPTIONS PROCESS for Outage Requirements.

The Contractor's proposed means and methods related to any work that may impact Shipyard Critical Infrastructure are subject to Government approval. The anticipated phasing & sequencing for completing this work may be outlined in the Contract Drawings. Any additional work and costs associated with any changes to the phasing & sequencing based on the Contractor's means & methods are the responsibility of the Contractor and will not be a basis for a claim for additional cost and time.

The Contracting Officer will require approval of each CI Risk Mitigation Plan prior to work, and when associated with an outage, it must be submitted along with the Outage Request.

#### DEFINITION:

- a. "Critical Infrastructure" are Shipyard facilities (utilities and structures) that directly affect personnel safety, radiological controls, nuclear and reactor safety, and ship safety and require unhindered reliable operation. This definition is intended to be used in a conservative manner when determining if work impacts Critical Infrastructure, and must be reviewed by the Contracting Officer through appropriate Shipyard personnel in those cases when there is

any question as to the applicability.

- i. Critical structures (and their foundation systems) include: dry dock structures, pump well structures, caissons as well as caisson seat and apron, submarine piers, reactor servicing complexes, crane and rail road rails, and bridges 1 and 2. Also, Radiological Material Storage facilities and Emergency Control Center. All work within three feet of a dry dock pump well and dry dock (when a submarine is docked) must follow Critical Shipyard Infrastructure requirements.
- ii. Critical utilities/services support dry docks and piers with submarines, reactor servicing complexes, Radiological Material Storage facilities, and Emergency Control Center including: dry dock pumping systems (drainage, dewatering, and ASW- both temporary and permanent systems) high voltage electrical systems and low voltage electrical systems, communication systems, high pressure air systems, low pressure air (breathing air), gas lines to the B72, fresh water, firefighting water supply, and high pressure steam.

#### 1.18.1 CRITICAL INFRASTRUCTURE RISK ANALYSIS (RA) AND RISK MITIGATION PLAN (RMP)

The Critical Infrastructure Risk Analysis (RA) and Risk Mitigation Plan (RMP) must include the following:

1. Description of Work: Describe in enough detail to allow someone not involved to have a general understanding of the scope.
2. Risks to Critical Infrastructure:
  - (1) Describe what could go wrong with the work and the impact to Shipyard operations (Air, Water, Electrical Power, Telecom/IT, Rail or Structures), including:
    - (a) Risk Assessment: Evaluate the risk of what could go wrong. (Probability of failure/Severity of Impact. See RISK DETERMINATION TABLE in the Outage Form.)
    - (b) Mitigated Risk Assessment: Evaluate the reduced risk of what could go wrong based on steps in paragraphs WORK CONTROL PLAN and OVERSIGHT outlined below.
  - (1) What could go wrong #2:
    - (a) Risk Assessment #2: Evaluate the risk of what could go wrong. (Probability of failure/Severity of Impact)
    - (b) Mitigated Risk Assessment #2: Evaluate the reduced risk of what could go wrong based on steps in paragraphs WORK CONTROL PLAN and OVERSIGHT outlined below. State why or how the risk is reduced.
3. Work Control Plan:
  - (1) Describe specific steps and actions (how, when, and by whom) to mitigate the risks to Critical Infrastructure that were identified above (Examples only included below).
    - (a) Specific utilities/services in the area will be secured

- prior to work, or, potholing/GPR or other utility/service locating has been performed to identify specific utility/service location and depth, which is included in Preparatory Phase meeting agenda.
- (b) Protective timber matting installed over crane and train rail to prevent damage to rails supporting train and crane movements.
  - (c) Noise/Dust/Vibration. Managed per contract requirements, and to be briefed during Initial Phase meeting.
  - (d) Detailed work plan.
  - (e) Specific selection of equipment/tools for work.
  - (f) Foreman/safety pre-job reviews.
  - (g) Foreman pre-job work brief with crew.

4. Oversight:

- (1) Describe specific oversight work leading up to and for the execution of work (how, when, and by whom) to mitigate the risks to critical infrastructure that were identified above (Examples only included below).
  - (a) Daily Contractor Production Reports.
  - (b) Daily Contractor Quality Control (QC) Reports.
  - (c) QC Manager field visits (include periodicity).
  - (d) Periodic project Coordination Meetings (include parties involved).

PART 2 PRODUCTS

-- End of Section --

SECTION 01 20 00.00 22

PRICE AND PAYMENT PROCEDURES (PWD ME)  
**11/20, CHG 5: 02/25**

PART 1 GENERAL

This Section applies to Design-Bid-Build and Design-Build projects at Portsmouth Naval Shipyard and PWD ME AOR Facilities.

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EP 1110-1-8 (2021) Engineering and Design --  
Construction Equipment Ownership and  
Operating Expense Schedule

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Earned Value Report; G

1.3 EARNED VALUE REPORT

1.3.1 Data Required

This Contract requires the use of a cost-loaded Network Analysis Schedule (NAS). Schedule of Prices must not be used with cost-loaded Network Analysis Schedule (NAS). Use Earned Value Report derived from cost-loaded NAS. Within 30 calendar days from receiving the Notice to Proceed, prepare and deliver to the Contracting Officer an Earned Value Report (construction Contract) as directed by the Contracting Officer. Provide a detailed breakdown of the Contract price, giving quantities for each of the various kinds of work, unit prices, and extended prices. Indirect activities (e.g., meetings, presentations, submittals, surveys, haul road or storage yard maintenance, dust control, security) will not be cost loaded. Evenly distribute the costs across the associated construction activities. Contractor overhead and profit including salaries for field office personnel, if applicable, must be proportionately spread over all pay items and not included as individual pay items.

1.3.2 Payment Schedule Instructions

Payments will not be made until the Earned Value Report from the cost-loaded NAS has been submitted to and accepted by the Contracting Officer.

Additionally, the Earned Value Report must be separated as follows:

a. Primary Facilities Cost Breakdown:

Defined as work on the primary facilities out to the 5 foot line. Work out to the 5 foot line includes construction encompassed within a theoretical line 5 foot from the face of exterior walls and includes attendant construction, such as pad mounted HVAC cooling equipment, cooling towers, and transformers placed beyond the 5 foot line.

b. Supporting Facilities Cost Breakdown:

Defined as site work, including incidental work, outside the 5 foot line.

1.3.3 Schedule Requirements for HVAC TAB

The field work requirements in Section 23 05 93 TESTING, ADJUSTING, AND BALANCING FOR HVAC must be broken down in the Earned Value Report from the cost-loaded NAS by separate line items which reflect measurable deliverables. The value for each pay item listed below will be established on a case by case basis for each Contract. The line items are as follows:

- a. Approval of Design Review Report: The TABS Agency is required to conduct a review of the project plans and specifications to identify any feature, or the lack thereof, that would preclude successful testing and balancing of the project HVAC systems. Submit the resulting findings to the Government to allow correction of the design. The progress payment will not be issued until the report is reviewed and approved.
- b. Approval of the pre-field engineering report: The TABS Agency submits a report which outlines the scope of field work. The report must contain details of what systems will be tested, procedures to be used, sample report forms for reporting test results and a quality control checklist of work items that must be completed before TABS field work commences.
- c. Season I field work: Incremental payments are issued as the TABS field work progresses. The TABS Agency mobilizes to the project site and executes the field work as outlined in the pre-field engineering report. The HVAC water and air systems are balanced and operational data must be collected for one seasonal condition (either summer or winter depending on project timing).
- d. Approval of Season I report: On completion of the Season I field work, the data is compiled into a report and submitted to the Government. The report is reviewed, and approved, after ensuring compliance with the pre-field engineering report scope of work.
- e. Completion of Season I field QA check: Contract QC and Government representatives meet the TABS Agency at the jobsite to retest portions of the systems reported in the Season I report. The purpose of these tests are to validate the accuracy and completeness of the previously submitted Season I report.
- f. Approval of Season II report: The TABS Agency completes all Season II field work, which is normally comprised mainly of taking heat transfer

temperature readings, in the season opposite of that under which Season I performance data was compiled. Compile this data into a report and submit to the Government. On completion of submittal review to ensure compliance with the pre-field engineering report scope, progress payment is issued. Progress payment is less than that issued for the Season I report since most of the water and air balancing work effort is completed under Season I.

#### 1.4 CONTRACT MODIFICATIONS

In conjunction with the Contract Clause DFARS 252.236-7000 Modification Proposals-Price Breakdown, and where actual ownership and operating costs of construction equipment cannot be determined from Contractor accounting records, base equipment use rates upon the applicable provisions of the EP 1110-1-8.

#### 1.5 CONTRACTOR'S INVOICE AND CONTRACT PERFORMANCE STATEMENT

##### 1.5.1 Content of Invoice

Requests for payment will be processed in accordance with the Contract Clause FAR 52.232-27 Prompt Payment for Construction Contracts and FAR 52.232-5 Payments Under Fixed-Price Construction Contracts. Invoices not completed in accordance with contract requirements will be returned to the Contractor for correction of the deficiencies. At least ten (10) working days prior to the invoice being uploaded to WAWF, the Contractor's Quality Control (QC) Manager must review the invoice with the Contracting Officer to ensure accuracy. Include the documents listed below in the requests for payment.

- a. The Contractor's invoice, on NAVFAC Form 7300/30 furnished by the Government, showing in summary form, the basis for arriving at the amount of the invoice. Form 7300/30 must include certification by QC Manager as required by the Contract.
- b. The Earned Value Report from the cost-loaded NAS.
- c. Contractor's Monthly Estimate for Voucher and Contractors Certification (NAVFAC Form 4330) with Subcontractor and supplier payment certification. Other documents, including but not limited to, that need to be received prior to processing payment include the following submittals as required. These items are still required monthly even when a pay voucher is not submitted.
- d. Monthly Work-hour report.
- e. Updated Construction Progress Schedule and tabular reports required by the contract.
- f. Contractor Safety Self Evaluation Checklist.
- g. Updated submittal register.
- h. Solid Waste Disposal Report.
- i. Certified payrolls.
- j. Updated testing logs.

- k. Monthly Progress As-Built, in accordance with Section 01 78 00.00 22 CLOSEOUT SUBMITTALS (PWD ME).
- l. Other supporting documents as requested.

#### 1.5.2 Submission of Invoices

If DFARS Clause 252.232-7006 Wide Area WorkFlow Payment Instructions is included in the Contract, provide the documents listed in above paragraph CONTENT OF INVOICE in their entirety as attachments in Wide Area Work Flow (WAWF) for each invoice submitted. The maximum size of each WAWF attachment is two megabytes, but there are no limits on the number of attachments. If a document cannot be attached in WAWF due to system or size restriction, provide it as instructed by the Contracting Officer.

Monthly invoices and supporting forms for work performed through the anniversary award date of the Contract must be submitted to the Contracting Officer within 5 calendar days of the date of invoice. For example, if Contract award date is the 7th of the month, the date of each monthly invoice must be the 7th and the invoice must be submitted by the 12th of the month.

#### 1.5.3 Final Invoice

- a. A final invoice must be accompanied by the certification required by DFARS 252.247.7023 Transportation of Supplies by Sea, and the Contractor's Final Release. If the Contractor is incorporated, the Final Release must contain the corporate seal. An officer of the corporation must sign and the corporate secretary must certify the Final Release.
- b. For final invoices being submitted via WAWF, the original Contractor's Final Release Form and required certification of Transportation of Supplies by Sea must be provided directly to the respective Contracting Officer prior to submission of the final invoice. Once receipt of the original Final Release Form and required certification of Transportation of Supplies by Sea has been confirmed by the Contracting Officer, the Contractor must then submit final invoice and attach a copy of the Final Release Form and required certification of Transportation of Supplies by Sea in WAWF.
- c. Final invoices not accompanied by the Contractor's Final Release and required certification of Transportation of Supplies by Sea will be considered incomplete and will be returned to the Contractor.

#### 1.6 PAYMENTS TO THE CONTRACTOR

Payments will be made on submission of itemized requests by the Contractor which comply with the requirements of this section, and will be subject to reduction for overpayments or increase for underpayments made on previous payments to the Contractor.

##### 1.6.1 Obligation of Government Payments

The obligation of the Government to make payments required under the provisions of this Contract will, at the discretion of the Contracting Officer, be subject to reductions and suspensions permitted under the FAR and agency regulations including the following in accordance with FAR 32.103 Progress Payments Under Construction Contracts:

- a. Reasonable deductions due to defects in material or workmanship;
- b. Claims which the Government may have against the Contractor under or in connection with this Contract;
- c. Unless otherwise adjusted, repayment to the Government upon demand for overpayments made to the Contractor; and
- d. Failure to maintain accurate "as-built" or record drawings in accordance with FAR 52.236.21 and the contract.
- e. Failure to submit accurate monthly schedule updates in accordance with the contract.

#### 1.6.2 Payment for Onsite and Offsite Materials

Progress payments may be made to the Contractor for materials delivered on the site or for materials stored off construction sites under the following conditions:

- a. FAR 52.232-5(b) Payments Under Fixed Price Construction Contracts.
- b. Materials delivered on the site, but not installed, and off-site materials to be considered for progress payment must be major high cost, long lead, special order, or specialty items, not susceptible to deterioration or physical damage in storage or in transit to the construction site. Examples of materials acceptable for payment consideration include, but are not limited to, structural steel, non-magnetic steel, non-magnetic aggregate, equipment, machinery, large pipe and fittings, precast/prestressed concrete products, plastic lumber (e.g., fender piles/curbs), and high-voltage electrical cable. Materials not acceptable for payment include consumable materials such as nails, fasteners, conduits, gypsum board, glass, insulation, and wall coverings.
- c. Provide the Contracting Officer with documentation (e.g., Purchase Orders or Material Contracts) to justify payment for materials in advance of installation. When appropriate, include the Defense Priorities and Allocations System (DFAS) ratings (e.g., DX or DO) on purchase orders or material contracts to ensure timely delivery.
- d. Materials to be considered for progress payment prior to installation must be specifically and separately identified in the Contractor's estimates of work submitted for the Contracting Officer's approval in accordance with Earned Value Report requirement of this Contract. Requests for progress payment consideration for such items must be supported by documents establishing their value (e.g., paid invoices) and that the title requirements of the clause at FAR 52.232-5 Payments Under Fixed-Price Construction Contracts have been met.
- e. Ensure materials are adequately insured and protected from theft and exposure. Provide insurance documentation (e.g., Builder's Risk Insurance) which covers the overall value of the materials to be paid in advance of installation.
- f. Provide a written consent from the surety company with each payment request for offsite materials.

- g. Materials to be considered for progress payments prior to installation must be stored within fifty (50) miles of the Portsmouth Naval Shipyard in Kittery, Maine. Other locations are subject to written approval by the Contracting Officer.
- h. Provide written consent allowing the Government access to the remote storage location for inspection of the stored materials.
- i. Materials shall be separated from other stored materials and be clearly identified with the contract number for which the materials will be used.

Materials in transit to the job site or storage site are not acceptable for payment.

SECTION 01 30 00.00 22

ADMINISTRATIVE REQUIREMENTS (PWD ME)

11/20, CHG 4: 08/24

PART 1 GENERAL

This Section applies to Design-Bid-Build and Design-Build projects at Portsmouth Naval Shipyard and PWD ME AOR Facilities.

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EM 385-1-1 (2024) Safety -- Safety and Occupational Health (SOH) Requirements

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES.

SD-01 Preconstruction Submittals

Facility Turnover Planning Meeting Agenda and Red Zone (RZ) Checklist-POAM; G

NAVFAC PWD ME Internal Service Requirements List; G

1.3 MINIMUM INSURANCE REQUIREMENTS

Provide the minimum insurance coverage required by FAR 28.307-2 LIABILITY, during the entire period of performance under this Contract. Provide other insurance coverage as required by State law.

1.4 SUPERVISION

Provide, at a minimum, personnel to meet the requirements of the following supervisory roles for the project, as outlined throughout the Division 01 Specifications:

Project Superintendent  
Project Manager  
Designated Project Scheduler  
Site Safety and Health Officer (SSHO)  
Archaeological Coordinator  
Quality Control (QC) Manager  
Quality Control (QC) Specialists  
Special Inspector (SI)  
Special Inspector of Record (SIOR)  
Environmental Manager

The requirements of each role are enumerated in the following paragraphs. Where the requirements for a role are enumerated in another section, a reference to that section is provided.

#### 1.4.1 Project Superintendent

##### 1.4.1.1 Minimum Communication Requirements

Have at least one qualified superintendent, or competent alternate, capable of reading, writing, and conversing fluently in the English language, on the job-site at all times during the performance of Contract work.

##### 1.4.1.2 Qualifications

Provide Project Superintendent with a minimum of 10 years experience in construction with at least 5 of those years as a superintendent on projects similar in size and complexity. The individual must be familiar with the requirements of EM 385-1-1 and have experience in the areas of hazard identification and safety compliance. The individual must be capable of interpreting a critical path schedule and construction drawings. The qualification requirements for the alternate superintendent are the same as for the Project Superintendent. The Contracting Officer may request proof of the superintendent's qualifications at any point in the project if the performance of the superintendent is in question.

The Project Superintendent cannot be the Project Manager, nor the Quality Control Manager, nor the Site Safety and Health Officer (SSHO).

The Project Superintendent must be a direct employee of the Prime Contractor, not an employee of a subcontractor.

##### 1.4.1.3 Duties

The Project Superintendent is primarily responsible for managing Subcontractors and coordinating day-to-day production and schedule adherence on the project. The superintendent is required, at a minimum, to attend the Specification Mutual Understanding Meeting, Preconstruction Meeting, Environmental Brief, Outage Coordination Meetings, Outage Safety Review Meetings, Archaeological Coordination Meeting, MEP Coordination Meetings, Red Zone Meetings, partnering meetings, preparatory meetings and Quality Control meetings.

##### 1.4.1.4 Non-Compliance Actions

The Project Superintendent is subject to removal by the Contracting Officer for non-compliance with requirements specified in the Contract and for failure to manage the project to insure timely completion. Furthermore, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to such stop orders is acceptable as the subject of claim for extension of time for excess costs or damages by the Contractor.

#### 1.4.2 Project Manager

##### 1.4.2.1 Requirements

The Contractor shall assign a qualified Project Manager to the project.

The Project Manager **cannot** be the Project Superintendent, nor the Quality Control Manager, nor the Site Safety and Health Officer (SSHO).

#### 1.4.2.2 Qualifications

Approval of the Project Manager by the Contracting Officer is required prior to start of construction. Provide resume(s) for the proposed Project Manager(s) to the Contracting Officer for approval. The resume(s) shall describe the candidates' experience with references and qualifications. Any substitutions during the construction period shall be approved by the Contracting Officer. The Contracting Officer reserves the right to interview the proposed Project Manager at any time in order to verify the submitted qualifications. Any replacement personnel shall have the same or better qualifications than the previous individual (PM/QCM/SSHO, etc.). The resumes for the personnel must provide a summary of projects of similar size and responsibility. The Project Manager shall complete the course entitled "Construction Quality Management for Contractors" prior to the start of construction.

The Project Manager must be a direct employee of the Prime Contractor, not an employee of a subcontractor.

#### 1.4.2.3 Non-Compliance Actions

The Project Manager is subject to removal by the Contracting Officer for non-compliance with requirements specified in the Contract and for failure to manage the project to insure timely completion. Furthermore, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to such stop orders is acceptable as the subject of claim for extension of time for excess costs or damages by the Contractor.

#### 1.4.3 Designated Project Scheduler

Provide a Designated Project Scheduler in accordance with the requirements of Section 01 32 17.00 20 COST-LOADED NETWORK ANALYSIS SCHEDULES (NAS).

#### 1.4.4 Site Safety and Health Officer (SSHO)

A Site Safety and Health Officer (SSHO) is a Contractor employee that is responsible for overseeing and ensuring implementation of the Prime Contractor's Safety and Occupational Health (SOH) program according to the Contract, EM 385-1-1, and applicable federal, state, and local requirements.

Provide Site Safety and Health Officers (SSHOs) in accordance with the requirements of Section 01 35 26.00 22 GOVERNMENTAL SAFETY REQUIREMENTS (PWD ME).

#### 1.4.5 Archaeological Coordinator

Provide an Archaeological Coordinator in accordance with the requirements of Section 01 44 00.00 22 ARCHAEOLOGICAL MONITORING (PWD ME).

#### 1.4.6 Quality Control (QC) Manager

The Quality Control (QC) Manager is responsible for managing and implementing the QC program on this Contract. Provide a QC Manager in accordance with the requirements of Section 01 45 00.00 22 QUALITY CONTROL

(PWD ME).

#### 1.4.7 Quality Control (QC) Specialists

Provide a separate Quality Control (QC) Specialist for each of the areas as listed in Paragraph QUALITY CONTROL (QC) SPECIALISTS in Section 01 45 00.00 22 QUALITY CONTROL (PWD ME). The QC Specialists must assist and report to the QC Manager and must have no duties other than their assigned quality control duties. The QC Specialists must be provided in accordance with the requirements of Section 01 45 00.00 22 QUALITY CONTROL (PWD ME).

#### 1.4.8 Special Inspector (SI)

Provide a Special Inspector (SI) in accordance with the requirements of Section 01 45 35 SPECIAL INSPECTIONS.

#### 1.4.9 Special Inspector of Record (SIOR)

Provide a Special Inspector of Record (SIOR) in accordance with the requirements of Section 01 45 35 SPECIAL INSPECTIONS.

#### 1.4.10 Environmental Manager

Provide an Environmental Manager in accordance with the requirements of Section 01 57 19.00 22 TEMPORARY ENVIRONMENTAL CONTROLS - PORTSMOUTH NAVAL SHIPYARD (PWD ME).

### 1.5 SPECIFICATION MUTUAL UNDERSTANDING MEETING

Before the Preconstruction Meeting, and within 21 calendar days from receiving the Notice to Proceed, meet with the Contracting Officer and develop a mutual understanding of the Division 01 specifications and their requirements. This meeting must include the Prime Contractor, the Prime and Subcontractors performing the work, the Contracting Officer, NAVFAC DM/ET, Designer of Record and the NAVFAC PWD ME UEM representative.

At the conclusion of the meeting, the Project Superintendent must certify that the Prime Contractor and its Subcontractors have read, understand, and agree to the requirements of the Division 01 specifications by signing a document which will be prepared by the Contracting Officer.

### 1.6 PRECONSTRUCTION MEETING

**The Preconstruction meeting must take place within 45 calendar days from receiving the Notice to Proceed, and prior to commencement of any work at the site.** Coordinate with the Contracting Officer a time and place to meet for the Preconstruction Meeting. The purpose of this meeting is to discuss and develop a mutual understanding of the administrative requirements of the Contract including but not limited to: daily reporting, invoicing, value engineering, safety, Base-access, outage requests, hot work permits, schedule requirements, quality control, earned value report, shop drawings, submittals, cybersecurity, prosecution of the work, Government acceptance, final inspections, and Contract close-out. Contractor must present and discuss their basic approach to scheduling the construction work and any required phasing.

Prepare and distribute minutes to the attendees within three (3) working days of the preconstruction meeting.

### 1.6.1 Attendees

Contractor attendees must include the Project Manager, Project Superintendent, Site Safety and Health Officer (SSHO), Archaeological Coordinator, Quality Control (QC) Manager, Environmental Manager, and major Subcontractors.

### 1.6.2 Submittals

This section compiles in one location the SD-01 Preconstruction Submittals from the Division 01 specifications that the Contractor is required to submit. The requirements of each submittal are detailed in the specification sections as listed below. This list is not meant to be comprehensive; the Contractor is responsible for confirming the complete list of SD-01 Preconstruction Submittals, including those in Divisions 02 through 46, by reviewing the specifications, including the Submittal Register attached to Section 01 33 00 SUBMITTAL PROCEDURES.

The following SD-01 Preconstruction Submittals must be submitted to the Contracting Officer thirty (30) calendar days prior to the preconstruction meeting:

| Specification  | SD # | SD Description             | Submittal Description                       | Specification Paragraph # |
|----------------|------|----------------------------|---------------------------------------------|---------------------------|
| 01 35 26.00 22 | 01   | Preconstruction Submittals | Accident Prevention Plan; G                 | 1.9                       |
| 01 35 26.00 22 | 01   | Preconstruction Submittals | Indoor Air Quality (IAQ) Management Plan; G | 1.16                      |

The following SD-01 Preconstruction Submittals must be submitted to the Contracting Officer fifteen (15) calendar days prior to the preconstruction meeting:

| Specification  | SD # | SD Description             | Submittal Description             | Specification Paragraph # |
|----------------|------|----------------------------|-----------------------------------|---------------------------|
| 01 14 00.00 22 | 01   | Preconstruction Submittals | List of Contact Personnel; G      | 1.4.1.1                   |
| 01 20 00.00 22 | 01   | Preconstruction Submittals | Earned Value Report; G            | 1.3                       |
| 01 31 23.13 20 | 01   | Preconstruction Submittals | List of Contractor's Personnel; G | 1.4.2                     |
| 01 32 17.00 20 | 01   | Preconstruction Submittals | Baseline NAS; G                   | 1.2.2                     |
| 01 32 17.00 20 | 01   | Preconstruction Submittals | Designated Project Scheduler; G   | 1.9                       |

| Specification  | SD # | SD Description             | Submittal Description                    | Specification Paragraph # |
|----------------|------|----------------------------|------------------------------------------|---------------------------|
| 01 45 00.00 22 | 01   | Preconstruction Submittals | Contractor Quality Control (CQC) Plan; G | 1.5.2                     |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Preconstruction Survey Report; G         | 1.5.1                     |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Environmental Management Plan; G         | 3.1                       |
| 01 74 19       | 01   | Preconstruction Submittals | Construction Waste Management Plan; G    | 1.7                       |

The following SD-01 Preconstruction Submittals must be submitted to the Contracting Officer at or before the preconstruction meeting:

| Specification  | SD # | SD Description             | Submittal Description                                                         | Specification Paragraph # |
|----------------|------|----------------------------|-------------------------------------------------------------------------------|---------------------------|
| 01 30 00.00 22 | 01   | Preconstruction Submittals | Facility Turnover Planning Meeting Agenda and Red Zone (RZ) Checklist-POAM; G | 1.14.1                    |
| 01 30 00.00 22 | 01   | Preconstruction Submittals | NAVFAC PWD ME Internal Service Requirements List; G                           | 1.14.3                    |
| 01 32 17.00 20 | 01   | Preconstruction Submittals | Weekly Look Ahead Schedule; G                                                 | 1.3                       |
| 01 33 00       | 01   | Preconstruction Submittals | Submittal Register; G                                                         | 1.8                       |

The following SD-01 Preconstruction and SD-10 Closeout submittals must be submitted to the Contracting Officer prior to the start of construction:

| Specification  | SD # | SD Description             | Submittal Description             | Specification Paragraph # |
|----------------|------|----------------------------|-----------------------------------|---------------------------|
| 01 11 00.00 22 | 01   | Preconstruction Submittals | Salvage Plan; G                   | 1.6                       |
| 01 14 00.00 22 | 01   | Preconstruction Submittals | Flooding Mitigation Strategy Plan | 1.15                      |
| 01 44 00.00 22 | 01   | Preconstruction Submittals | Archaeological Monitoring Plan; G | 1.6                       |

| Specification  | SD # | SD Description             | Submittal Description                                               | Specification Paragraph # |
|----------------|------|----------------------------|---------------------------------------------------------------------|---------------------------|
| 01 44 00.00 22 | 01   | Preconstruction Submittals | Archaeologist Qualifications; G                                     | 1.4                       |
| 01 44 00.00 22 | 01   | Preconstruction Submittals | Archaeological Coordinator Designation Letter; G                    | 1.5                       |
| 01 45 35       | 01   | Preconstruction Submittals | SIOR Letter of Acceptance; G                                        | 3.1.1                     |
| 01 45 35       | 01   | Preconstruction Submittals | Project Manual; G                                                   | 3.1.1                     |
| 01 45 35       | 01   | Preconstruction Submittals | Written NDT Practices; G                                            | 3.1.3                     |
| 01 50 00.00 22 | 01   | Preconstruction Submittals | Construction Site Plan; G                                           | 1.4                       |
| 01 50 00.00 22 | 01   | Preconstruction Submittals | Contractor Computer Cybersecurity Compliance Statements; G          | 1.6.1.4                   |
| 01 50 00.00 22 | 01   | Preconstruction Submittals | Contractor Temporary Network Cybersecurity Compliance Statements; G | 1.6.6                     |
| 01 50 00.00 22 | 01   | Preconstruction Submittals | Employee Parking Plan; G                                            | 1.7                       |
| 01 50 00.00 22 | 01   | Preconstruction Submittals | Traffic Control Plan; G                                             | 3.4.1                     |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Solid Waste Management Plan; G                                      | 3.4                       |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Regulatory Notifications; G                                         | 1.5.2                     |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Dirt and Dust Control Plan; G                                       | 3.14.1                    |
| 01 57 19.00 22 | 10   | Closeout Submittals        | Contractor Hazardous Material Inventory Log; G                      | 3.6                       |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Storm Water Management/Erosion and Sedimentation Control Plan; G    | 3.1.2.a                   |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Spill Prevention Control and Countermeasure (SPCC) Plan; G          | 3.1.g(2)                  |

| Specification  | SD # | SD Description             | Submittal Description                   | Specification Paragraph # |
|----------------|------|----------------------------|-----------------------------------------|---------------------------|
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Environmental Manager Qualifications; G | 1.5.4                     |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Noise Mitigation Plan; G                | 3.16                      |
| 01 57 19.00 22 | 01   | Preconstruction Submittals | Employee Training Records; G            | 1.5.5                     |

Following submission and approval of all SD-01 Preconstruction Submittals, the Contractor shall confirm, in writing, the construction start date with the Contracting Officer at least five (5) working days prior to start date.

#### 1.7 OUTAGE COORDINATION MEETINGS

Outage Coordination Meetings are to be held as necessary, prior to submittal of an outage request package. The meetings are to be scheduled and held by the Contractor, and are intended to develop a mutual understanding of the administrative and technical scope and requirements needed to support development, and ultimate approval, of the outage request packages. Successful execution of the outages within this contract, including receiving outage approval, require the Contractor to adequately inform the Government of the outage, including its scope, impact, and timeline. The Contractor must adequately address any Government concerns in the outage request package. Failure of the Contractor to properly coordinate and plan for an outage, which may result in rejection of an outage request package, are entirely the responsibility of the Contractor and can not be made the subject, or any component of any request for additional time or compensation.

The meeting shall also review any Critical Shipyard Infrastructure that may be impacted by the work and review Paragraph CRITICAL SHIPYARD INFRASTRUCTURE REQUIREMENTS in Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME).

These meetings must include applicable personnel from the Prime Contractor, the Prime and Subcontractors performing the work, the Contracting Officer, the NAVFAC DM/ET, the NAVFAC PWD ME UEM Representatives, and applicable stakeholders. Additional personnel may be included (i.e., the Designer of Record) if requested by the Contracting Officer.

All parties, led by the Contractor, must fully coordinate and be aligned on the activities and dates required to support the outages.

#### 1.8 OUTAGE SAFETY REVIEW MEETINGS

The Outage Safety Review Meetings are to be held prior to any outages that require hazardous energy control (HEC). During these meetings, all parties must discuss and coordinate on the scope of work, HEC procedures (specifically, the lock-out/tag-out procedures for worker and utility protection), the Activity Hazard Analysis (AHA), assurance of trade personnel qualifications, identification of competent persons, and compliance with HEC training in accordance with EM 385-1-1. Clarify when

personal protective equipment is required during switching operations, inspection, and verification.

For utility distribution equipment that is to be operated by Government or Utility personnel, the Prime Contractor and the Subcontractor performing the work must attend the Safety Preparatory Inspection Coordination Meeting, which will also be attended by the Contracting Officer, and is required by EM 385-1-1. The Safety Preparatory Inspection Coordination Meeting will occur immediately preceding the start of work and following the completion of the Outage Coordination Meeting. Both the Safety Preparatory Inspection Coordination Meeting and the Outage Coordination Meeting must occur prior to conducting the outage and commencing with lockout/tagout procedures.

#### 1.9 ENVIRONMENTAL BRIEF

Attend an Environmental Brief prior to commencing any work on the Portsmouth Naval Shipyard. The Brief will be conducted by the Contracting Officer with PWD-ME EV staff and Shipyard C106 Environmental Representatives. The Brief will be part of the Preconstruction Meeting agenda or held as a separate meeting depending on the size and scope of work and potential environmental impact, as determined by the Government.

The meeting will cover details for all the submittals that are required in Section 01 57 19.00 22 TEMPORARY ENVIRONMENTAL CONTROLS - PORTSMOUTH NAVAL SHIPYARD (PWD ME) including review of the submittal requirements for the Environmental Management Plan; important notes regarding Installation Restoration (IR) sites, Historic and Cultural Resources, Wetlands, Waste Generation, Concrete Wash Water/Wastewater, and Hazard Materials Management, including sampling, testing and disposal requirements; and other applicable topics.

At the Brief, the Contractor shall provide the following information: types, quantities, and use of hazardous materials that will be brought onto the Portsmouth Naval Shipyard; types and quantities of wastes/wastewater that may be generated during the Contract; types and quantities of oil that will be brought onto the Shipyard; pollution control measures for spill prevention and control; and any bulk oil storage container information including quantity and type of product stored. Discuss the results of the Preconstruction Survey at this time.

The Brief will develop a mutual understanding relative to the details of environmental protection, including measures for protecting natural resources, historic properties, required reports, required permits, specific permit requirements, and other measures to be taken. Identify additional environmental concerns specific to the site (e.g., historic, archaeological and natural resources, IR, erosion and sediment control, spill prevention and control, soil management, testing and disposal requirements, etc.).

Contractor attendees must include the Project Manager, Project Superintendent, Site Safety and Health Officer (SSHO), Archaeological Coordinator, Quality Control (QC) Manager, Environmental Manager, and major Subcontractors.

#### 1.10 ARCHAEOLOGICAL COORDINATION MEETING

Prior to the start of any ground disturbing/excavation work and prior to submission of the Archaeological Monitoring Plan, the Archaeological

Coordinator, project archaeologist, Quality Control (QC) Manager, NAVFAC DM/ET and PWD-ME EV staff must meet to review the proposed approach to the work, establish a protocol for artifact collection, and review the relevant documentation.

For projects with a duration exceeding one year, re-initial archaeological coordination meetings must be held on an annual basis to ensure continued alignment on archaeological protocols. In addition, a re-initial archaeological coordination meeting must be held should there be a change in key personnel (Archaeological Subcontractor, Archaeological Coordinator, QC Manager, Project Superintendent, Project Manager, etc.)

#### 1.11 MEP COORDINATION MEETINGS

The Contractor shall schedule monthly in-person coordination meetings with the mechanical, electrical, piping, and fire protection trades. The intent of the meetings is to review construction progress and coordinate work being performed.

Meeting minutes must be provided within 24 hours of completion of each MEP coordination meeting.

The QC organization will be responsible for leading the MEP Coordination Meetings with other trades encouraged to participate.

#### 1.12 FACILITY TURNOVER PLANNING MEETINGS (Red Zone Meetings)

Meet with the Government to identify strategies to ensure the project is carried to expeditious closure and turnover to the Client. Start the turnover process at the Preconstruction Meeting with a discussion of the Red Zone (RZ) process and convene at regularly scheduled RZ Meetings beginning at approximately 75 percent of construction completion. Refer to Paragraph MEETINGS for additional information on frequency of RZ Meetings. Include the following in the facility Turnover effort:

##### 1.12.1 Red Zone Checklist

The Contracting Officer will provide the Contractor a copy of the Red Zone Checklist template in advance of the Red Zone Facility Turnover Meeting. See Appendix A for an example of the Facility Turnover Planning Meeting Agenda and Red Zone (RZ) Checklist-POAM.

At the initial Red Zone Facility Turnover Meeting, NAVFAC, the Client and Contractor will modify the Red Zone Checklist template by adding or deleting critical activities applicable to the project and assign planned completion dates for each activity. This becomes the Red Zone POAM which will be utilized through to the contract completion.

Items listed on the checklists are required to remain on the checklists if they are part of the project/Contract or required by construction convention. Items not listed on the checklists, but required in the Contract or by construction convention, must be added to the checklists by the Contractor, Client and NAVFAC. The Contracting Officer may request additional activities be added to the Red Zone Checklist at any time as necessary. Checklists are applicable to all Contracts no matter what Category of Work. The Point of Contact and due date must initially be determined during the Facility Turnover Planning Meeting by the NAVFAC, Client and Contractor leads. During execution of the NRZ process, for each item on the entire list, the Construction Manager (CM) must indicate

date completed and initial to indicate completion of the item. If a party fails to complete an item by the due date, this must be noted on the checklist and a new due date established and indicated.

#### 1.12.2 Meetings

- a. Upon Government acceptance of the RZ Checklist-POAM, the Contracting Officer will send out the accepted RZ Checklist-POAM to all attendees. The Project Superintendent is required to lead regular Red Zone Meetings beginning at approximately 75 percent project completion, or three (3) to six (6) months prior to Beneficial Occupancy Date (BOD), whichever comes first.
- b. The Contracting Officer will establish the frequency of the meetings, which is expected to increase as the project completion draws nearer. At the beginning, Red Zone meetings may be every two weeks then increase to weekly towards the final month of the project.
- c. Using RZ Checklist-POAM as a Plan of Action and Milestones (POAM) and basis for discussion, review upcoming critical activities and strategies to ensure work is completed on time.
- d. During the Red Zone Meetings, discuss with the NAVFAC DM/ET any upcoming activities that require Government involvement.
- e. All parties will maintain their copy of the RZ Checklist-POAM documenting the actual completion dates as work is completed and update the RZ Checklist-POAM with revised planned completion dates as necessary to match progress. The CM will maintain the master RZ Checklist-POAM, periodically distributing a scanned copy of the current RZ Checklist-POAM to attendees via email after significant progress is made.

#### 1.12.3 NAVFAC PWD ME Internal Service Requirements List

An initial, pre-edited draft of the NAVFAC PWD ME Internal Service Requirements List will be provided by the Contracting Officer upon request.

Include all information usually listed on manufacturer's name plate. The Internal Service Requirements List must include, as applicable, the following for each piece of equipment installed: description of item, location (by room number), manufacturer, model number, serial number, capacity, floor coverings, wall and ceiling surfaces; types and square footage of coverage, lighting fixtures, bathroom fixtures, windows, and HVAC filters.

Submit a preliminary Internal Service List to the Contracting Officer at the initial Facility Turnover Meeting. Provide the final completed Internal Service List with all required facility system/equipment information to the Contracting Officer at least ninety (90) calendar days prior to the project BOD.

#### 1.13 PARTNERING

To most effectively accomplish this Contract, the Contractor and Government must form a cohesive partnership with the common goal of drawing on the strength of each organization in an effort to achieve a successful project without safety mishaps, conforming to the Contract, within budget, and on schedule. The partnering team must consist of

personnel from both the Government and Contractor including project level and corporate level leadership positions. Key Personnel from the supported command, end user (who will occupy the facility), NAVFAC, PWD Maine Design and Construction team and Subject Matter Experts (SME's), FEAD, Project Manager (PM), Design Manager (DM), Construction Manager (CM), Engineering Technician (ET), Contractor, key Subcontractors, and the Designer of Record are required to participate in the Partnering process.

#### 1.13.1 Facilitated (Formal) Partnering

- a. Within 35 calendar days after award and prior to the start of work, host a Formal Partnering session with key personnel from the project team including both Contractor and Government personnel. All costs associated with the Partnering session including the third-party independent Facilitator Consultant, meeting room and other incidental items are the responsibility of the Contractor.
- b. Before the Facilitated (Formal) Partnering session, coordinate with the Facilitator all requirements for incidental items (such as audio-visual equipment, easels, flipchart paper, colored markers, note pads, pens/pencils, colored flash cards) and have these items available at the Partnering session. Provide copies of any documents required for distribution to all attendees. Participants will bear their own costs for meals, lodging and transportation associated with Partnering.
- c. The Initial Partnering Session must be a duration of one day and be held at a location off base as agreed to by the Contracting Officer. Partnering session may take place concurrently with the Preconstruction Meeting.
- d. Facilitator must be experienced in conducting corporate Partnering sessions and must be a third-party independent facilitating consultant - not an employee of the Contractor. The Facilitator is responsible for leading all aspects of the Partnering session necessary to achieve the Partnering goal.
- e. An outcome of the Partnering session must be an escalation matrix agreed upon by both the Government and Contractor, which identifies key Government and Contractor decision makers by name and anticipated decision durations.
- f. Host follow-on Partnering Sessions at three- to six-month intervals or more frequently if needed and lasting generally a half day or less. Attendees need only be those required to resolve current issues. The same Facilitator used in the Initial Partnering session must lead the follow-on sessions unless an alternative is permitted by the Contractor Officer. All costs associated with follow-on Partnering sessions are the responsibility of the Contractor.

#### 1.14 ELECTRONIC MAIL (E-MAIL) ADDRESS

Establish and maintain electronic mail (e-mail) capability along with the capability to open various electronic attachments as text files, pdf files, and other similar formats. Within 10 days after Contract award, provide the Contracting Officer a single (only one) e-mail address for electronic communications from the Contracting Officer related to this Contract including, but not limited to, Contract documents, invoice information, request for proposals, and other correspondence. The

Contracting Officer may also use email to notify the Contractor of Base access conditions when emergency conditions warrant, such as hurricanes or terrorist threats. Multiple email addresses are not allowed.

It is the Contractor's responsibility to make timely distribution of all Contracting Officer initiated e-mail with its own organization including field office(s). Promptly notify the Contracting Officer, in writing, of any changes to this email address.

**01 30 00 APPENDIX A****NAVFAC Red Zone  
Facility Turnover Planning Meeting****AGENDA****I. Introduction and Overview – Purpose**

CM

The purpose of the Facility Turnover Planning Meeting is to address elements within the project team's purview – schedule management, assure completed facility complies with contract requirements, and other contractual issues. Each member of the project delivery team (Client, NAVFAC, and the contractor) has critical responsibilities to ensure timely completion and turnover of the new facility and each member should execute the NRZ process to achieve this end. The NRZ process provides a final re-focusing of attention to details of those key elements critical for a successful construction contract completion. In implementing NRZ processes, the NAVFAC/Contractor/Client team take a collective "snapshot" of contract status, identifying remaining actions to be accomplished, and confirm required resources needed for successful contract completion and turnover to the Client.

The Facility Turnover Planning Meeting is a collaborative effort between the Client, NAVFAC, and the contractor and results in a completed "NRZ Checklist/POAM Items" list that identifies the major items (and their due dates) that must be completed by the Contractor, the Client and the NAVFAC team to ensure timely completion of the contract.

**II. Attendees**

NAVFAC Echelon IV (PM); NAVFAC FEAD/ROICC Team (AROICC, CM, ET/QA, Contracting Officer); Client Team (Project Manager, Program Coordinator, User/Tenant); Contractor Team (Project Manager, Project Superintendent, CQC Manager)

**III. Schedule to Completion (POAM)**

Contractor

**IV. Schedule of Final Outfitting and Occupancy (POAM)**

Client

**V. Critical feature(s) of project (POAM)**

CM

**VI. Transfer of Maintenance Responsibility**

CM

**VII. Systems training & O&M Manuals (POAM)**

CQC Manager

**VIII. Other Items to include on NRZ checklists**

All

**IX. Summary of Required Actions and Responsibility**

CM

***Guidelines for conducting Facility Turnover Planning Meeting are as follows:***

- a. Meeting is held at approximately 75% construction contract completion or three to six months prior to BOD. NAVFAC representatives will include the Project Manager, Construction Manager/AROICC (CM) and Design Manager (DM), as appropriate. The contractor representatives include applicable prime contractor staff and decision-makers from major subcontractors. Design-Build contractors will have A-E representatives attending. The Client should include representatives from Public Works Officer (PWO) staff, a Client scope and financial decision maker, a user tenant representative, a facility start-up person, and others such as SPAWAR, NMCI, telephone, and furniture contractor, etc.
- b. The purpose of the meeting is to plan the remaining work, identify critical project features that still need to be completed (such as “soft” construction contract requirements as shown on the NRZ Checklist/POAM Items), and to complete the filling out of the “NRZ Checklist/POAM Items”.
- c. The contractor, client and NAVFAC provide a POC and due date for each item on their checklist. The team fills in the checklists by selecting items applicable to the project, selects due dates on each item, and appoints a person who has responsibility to ensure the item gets completed by the due date. The CM will be responsible to monitor the milestones.

### **NRZ Checklist/POAM Items**

The table below provides typical NRZ checklist items for contractor, Client, and NAVFAC actions. Items listed on the checklists are required to remain on the checklists if they are part of the project/contract or required by construction convention. Items not listed on the checklists, but required in the contract or by construction convention, must be added to the checklists by the contractor, Client and NAVFAC. Checklists are applicable to all contracts no matter what Category of Work.

The Point of Contact and due date shall initially be determined during the Facility Turnover Planning Meeting by the NAVFAC, client and contractor leads. During execution of the NRZ process, for each item on the entire list, the Construction Manager (CM) shall indicate date completed and initial to indicate completion of the item. If a party fails to complete an item by the due date, this should be noted on the checklist and new due date established and indicated. The completed NRZ Checklist/POAM shall be placed in the contract file.

|    | A                  | B | C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | D                                                           | E                       | F               | G                           | H                  | I                                                                                                                                        |

SECTION 01 31 23.13 20

ELECTRONIC CONSTRUCTION AND FACILITY SUPPORT CONTRACT MANAGEMENT SYSTEM  
(eCMS)

08/23, CHG 1: 02/24

PART 1 GENERAL

1.1 CONTRACT ADMINISTRATION

Utilize the Naval Facilities Engineering Command's (NAVFAC's) Electronic Construction and Facility Support Contract Management System (eCMS) for the transfer, sharing, and management of electronic technical submittals and documents. The web-based eCMS is the designated means of transferring technical documents between the Contractor and the Government. Paper media or e-mail submission, including originals or copies, of the documents is not permitted unless identified within the contract.

All Government Contracting Specialist/Officer, legal, and command communications will remain the same.

1.2 USER PRIVILEGES

The Contractor's key staff may be provided access to eCMS. Contact the Contracting Officer for eCMS account access. Project roles and system roles will be established to control each user's menu, application, and software privileges, including the ability to create, edit, or delete objects. Additional project roles may be assigned for workflow. The Contracting Officer makes the final decision on roles for the project. User's ability to view and edit documents may be lowered at the discretion of the Contracting Officer.

Only one eCMS user account is required regardless of the user's number of projects. Notify the Contracting Officer within seven calendar days if a Contractor user is no longer associated with the company or project so they can remove them from any open record and inactivate them from the project.

1.2.1 eCMS Subcontractor Users

If the Contractor's user is a Subcontractor, the Subcontractor must be registered under the name of their company and email.

1.2.2 Users with Multiple Roles

Users may have multiple roles associated with their account within eCMS. Roles are used in workflow. When a user is added to the project, they will be assigned the default role from when the user was created. Contact the Contracting Officer to change or add roles to the user for the project.

1.2.3 Loss of Privilege

Users may lose privilege to access eCMS at the discretion of the Contracting Officer. The eCMS is a collaborative system that allows flexibility of use and does not restrict all inappropriate user actions. User activities are logged into eCMS in visible and background data collection. Users found to use eCMS in an inappropriate manner may have their eCMS access revoked. Examples include, but are not limited to,

fraudulent representations, sharing user accounts with others, and changing approved records without the consent of the Contracting Officer. Depending on the severity of the infraction, the users can lose eCMS access for a period of time, permanently for the project, or lose eCMS access for any project. The Contractor may appeal the suspension in writing to the Contracting Officer within 14 calendar days of notice of suspension. The appeal must identify the infraction, supporting information, and steps to ensure the infraction will not happen in the future.

### 1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

#### SD-01 Preconstruction Submittals

##### List of Contractor's Personnel; G

### 1.4 SYSTEM REQUIREMENTS AND CONNECTIVITY

#### 1.4.1 General

NAVFAC eCMS requires a web-browser (platform-neutral) and Internet connection. For best results, recommend using browser in InPrivate/Incognito mode; Internet speeds greater than 40mbps when uploading files, computers with high RAM and Solid State Drives, "White List" eCMS website, Zip or Split files for better uploading. Non-NAVFAC Users are not to use VPN when using eCMS per NAVFAC IT.

The use of eCMS is required by the Contractor and all associated costs and time necessary to utilize eCMS will be borne by the Contractor with no allowance for time extensions and at no additional cost to the government.

Note any computers (including tablet, laptop or other computers) shall not be introduced into nor removed from the Portsmouth Naval Shipyard. In the event such equipment is required for performance of Contract work, approvals must be obtained from the Portsmouth Naval Shipyard Security Officer via the Contracting Officer. Refer to Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME) paragraph SECURITY REQUIREMENTS for additional requirements.

#### 1.4.2 Contractor Personnel List

At least fifteen (15) calendar days prior to the preconstruction meeting,, provide to the Contracting Officer a list of Contractor's personnel who will have the responsibility for the transfer, sharing and management of electronic submittals, RFIs, daily reports, and other files and will require access to the eCMS. Project personnel roles which must be filled as applicable in the eCMS include, at a minimum, the Contractor's Project Manager (KTR-PM), Superintendent (KTSUPT), Quality Control (QC) Manager (KTR-QC), Principal (KTR-PRIN), and Site Safety and Health Officer (KTR-SSHO). Notify the Contracting Officer immediately of any personnel changes to the project. The Contracting Officer reserves the right to perform a security check on all potential users.

Provide the following information:

Company Name

Name (First, Last)

E-mail Address

Project Role (CQM, SSHO, Superintendent, CM, PM, Principal)

Existing or New eCMS User

## 1.5 SECURITY CLASSIFICATION

In accordance with Department of Navy guidance, all military construction contract data are unclassified, unless specified otherwise by a properly designated Original Classification Authority (OCA) and in accordance with an established Security Classification Guide (SCG). Refer to the project's OCA when questions arise about the proper classification of information.

In conformance with the Freedom of Information Act (FOIA), DoD INSTRUCTION 5200.48 CONTROLLED UNCLASSIFIED INFORMATION (CUI), and DoD requirements, any unclassified project documentation uploaded into the eCMS must be designated either "U - UNCLASSIFIED" (U) or "CUI - CONTROLLED UNCLASSIFIED INFORMATION" (CUI). NAVFAC eCMS must only be used for the transaction of unclassified information associated with construction projects. Controlled Unclassified Identification (CUI) documents may be loaded into eCMS with the appropriate markings.

### 1.5.1 Markings on CUI Documents

Contractor's proprietary information, or documents determined by the originator in accordance with CUI guidance, should be marked CUI. Proprietary information not marked CUI can be released under the Freedom of Information Act (FOIA). Apply the appropriation markings before any document is uploaded into eCMS. Markings are not required on Unclassified U documents.

## 1.6 ECMS UTILIZATION

Establish, maintain, and update data and documentation in the eCMS throughout the duration of the contract. Utilize eCMS to transfer all submittals, RFIs, daily reports, and other files required by contract to be forwarded to the government.

Full eCMS use is required. All Submittals/Information to use eCMS Modules including, but not limited to, RFIs, Daily Reports, Meeting Minutes, Communications, Issues, Punch Lists, Checklists, and Flysheets, unless otherwise directed by the Contracting Officer.

### 1.6.1 Restricted Information

Personally Identifiable Information (PII) transmittal such as credit card, driver's license, passport, social security, and payroll number are not permitted in eCMS. Name, address, and email are permitted. Pre-negotiation information such as cost estimates that require formal negotiations are not allowed. For example, proposed changes over the SAP level of \$250k require formal negotiations. Cost estimates for LEAN, ULTRA LEAN, and Design Changes under the SAP level are at the discretion of the

Contracting Officer. The eCMS must only be used for the transaction of unclassified information associated with construction projects. Controlled Unclassified Identification (CUI) documents may be loaded into eCMS with the appropriate markings. Uploading of files directly into the Documents folder is not allowed. All documents must be uploaded using an eCMS module.

#### 1.6.2 Naming Convention for Files

Titles of files uploaded are to be descriptive of the purpose and content of the file. For example RFI\_ROOF\_Leak.doc or for submittals, SUB\_LIGHT\_FIXTURE.pdf. Titles of file to be uploaded must only contain uppercase letters, lowercase letters, numbers, hyphens (-), underscores (\_) and periods (.). Use of any other characters is not allowed and may create an error. When practicable, adding the record number to the title is desired. For example RFI\_XYZ12345\_ROOF\_Leak.doc. When practicable, add the date (day of work) with format YYYYMMDD in the filename. For example DAILY\_REPORT\_20190504. Uploading files with the same title will create a new revision in eCMS. Original revision is Rev 0, the first revision if Rev 1. Uploaded files are to use the default file location regardless of the module used unless directed by the Contracting Officer.

Table 1 also identifies which eCMS application is to be used in the transmittal of data (these are subject to change based on the latest software configuration).

Table 1 - Project Documentation Types

| SUBJECT/NAME                                       | REMARKS                                                                                                                                                                               | ECMS APPLICATION |

| Warranties/BOD Letter                                                                         |                                                                                                                                                                                       | Submittals                                    |
| Quality Assurance Reports                                                                     |                                                                                                                                                                                       | Checklists (Government initiated)             |
| Non-Compliance Notices                                                                        |                                                                                                                                                                                       | Non-Compliance Notices (Government initiated) |
| Other Government-prepared documents                                                           |                                                                                                                                                                                       | GOV ONLY                                      |
| Letters to government contracting, claims, REAs, and other contracting officer communications | eCMS is not the primary tool to use in contracting officer communications. eCMS can only store documents or letters after the submission to the contracting officer is made.          | Communications                                |

| SUBJECT/NAME        | REMARKS                                                                                      | ECMS APPLICATION |
|---------------------|----------------------------------------------------------------------------------------------|------------------|
| All Other Documents | Refer to FOIA guidelines and contact the FOIA official to determine whether exemptions exist | As applicable    |

#### 1.6.3 RFIs Module

Create Contractor RFIs using eCMS RFIs module. The Contractor must confirm the numbering convention with the Contracting Officer if different than eCMS default.

If the Government (GOV) Response has "No" Cost or Schedule Impact, this reply is given with the expressed understanding that it does not constitute a basis for any change in the amount or time of subject contract. Information provided in this response does not authorize work not currently included in the contract. If GOV Response is "Yes" or "Potentially" then this response may require a change to the contract. If the Contractor disagrees with either the Government's No Cost determination or No Schedule impact determination, or both, the Contractor has 14 calendar days to notify the Contracting Officer in writing.

#### 1.6.4 Submittals Module

Create Contractor submittals using eCMS Submittals module. The Contractor must confirm the numbering convention with the Contracting Officer if different than eCMS default.

#### 1.6.5 Submittal Packages Module

Create submittal packages using the eCMS Submittal Packages module in lieu of or in addition to Related Objects. Submittal Packages track completion of the packaged submittals and is used in NAVFAC HQ's KPIs.

#### 1.6.6 Communications Module

Create communications using the eCMS Communications module. The Communications module is used to create or document communications that are not a part of other eCMS modules. Use of Communications module will memorialize information into an eCMS record file. The following are Types of Communications:

Email

Memo to File

Face to Face

Telephone

Web Collaboration

Photos

Other Documents

Other

Unless directed by the Contracting Officer, upload documents or files that do not have a corresponding eCMS module. Choose "Photos" Type for Photos and "Other Documents" for all other documents.

#### 1.6.7 Issues Module

Create or respond to issues using the eCMS Issues module. Respond to CPARS issues using the Issues module.

#### 1.6.8 Meeting Minutes Module

Create or respond to Meeting Minutes using the eCMS Meetings module.

Document required contractual meetings. Dates of meetings are used in NAVFAC KPIs. Minimum meetings in eCMS include the following:

Preconstruction (Pre Con)

Initial and Preparatory Three Phases of Control

Quality Control (QC)

#### 1.6.9 Potential Change Items Module

Not used.

#### 1.6.10 Daily Report Module

Create Daily Reports using the eCMS Daily Report Module. The Contractor must confirm the numbering convention with the Contracting Officer if different than eCMS default.

#### 1.6.11 Punchlists Testing Logs (Legacy)

Punchlist Testing Logs is a legacy program that is being replaced by the Punch Lists Module. This module is to be used for reference of past projects. Use the Punch Lists Module for all future work.

#### 1.6.12 Punch Lists Module

The eCMS Punch Lists module is useful for more than just Punchlists. The module includes the capability of batch editing, create items from Optical Character Recognition (OCR) plans, assign tasks and track completion of individual items.

Create the following using the Punch Lists module:

Rework Items List

DFOW List

Punch-Out Inspection

Pre-Final Punchlist Inspection

Final Punchlist Inspection

Testing Logs

#### 1.6.13 FWD UltraLean COAR RFP Module

Not used.

#### 1.6.14 Non-Compliance Notices (NCN) Module

Respond to Non-Compliance Notices listed in the Non-Compliance Notices module.

#### 1.6.15 Checklists

Use Checklist listed in the Contractor's eCMS menu and as directed by the Contracting Officer. Checklists capture data and is used in dashboards and KPIs.

##### 1.6.15.1 Partnering Team Health Survey Checklist

Contractor must use the eCMS checklist to document the partnering team health survey. Partnering Team Health Survey is in accordance with the Partnering Specification of this contract.

#### 1.6.16 Flysheets

Use Flysheets listed in the Contractor's eCMS menu, if available, and as directed by the Contracting Officer. Flysheets allow the Contractor to print out information from other systems and upload into eCMS. The eCMS will use OCR to capture the information as data. Flysheets capture data and used in dashboards and KPIs.

#### 1.6.17 eCMS Outage

In the case where eCMS is unavailable for 8 hours or more, paper or email may be used in the interim to maintain project schedule.

Once the system is operational, all final records are required to be recreated using the appropriate module. Subject/title of the record to include the type of record i.e., RFI/Submittal/Daily Report/Communication/Other, the identification number(s), and the statement "Processed Outside of eCMS". Example, "RFI 001 Processed Outside of eCMS".

#### 1.6.18 User Account Activity

NAVFAC eCMS captures user data and activities that are directly related to the user's account. The user agrees through the use of eCMS, their

account activities will be captured and can be displayed on eCMS printed reports.

#### 1.6.19 Quality Assurance

Requested Government response dates on Transmittals and Submittals must be in accordance with the terms and conditions of the Contract unless previously agreed by the Contracting Officer. Requesting response dates earlier than the required review and response time, without concurrence by the Contracting Officer, may be cause for rejection.

Incomplete submittals will be rejected without further review and must be resubmitted. Required Government response dates for resubmittals must reflect the date of resubmittal, not the original submittal date.

All submittals and associated attachments must be transmitted to the Government via the Contracting Officer. Transmittal forms are no longer required when using eCMS since approval status is tracked on the submittal. Transmittal forms can be attached to submittals if required by the Contracting Officer. Submittals requiring Government approval are "Transmitted For" "Approval". Submittals requiring Contractor approved submittals, including those designated for Contractor Quality Control approval or Information Only, are "\*Transmitted For" "Information Only" in the Submittal Module. Provide and sign the QC Certification or approving statement on the attachment per submittal specification section. When Submittal Packages are required, use eCMS Submittal Packages after creating individual submittals. Importing Submittals from the Submittal Register is optional. Contact the Contracting Officer for the data conversion requirements.

-- End of Section --

SECTION 01 32 17.00 20

COST-LOADED NETWORK ANALYSIS SCHEDULES (NAS)

11/23, CHG 1: 08/24

PART 1 GENERAL

1.1 DEFINITIONS

The cost-loaded Network Analysis Schedule (NAS) is a tool to manage the project, both for Contractor and Government activities. The NAS is also used to report progress, evaluate time extensions, and provide the basis for progress payments.

For consistency, when scheduling software terminology is used in this section, the terms in Primavera's scheduling programs are used.

1.2 SCHEDULE REQUIREMENTS PRIOR TO THE START OF WORK

1.2.1 Preliminary Scheduling Meeting

Before preparation of the Project Baseline Schedule, and prior to the start of work, meet with the Contracting Officer to discuss the proposed schedule and the requirements of this section. The Contractor shall propose projected data dates for Monthly Network Analysis Updates for the project and incorporate each monthly update submittal into the submittal register. Discuss required forms, terminology, and submittal requirements of this section and other requirements related to schedule management for this contract. Use the NAVFAC-provided Preliminary Scheduling Meeting Guideline in the completion of the intended mutual understanding.

1.2.2 Project Baseline Schedule

Submit the Baseline NAS within 30 calendar days from receiving the Notice to Proceed. Data date must be set to contract award date and no progress recorded for any activity. Only bonds and the required Preliminary Scheduling Meeting may be recorded as complete prior to acceptance of the Baseline NAS. The acceptance of the Baseline NAS is a condition precedent to:

- a. The Contractor starting demolition work or construction stage(s) of the contract.
- b. Processing Contractor's invoices(s) for any items other than bonds.
- c. Review of any schedule updates. The Contractor is still required to submit monthly network analysis updates. Without an accepted baseline the Government may return schedule update as received for record.

Submittal of the Baseline NAS is the Contractor's certification that the submitted schedule meets the requirements of the Contract Documents and represents the Contractor's plan on how the work will be accomplished. Provide all items listed in paragraph REQUIRED TABULAR REPORTS AND NATIVE P6 XER FILES with Baseline NAS submittal.

### 1.3 THREE-WEEK LOOK AHEAD SCHEDULE

#### 1.3.1 Weekly CQC Coordination and Production Meeting

Submit the first look ahead schedule within 30 days from receiving the Notice to Proceed and continue to submit weekly until contract completion.

Transmit the Three-Week Look Ahead Schedule to the Contracting Officer via eCMS on the first day of the current week that the look ahead schedule covers and at least two working days prior to Quality Control meetings, or as agreed to by the Contracting Officer. Contractor is required to provide all attendees at meetings that require discussion of the schedule.

#### 1.3.2 Look Ahead Schedule Requirements

Prepare and issue a Three-Week Look Ahead schedule to provide a more detailed day-to-day plan of upcoming work identified on the Project Network Analysis Schedule. Requirements include:

- a. For each Look Ahead schedule activity, identify parent NAS activity number(s). The parent NAS activity is the activity in the NAS that would incorporate the Look Ahead schedule activity requirement and scope of work.
- b. Update schedule each week to show the planned work for the current and following two-week period. Also include previous week, as-built work, showing actual start and finish dates.
- c. Include upcoming outages, closures, preparatory meetings, and initial meetings, testing and inspections.
- d. Clearly identify longest path activities on the Three-Week Look Ahead Schedule. Include a key or legend that distinguishes longest path activities. Include all Longest Path activity NAS start/finish dates exceeded and/or occurring during this period.
- e. Identify responsibility for each activity.
- f. The detail work plans are to be bar chart type schedules, derived from but maintained separately from the Project NAS on an electronic spreadsheet program and printed on 11 by 17 inch sheets as directed by the Contracting Officer.
- g. Activities must not exceed 5 working days in duration and have sufficient level of detail to assign crews, tools and equipment required to complete the work.
- h. Lookahead activities are not limited to only onsite work. Include but do not limit to submittal, offsite fabrication, and procurement activities if needed to ensure longest path is maintained. Include design activities and coordination when part of scope.
- i. Upload Lookahead to eCMS as a submittal by the date and time required, as indicated above.

### 1.4 MONTHLY NETWORK ANALYSIS

Submittal of Monthly NAS is the Contractor's certification that the submitted schedule meets the requirements of the Contract Documents and

represents the Contractor's plan on how the work will be accomplished. Provide all items listed in paragraph REQUIRED TABULAR REPORTS AND NATIVE P6 XER FILES with the monthly NAS submittal.

#### 1.4.1 Monthly Network Analysis Updates

- a. Regardless of whether an invoice is being submitted monthly, or no progress in the schedule occurred, an updated schedule (or with new data date) must be submitted monthly to the Government. The Monthly NAS update must be submitted within 10 calendar days of the data date.
- b. Regardless of whether a baseline or other schedule is submitted and/or accepted, an updated schedule must be submitted monthly to the Government. Monthly updates submitted before the baseline being accepted will be considered as (interim and for information only) submittal.
- c. Provide all items listed in paragraph REQUIRED TABULAR REPORTS AND NATIVE P6 XER FILES, with each monthly NAS update submittal.
- d. Meet with Government representative(s) at monthly intervals to review and agree on the information presented in the updated project schedule. The submission of an accepted, updated schedule to the Government is a condition precedent to the processing of the Contractor's invoice.
- e. The Monthly Network Analysis Updates must include identification of all anticipated outages (road, rail, utility, etc.) that are required to complete the work for the coming two-month period, at a minimum. The schedule must include the dates on which the outages are expected to commence, as well as the dates for when the outage request packages are expected to be submitted. Refer to Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME) for outage requirements.
- f. Activity progress must incorporate as-built events as they occurred and correspond to records including but not limited to submittals and daily production and quality control reports.
- g. Software Settings: Handle schedule calculations and Out-of-Sequence progress (if applicable) through Retained Logic, not Progress Override. Show all activity durations and float values in days. Show activity progress using Remaining Duration. Set default activity type to "Task Dependent".
- h. Update schedule must reflect current Contract Completion Date and contract value in accordance with all conformed contract modifications issued prior to data date of NAS update.

#### 1.4.2 As-Built Schedule

As a condition precedent to the release of retention and making final payment, submit an "As-Built Schedule," as the last schedule update showing all activities at 100 percent completion. This schedule must reflect the exact manner in which the project was actually constructed.

#### 1.5 CORRESPONDENCE AND TEST REPORTS

Reference Schedule activity IDs that are being addressed in each correspondence (e.g., letters, Requests for Information (RFIs), e-mails,

meeting minute items, Production and QC Daily Reports, material delivery tickets, photographs) and test report (e.g., concrete, soil compaction, weld, pressure).

#### 1.6 ADDITIONAL SCHEDULING REQUIREMENTS

Other specification sections may include additional scheduling requirements, including systems to be inspected, tested and commissioned, and submittal procedures. Those schedule requirements must be incorporated into the NAS schedule.

#### 1.7 SUBMITTALS

Government approval/acceptance is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

##### SD-01 Preconstruction Submittals

Baseline NAS; G

Designated Project Scheduler; G

##### SD-07 Certificates

Three-Week Look Ahead Schedule; G

Monthly Network Analysis Updates; G

##### SD-11 Closeout Submittals

As-Built Schedule; G

#### 1.8 SOFTWARE

Prepare and maintain project schedules using Primavera P6 software in a version compatible with Government's current version. Importing data into P6 using data conversion techniques or third party software is cause for rejection of the submitted schedule. Schedules with Performing Organizational Breakdown Structure (POBS) data is cause for rejection.

#### 1.9 DESIGNATED PROJECT SCHEDULER

Within 30 calendar days from receiving the Notice to Proceed, submit to the Contracting Officer for approval an individual who will serve as the Designated Project Scheduler. Include a copy of the candidate's resume with qualifications. The Contracting Officer may remove the Designated Project Scheduler, and require replacement, if the scheduler does not effectively fulfill their duties in accordance with the contract requirements. Payment request will not be processed without an approved Designated Project Scheduler.

##### 1.9.1 Qualifications

The Designated Project Scheduler must have prepared and maintained at least three previous construction schedules, of similar size and complexity to this contract, using Primavera P6.

### 1.9.2 Duties

Duties of the Designated Project Scheduler include to be actively involved and be responsible for the following:

- a. Prepare Baseline NAS.
- b. Prepare Three-Week Look Ahead Schedules.
- c. Prepare Monthly Network Analysis updates.
- d. Prepare tabular reports.
- e. Prepare Time Impact Analysis (TIA) as necessary.
- f. Provide certification that NAS and TIA submittals conform to the contract requirements.
- g. Participate with the Prime Contractor and Government Representative in a monthly meeting at the job site in-person, and scheduled with sufficient time to support the Monthly Network Analysis Updates process, to discuss project status, schedule updates, critical activities including outages, potential delays, and contract modifications impacting the schedule. Have a computer with P6 software available during the meeting.

### 1.10 NETWORK SYSTEM FORMAT

Prepare the schedule in accordance with the following Primavera P6 settings and parameters. Deviation from these settings and parameters, without prior consent of the Contracting Officer, is cause for rejection of schedule submission.

#### 1.10.1 Schedule Activity Properties and Level of Detail

##### 1.10.1.1 Activity Identification and Organization

- a. Identify construction activities planned for the project and other activities that could impact project completion if delayed in the NAS.
- b. Each activity must have a unique name.
- c. Identify administrative type activity/milestones, including all pre-construction submittal and permit requirements prior to demolition or construction stage.
- d. Include times for procurement, Contractor quality control and construction, acceptance testing and training in the schedule.
- e. Include the Government approval time required for the submittals that require Government Approval prior to construction, as indicated in Section 01 33 00 SUBMITTAL PROCEDURES.
- f. Include the Government concurrence period required for outage request package submittals, as indicated in Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME).
- g. Create separate activities for each Phase, Area, Floor Level and Location the activity is occurring.

- h. Do not use construction category activity to represent non-work type reference (e.g. Serial Letter, Request for Information) in NAS. Place Non-work reference within the P6 activity details notebook.

Activity categories included in the schedule are specified below.

#### 1.10.1.2 Activity Logic

- a. With the exception of the Contract Award and Contract Completion Date (CCD) milestone activities, activity must not be open-ended; each activity must have at least one predecessor and at least one successor.
- b. Activities must not have open start or open finish (dangling) logic.
- c. Do not use lead or lag logic without Contracting Officer prior approval.
- d. Minimize redundant logic ties.
- e. Once an activity exists on the schedule it must not be deleted or renamed to change the scope of the activity and must not be removed from the schedule logic without approval from the Contracting Officer.
  - (1) While an activity cannot be deleted, where said activity is no longer applicable to the schedule, but must remain within the logic stream for historical record, change the activity original and remaining duration to zero and clearly label "(NO LONGER REQUIRED)" after the activity name. Actual finish date for activity that falls behind the data date. Redistribute accordingly any remaining budget associated with that activity, to other remaining appropriate activity.
  - (2) Document any such change in the activities' "Notebook," including a date and explanation for the change.
  - (3) The ID number for a "NO LONGER REQUIRED" activity must not be re-used for another activity.

#### 1.10.1.3 Longest Path Activity Baseline Limitation

For P6 settings, critical activities are defined as being on the Longest Path. Longest Path (Critical) Activities must not make up more than 30 percent of all activity within the Construction Baseline Schedule.

#### 1.10.1.4 Assigned Calendars

All NAS activity must be assigned calendars that reflect required and anticipated non-work days.

#### 1.10.1.5 Activity Categories

##### 1.10.1.5.1 Pre-construction Activities

Examples of pre-construction activities include, but are not limited to, bond approval, permits, pre-construction submittals and approvals. Include pre-construction activities that are required to be completed prior to the Contractor starting the demolition or construction stage of work.

#### 1.10.1.5.2 Procurement Activities

Examples of procurement activities include, but are not limited to: Material/equipment submittal preparation, submittal and approval of material/equipment; material/equipment fabrication and delivery, and material/equipment on-site. As a minimum, separate procurement activities must be provided for critical items, long lead items, items requiring Government approval and material/equipment procurement for which payment will be requested in advance of installation. Show each delivery with relationship tie to the Construction Activity specifically for the delivery.

#### 1.10.1.5.3 Government Activities

Government and other agency activities that could impact progress must be clearly identified. Government activities include, but are not limited to; Government approved submittal reviews, Government conducted inspections/tests, environmental permit approvals by State regulators, utility outages, and delivery of Government Furnished Material/Equipment.

#### 1.10.1.5.4 Construction Quality Management (CQM) Activities

The Preparatory and Initial Phase meetings for each Definable Feature of Work identified in the Contractor's Quality Control Plan must be included in the Three-Week Look Ahead Schedule. Preparatory and Initial phase meetings are not required in the NAS, but can be represented by a start milestone linked to successor parent Construction Activity. The Follow-up Phase must be represented by the Construction Activities themselves in the NAS.

#### 1.10.1.5.5 Construction Activities

On-site construction activities that are the responsibility of the Contractor or Contractor's subcontractors must not have a duration in excess of 20 working days without prior approval by the Contracting Officer. Contractor activities must be driven by calendars that reflect Saturdays, Sundays and all Federal Holidays as non-work days, unless otherwise defined in this contract. Federal Holidays are as defined in 5 USC 6103.

#### 1.10.1.5.6 Turnover and Closeout Activities

Include activities or milestones for items on the NAVFAC Red Zone Checklist/POAM that are applicable to this project. As a minimum, include required Contractor testing, required Government acceptance inspections on equipment, Pre-Final Inspection, Punch List Completion, Final Inspection and Acceptance. Add an unconstrained start milestone for the initial NAVFAC Red Zone - Facility Turnover Planning Meeting at approximately 75 percent construction contract completion or six months prior to Contract Completion Date (CCD), whichever is sooner. Include a separate NAVFAC Red Zone - Facility Turnover Planning Meeting Milestone for each phase if the contract requires construction to be completed in phases.

#### 1.10.1.5.7 Testing of HVAC - DALT, TAB, and PVT Activities

Include in the baseline schedule, activities and milestones associated with Government acceptance of Duct Air Leakage Test (DALT), Testing, Adjusting, and Balancing (TAB) and Performance Verification Test (PVT) as required and in accordance with Section 23 05 93 TESTING, ADJUSTING AND

BALANCING FOR HVAC and Section 23 09 00 INSTRUMENTATION AND CONTROL FOR HVAC.

- a. Identify the general area or location(s) for Government Acceptance Testing of DALT, TAB and PVT.
- b. Incorporate into the baseline schedule, time periods required for advance notification of work, and Government submittal review in accordance with Section 23 05 93 TESTING, ADJUSTING AND BALANCING FOR HVAC, paragraph DALT AND TAB SUBMITTAL AND WORK SCHEDULE.
- c. Include the following as schedule activities or milestones:
  - (1) Pre-DALT/TAB/PVT Meeting
  - (2) TAB Design Review Report, Government review
  - (3) TAB Pre-Field Engineering Report, Government review
  - (4) DALT Field Work
  - (5) DALT Field Acceptance Testing
  - (6) Certified Final DALT Report, Government review
  - (7) Control Contractors PVT Plan, Government review
  - (8) Equipment Suppliers PVT Plan, Government review
  - (9) Season I TAB Field Work
  - (10) Season I Certified Final TAB Report, Government review
  - (11) Endurance Testing, Government review
  - (12) PVT Field Work
  - (13) PVT Report, Government review
  - (14) Season I TAB Field Acceptance Testing
  - (15) Season II TAB Field Work
  - (16) Season II Certified Final TAB Report, Government review
  - (17) Season II TAB Field Acceptance Testing

#### 1.10.1.5.8 Commissioning Activities

Include in the baseline schedule activities and milestones associated with Commissioning.

- a. Identify the general area or location(s) of systems for Commissioning Inspection and Testing
- b. Incorporate into the baseline schedule time periods for Government submittal review

#### 1.10.1.6 Contract Milestones and Constraints

##### 1.10.1.6.1 Project Start Date Milestones

Include as the first activity on the schedule a start milestone titled, "Contract Award", which must have a Mandatory Start constraint equal to the Contract Award Date.

##### 1.10.1.6.2 Preconstruction Meeting Milestone

Include an unconstrained finish milestone on the schedule titled, "Pre construction Meeting". The Preconstruction meeting may be a single day, or it may range over several days. The intent to cover all the Precon topics, including Partnering and DD1354.

##### 1.10.1.6.3 Preconstruction Submittals Finish Milestone

Include an unconstrained finish milestone on the schedule titled, "Preconstruction Submittals". This milestone is complete when all required preconstruction submittals have been reviewed and approved by the Government.

##### 1.10.1.6.4 Contractor Mobilization Finish Milestone

Include an unconstrained finish milestone on the schedule titled, "Contractor Mobilization".

##### 1.10.1.6.5 NAVFAC Red Zone - Facility Turnover Planning Meeting Milestones

See paragraph TURNOVER AND CLOSEOUT ACTIVITIES above.

##### 1.10.1.6.6 Substantial Completion Milestone

Include an unconstrained finish milestone on the schedule titled "Substantial Completion." Substantial Completion is defined as the point in time the Government would consider the project ready for beneficial occupancy wherein by mutual agreement of the Government and Contractor, Government use of the facility is allowed while construction access continues in order to complete remaining items (e.g. punch list and other close out submittals). Include a separate Substantial Completion Milestone for each phase if the contract requires construction to be completed in phases.

##### 1.10.1.6.7 DD-1354 Finish Milestone

Add unconstrained finish milestone, titled "DD-1354" and scheduled 30 calendar days prior to Substantial Completion, whenever a Form DD-1354 is required in accordance with Section 01 78 00.00 22 CLOSEOUT SUBMITTALS (PWD ME).

##### 1.10.1.6.8 Projected Completion Milestone

Include an unconstrained finish milestone on the schedule titled "Projected Completion." Projected Completion is defined as the point in time all contract requirements are complete and verified by the Government with a successful Final Inspection in accordance with Section 01 45 00.00 22 QUALITY CONTROL (PWD ME). This milestone must have the Contract Completion Date (CCD) milestone as its only successor.

#### 1.10.1.6.9 Contract Completion Date (CCD) Milestone

Last schedule entry must be an unconstrained finish milestone titled "Contract Completion (CCD: DD-MM-YY)." DD-MM-YYYY is the current contract completion date at data date, day-month-year corresponding to P6 Must Finish By Date. NAS milestone updates of Project Completion finish date for longest path must reflect calculated float as positive or negative based on CCD. Calculation of schedule updates must be such that if the finish of the "Projected Completion" milestone falls after the contract completion date, then negative float is calculated on the longest path. If the finish of the "Projected Completion" milestone falls before the contract completion date, the float calculation must reflect positive float on the longest path.

#### 1.10.1.6.10 Additional Milestones

Provide up to 5 additional milestones as required by Contracting Officer.

#### 1.10.1.7 Work Breakdown Structure & Activity Code

At a minimum, establish a Work Breakdown Structure (WBS) and provide activity codes identified as follows:

##### 1.10.1.7.1 Work Breakdown Structure (WBS)

Group all activities and milestones within appropriate WBS categories including, at a minimum, the following:

a. Project Milestones:

- (1) Management Milestones
- (2) Project Administrative Meetings
- (3) Permits

b. Pre-Construction Phase:

- (1) Submittals and Reviews
- (2) Procurement
- (3) Mobilization

c. Construction Phase: Create multiple sub-sections in accordance with project specific categories of work including in WBS descending order as follows:

- (1) General Area
  - (a) Type of Work Item
    - 1. Location

d. Project Closeout: Include activity items such as, but not limited to, Punchlist, Demobilization, O&M, As-built Drawings, Training, and As-built NAS.

e. Modifications: Create sub-category of Conformed and Non-Conformed

under Modification WBS. Create multiple sub-sections as the project progresses identified by issue and Fragnet placed in Conformed for modifications issued prior data date, or Non-Conformed for issues not modified to contract prior data date.

- f. Removed Activity: Activity is "removed" by remaining within logic sequence, eliminating duration and adding "(NO LONGER REQUIRED)" after Activity Name in Activity Table.
- g. Commissioning & Testing:
  - (1) Specific area/locations of commissioning
  - (2) Final Testing
  - (3) Training

#### 1.10.1.7.2 Responsibility Code

Use "RESP" for Activity Code Name. All activities in the project schedule must be identified with the resource for completing the task. Activities must not belong to more than one responsible party.

#### 1.10.1.7.3 Activity Category Code

Provide user defined "CAT" codes for Project Level activity codes. Use the following codes:

- a. Assign "PROC" value to Procurement type activity
- b. Assign "PRE-CON" value to Pre-construction activity
- c. Assign "CONS" value to Construction type activity
- d. Assign "TEST" value to dedicated testing type activities
- e. Assign "CX" value to dedicated Commissioning type activities
- f. Assign "CLOS" value to dedicated Close Out type activity
- g. Assign "OTHR" to other activity not otherwise designated

#### 1.10.1.7.4 Drawing Code

Identify all activities in the project schedule with its respective Drawing Code. The Drawing Code is the Sheet Number on the primary project drawing which indicates work to be performed. If an activity does not have an applicable Drawing Code (e.g. Mobilize), the code must be "0000".

#### 1.10.1.7.5 Additional Activity Codes

Provide up to an additional five activity codes as required by the Contracting Officer.

#### 1.10.1.8 Adverse Weather Lost Work Days

Use the National Oceanic and Atmospheric Administration's (NOAA) Summary of Monthly Normals report to obtain the historical average number of days each month with precipitation, using a nominal 30-year, greater than 0.10

inch precipitation amount parameter, as indicated on the Station Report for the NOAA location closest to the project site as the basis for establishing a "Weather Calendar" showing the number of anticipated non-workdays for each month due to adverse weather, in addition to Saturdays, Sundays and all Federal Holidays as non-work days.

Assign the Weather Calendar to any activity that could be impacted by adverse weather. The Contracting Officer will issue a modification in accordance with the contract clauses, giving the Contractor a time only extension for the difference of days between the anticipated and actual adverse weather delay if the number of actual adverse weather delay days exceeds the number of days anticipated for the month in which the delay occurs and the adverse weather delayed activities are on the longest path to contract completion in the period when delay occurred. A lost workday due to weather conditions is defined as a day in which the Contractor cannot work at least 50 percent of the day on the impacted activity. Impacts resulting from adverse weather must be documented in Narrative Report for the month that it occurred.

Make changes to P6 project calendars to reflect as-built conditions where work occurred where originally anticipated as non-work days, and where work did not occur (lost work day).

#### 1.10.1.9 Anticipated Restricted Delays

Unless otherwise noted or defined in Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME), allow in the schedule eight lost workdays for every one year of project duration for instances where base access is not permitted or where work areas are temporarily not accessible for security reasons which causes a delay in the work. Use Anticipated Restricted Delays as basis for establishing a "Security Calendar" showing the number of anticipated non-workdays for each month due to anticipated restrictions, in addition to anticipated adverse weather, Saturdays, Sundays and all Federal Holidays as non-work days. Assign the Security Calendar to any activity that could be impacted by restriction delays. The Contracting Officer will issue a modification in accordance with the contract clauses, giving the Contractor a time extension for the difference of days between the anticipated and actual lost work days if the number of actual restriction delay days exceeds the number of anticipated for the month in which the delay occurs and the restriction delayed activities are critical to contract completion. A lost workday due to restriction delay is defined as a day in which the Contractor cannot work at least 50 percent of the day on the impacted activity.

Impacts resulting from restriction delays must be documented in Narrative Report for the month that it occurred.

Make changes to P6 project calendars to reflect as-built conditions where work occurred where originally anticipated as non-work days, and where work did not occur (lost work day).

#### 1.10.1.10 Cost Loading

The Project Network Analysis Schedule (NAS) must be cost-loaded and will provide the basis for progress payments. Earned Value Reports must be derived from and correspond to cost loaded NAS. Use the Critical Path Method (CPM) and the Precedence Diagram Method (PDM) to satisfy time and cost applications.

Sum of all costs assigned to activities must equal the current contract value as of the data date of the baseline or update schedule. Activity cost loading must be without front-end loading. Provide additional documentation if requested by the Contracting Officer.

#### 1.10.1.10.1 Cost Loading Activities

- a. Cost load construction activities. Define construction activities as on-site work activities that can be traced directly to the construction, alteration, demolition, repair of a project facility, infrastructure, or sitework.
- b. Assigned costs for materials which payment will be requested in advance of installation, including their quantities, to their respective procurement activities that were approved by the Contracting Officer. Assign labor costs, including their quantities, for material and equipment paid for after installation to their respective construction activities.
- c. Costs for mobilization will not be paid as individual pay items with the exception of batch plant set-up, mobilization of dredging equipment or other similar labor-intensive situations. If payment for mobilization costs are approved, assign costs for demobilization activities. The value of demobilization activities must not be less than 40 percent of the total costs for mobilization/demobilization activities. If not approved as a separate line item, evenly disperse over construction activities the costs for mobilization and/or demobilization.
- d. The value of commissioning, testing and closeout WBS section may not be less than 10 percent of the total costs for procurement and construction activities.
- e. ALL activities assigned Government responsibility will have Zero Cost. No contractor cost should be assigned to an activity designated as a Government responsibility.
- f. Do not include field overhead positions as individual cost loaded activities. Evenly disperse indirect costs (e.g., meetings, presentations, submittals, surveys, haul road or storage yard maintenance, dust control, security) and profit to construction activities assigned to the Construction Phase WBS level.

#### 1.10.1.10.2 Partial Payment

Breakdown unit of measure and cost must be defined within P6 Activity Detail Expenses for partial payment of any cost loaded activity. Lump sum cost loaded activity will not be partially paid.

#### 1.10.2 Schedule Software Settings and Restrictions

- a. Activity Constraints: Date/time constraint(s), other than those required by the contract, are not allowed unless accepted by the Contracting Officer. Identify any constraints proposed and provide an explanation for the purpose of the constraint in the Narrative Report as described in paragraph REQUIRED TABULAR REPORTS.
- b. Default Progress Data Disallowed: Actual Start is date work begins on activity with intent to pursue work to substantial completion. Actual

Finish is date work is substantially complete to point where successor activity can begin. Actual dates on the CPM schedule must correspond with activity dates reported on the Contractor Quality Control and Production Reports.

- c. At a minimum, include the following settings and parameters in P6 Schedule preparation:
- (1) General: Define or establish Calendars and Activity Codes at the "Project" level, not the "Global" level.
  - (2) Admin Drop-Down Menu, Admin Preferences, Time Periods Tab:
    - (a) Set time periods for P6 to 8.0 Hours/Day, 40.0 Hours/Week, 172.0 Hours/Month and 2000.0 Hours/Year.
    - (b) Use assigned calendar to specify the number of work hours for each time period: Must be checked.
  - (3) Admin Drop-Down Menu, Admin Preferences, Earned Value Tab:
    - (a) Technique for computing performance percent complete: Use "Activity percent Complete"
    - (b) Technique for computing Estimate to Complete: Use "PF = 1".
    - (c) Earned Value Calculation: Use "Budgeted values with current dates".
  - (4) Project Level, Dates Tab:
    - (a) Set "Must Finish By" date to "Contract Completion Date", and set "Must Finish By" time to 05:00pm.
  - (5) Project Level, Defaults Tab:
    - (a) Duration Type: Set to "Fixed Duration & Units".
    - (b) Percent Complete Type: Set to "Physical".
    - (c) Activity Type: Set to "Task Dependent".
    - (d) Calendar: Set to "Standard 5 Day Workweek". Calendar must reflect Saturday, Sunday and all Federal holidays as non-work days. Alternative calendars may be used with Contracting Officer approval.
  - (6) Project Level, Calculations Tab:
    - (a) Default Price/Unit for activities without resource or role Price/Units: Set to "\$1/h".
    - (b) Activity percent complete based on activity steps: Must be Checked.
    - (c) Link Budget and At Completion for not started activities: Must be Checked.
    - (d) Reset Remaining Duration and Units to Original: Must be

Selected.

(e) Subtract Actual from At Completion: Must be Selected.

(f) Recalculate Actual units and Cost when duration percent complete changes: Must be Checked.

(g) Update units when costs change on resource assignments: Must be Unchecked.

(h) Link Actual to Date and Actual This Period Units and Cost: Must be Checked.

(7) Project Level, Settings Tab:

(a) Define Critical Activities: Check "Longest Path".

(8) Work Breakdown Structure Level, Earned Value Tab:

(a) Technique for Computing Performance Percent Complete: "Activity percent complete" is selected.

(b) Technique for Computing Estimate to Complete (ETC): "PF = 1" is selected.

#### 1.10.3 Required Tabular Reports and Native P6 XER Files

Include the following reports with the Baseline, Monthly Update and any other required schedule submittals:

##### a. Time Scaled Logic Schedule

Provide formatted 11 by 17-inch Time-scaled Logic Schedule in color and landscape-oriented with each schedule submittal. Clearly show activities on the longest path setting Gantt chart longest path activity bars to red. Group activities by WBS and sort by finish date in ascending order. Include the following information in column form for each activity and include accompanying Gantt chart:

(1) Activity ID

(2) Activity Name

(3) Original Duration

(4) Remaining duration

(5) Physical Percent Complete

(6) Start Date

(7) Finish Date

(8) Total Float

(9) Project-level Calendar

##### b. Previous Monthly Update Comparison Time Scaled Logic Schedule (Submit with all Monthly Update Schedule Submittals.)

Provide formatted 11 by 17-inch Time-scaled Logic Schedule in color and landscape-oriented with each monthly update schedule submittal. Clearly show activities on the current month longest path setting Gantt chart longest path activities bars to red. Show previous month activities as yellow bars and previous month milestones in yellow within Gantt chart. Sort by finish date in ascending order. Filter activities for longest path. Maintain and assign the accepted previous month update or the accepted baseline schedule for the first update submittal as the baseline and primary baseline in P6 before printing the schedule. Include the following information in column form for each activity and include accompanying Gantt chart:

- (1) Activity ID
  - (2) Activity Name
  - (3) Original Duration
  - (4) Current Month Remaining Duration
  - (5) Current Month Start Date
  - (6) Previous Month Update Start Date (BL Project Start)
  - (7) Start Date Delta between Current Month and Previous Month  
(Variance - BL Project Start Date)
  - (8) Current Month Finish Date
  - (9) Previous Month Finish Date (BL Project Finish)
  - (10) Finish Date Delta between Current Month and Previous Month  
(Variance - BL Project Start Date)
  - (11) Current Month Total Float
- c. P6 native XER file: Include the back-up native .xer program file compatible with the Government version of Primavera P6. Each native schedule file must have a unique file name to include project name and data date using (yyyy-mm-dd) convention. Each native schedule must have a unique Project ID and Project Name.
- d. Log Report: P6 Scheduling/Leveling Report.
- e. Narrative Report: Identify and justify:
- (1) Provide Project Summary Data in format below:
    - (a) Data Date \_\_\_\_\_
    - (b) Award Date: \_\_\_\_\_
    - (c) Original Project Duration: \_\_\_\_\_ days post Award Date
    - (d) Current Project Duration: \_\_\_\_\_ days post Award Date
    - (e) Time percent elapsed: \_\_\_\_\_ percent at data date

- (f) Original CCD: \_\_\_\_\_
  - (g) Current CCD: \_\_\_\_\_ (thru MOD \_\_\_\_\_)
  - (h) Anticipated CCD: \_\_\_\_\_ (\_\_\_\_ calendar days early/late)
  - (i) Original Contract Value: \$\_\_\_\_\_
  - (j) Current Contract Value: \$\_\_\_\_\_
  - (k) Invoiced Amount: \$\_\_\_\_\_ (\_\_\_\_ percent)
  - (l) Cost Growth: \_\_\_\_ percent
  - (m) Schedule Growth: \_\_\_\_ percent
  - (n) There are a total of \_\_\_\_\_ activities, \_\_\_\_\_ activities complete (\_\_\_\_ percent), \_\_\_\_\_ activities in progress (\_\_\_\_ percent), \_\_\_\_\_ activities not started (\_\_\_\_ percent). Of the in progress and not started activities; \_\_\_\_\_ (\_\_\_\_ percent) are on the longest path. The longest path has duration of \_\_\_\_\_ calendar days from data-date to anticipated project completion.
- (2) Progress made in each area of the project;
  - (3) Longest Path;
  - (4) Date/time constraint(s), other than those required by the contract
  - (5) Listing of all changes made between the previous schedule and current updated schedule include: added or deleted activities, original and remaining durations for activities that have not started, logic (sequence constraint lag/lead), milestones, planned sequence of operations, longest path, calendars or calendar assignments, and cost loading;
  - (6) Any decrease in previously reported activity Earned Amount;
  - (7) Pending items and status thereof, including permits, changes orders, and time extensions;
  - (8) Status of Contract Completion Date and interim milestones;
  - (9) Status of Projected Completion Milestone and account of difference in calendar days between previous update Projected Completion Milestone
  - (10) Current and anticipated delays listing Activity Names and IDs for impacted activities(describe cause of delay and corrective actions(s) and mitigation measures to minimize);
  - (11) Description of current and potential future schedule problem areas.
  - (12) Identification of any weather and restricted lost time as compared to anticipated weather for the month and anticipated restricted days for which the update is submitted. Impacts resulting from adverse weather must be documented in tabular form showing the calendar month (or billing period) with the days on

which construction activity incurred Lost Work Days due to adverse weather. In narrative form, describe the adverse weather cause such as precipitation measurement, temperature, wind or other influencing factors, and why work was impacted. Describe the construction activity(s) that was (were) scheduled, impacted.

Each entry in the narrative report must cite the respective Activity ID and Activity Name, the date and reason for the change, and description of the change.

- f. Earned Value Report: Derive from and correspond to P6 cost loaded schedule. List all activities having a budget amount cost loaded. Compile total earnings on the project from notice to proceed to current progress payment request. Show current budget, previous physical percent complete, to-date physical percent complete, previous earned value, to-date earned value, cost this period and cost to complete on the report for each activity.
- g. Schedule Variance Control (SVC) Diagram: With each schedule submission, provide a SVC diagram showing 1) A Cash Flow Curve indicating planned project cost based on each of projected early and projected late activity finish dates and 2) one curve for Earned Value to-date. Revise Cash Flow Curves when the contract is modified, or as directed by the Contracting Officer Include a legend on report clearly indication 3 curves: early finish, late finish, and earned-value to date.

Use the following settings in Activity Usage Profile Options:

- (1) In the Data section, under Display, the radio box for Cost must be selected.
- (2) In the Data section, under Filter for Bars/Graphs, the checkbox for Total must be checked.
- (3) In the Show Bars/Curves section:
  - (a) Under the By Date column, the checkboxes for Baseline, Actual and Remaining Late must be checked. The checkboxes for Budgeted and Remaining Early must be unchecked.
  - (b) Under the Cumulative column, the checkboxes for Baseline, Actual and Remaining Late must be checked. The checkboxes for Budgeted and Remaining Early must be unchecked.
  - (c) Set the color for Baseline to green.
  - (d) Set the color for Actual to blue.
  - (e) Set the color for Remaining Late to red.
- (4) In the Show Earned Value Curves section, the checkboxes for Planned Value Cost, Earned Value Cost and Estimate at Completion must be unchecked.
- h. Logic Diagram showing timescale from data date to 60 days after data date with filter for longest path. Leave Group By selection blank and sort by finish date in ascending order.

- i. Baseline or Monthly Update Checklist as applicable completed and certified by the Designated Project Scheduler. Baseline Project Schedule and Monthly Update Schedule Checklists can be found on the Whole Building Design Guide website at <https://www.wbdg.org/dod/ufgs/ufgs-forms-graphics-tables>
- j. Screen shot PDF of Primavera P6 Time Periods Settings referenced in paragraph SCHEDULE SOFTWARE SETTINGS AND RESTRICTIONS, list item c.(2): ADMIN DROP-DOWN MENU, ADMIN PREFERENCES, TIME PERIODS TAB
- k. Daily Reported Production Activity: Submit on a monthly basis, in electronic spreadsheet (format provided by the Government), summary of daily reported production activity for the reporting month in the update schedule. Use the following columns for reporting:
  - (1) Date
  - (2) Activity ID
  - (3) Work Description
  - (4) Contractor
  - (5) Billable Hours
- l. HVAC/COMMISSIONING KTR Checklist. See Section 23 09 00 INSTRUMENTATION AND CONTROL FOR HVAC for checklist requirements. Complete checklist listing all items with baseline submittal. Complete checklist as required to complete project, submitting complete checklist in intermediately following monthly update submittal.

#### 1.11 CONTRACT MODIFICATION

##### 1.11.1 Time Impact Analysis (TIA)

Submit a Time Impact Analysis with each cost and time proposal for a proposed change. TIA must illustrate the influence of each change or delay on the Contract Completion Date or milestones. No time extensions will be granted nor delay damages paid unless a delay occurs which consumes all available Project Float, impacts the longest path, and extends the Projected Completion beyond the Contract Completion Date.

- a. Each TIA must be in both narrative and schedule form. The narrative must:
  - 1. Define the scope and conditions of the change;
  - 2. Provide start and finish dates of impact;
  - 3. Successor(s) and predecessor(s) activities to impact period;
  - 4. Responsible party;
  - 5. Describe how the impact originated;
  - 6. How it impacts the schedule's longest path.
- b. The schedule submission must consist of three native XER files:

- (1) Fragnet used to define the scope of the changed condition
  - (2) Most recent accepted schedule update as of the time of the impact start date. Update this schedule to show all activity progress as of the time of the impact start date. The impact start date is identified as the time when an existing activity is impeded for either starting or finishing.
  - (3) The impacted schedule that has the fragnet inserted in the updated schedule and the schedule "run" so that the new completion date is determined.
- c. For claimed as-built project delay, the inserted fragnet TIA method must be modified to account for as-built events known to occur after the data date of schedule update used. Updated schedules for periods following the impact start date will be used to evaluate how the project progressed (as-built) through the finish of impact. Impact to longest path must be determined for each following update period.
- d. All TIAs must include any mitigation, and must determine the apportionment of the overall delay assignable to each individual delay. Apportionment must provide identification of delay type and classification of delay by compensable and non-compensable events. The associated narrative must clearly describe analysis methodology used, and the findings in a chronological listing beginning with the earliest delay event.

(1) Identify and classify types of delay defined as follows:

- (a) Force majeure delay (e.g. weather delay): Any delay event caused by something or someone other than the Government or the Contractor, or the risk of which has not been assigned solely to the Government or the Contractor. If the force majeure delay is on the longest path, in absence of other types of concurrent delays, the Contractor is granted an extension of contract time, classified as a non-compensable event.
  - (b) A Contractor-delay: Any delay event caused by the Contractor, or the risk of which has been assigned solely to the Contractor. If the contractor-delay is on the longest path, in absence of other types of concurrent delays, Contractor is not granted extension of contract time, and classified as a non-compensable event. Where absent other types of delays, and having impact to project completion, Contractor must provide to Contracting Officer a Corrective Action Plan identifying plan to mitigate delay.
  - (c) A Government-delay: Any delay event caused by the Government, or the risk of which has been assigned solely to the Government. If the Government-delay is on the longest path, in absence of other types of concurrent delays, the Contractor is granted an extension of contract time, and classified as a compensable event.
- (2) Functional concurrency must be used to analyze concurrent delays, where: separate delay issues delay project completion, do not necessarily occur at same time, rather occur within same monthly schedule update period at minimum, or within same as-built period under review. If a combination of functionally concurrent delay types occurs, it is considered Concurrent Delay, which is defined

in the following combinations:

(a) Government-delay concurrent with contractor-delay: excusable time extension, classified non-compensable event.

(b) Government-delay concurrent with force majeure delay: excusable time extension, classified non-compensable event.

(c) Contractor-delay concurrent with force majeure delay: excusable time extension, classified non-compensable event.

(3) Pacing delay reacting to another delay (parent delay) equally or more critical than paced activity must be identified prior to pacing. Contracting Officer will notify Contractor prior to pacing. Contractor must notify Contracting Officer prior to pacing. Notification must include identification of parent delay issue, estimated parent delay time period, paced activity(s) identity, and pacing reason(s). Pacing Concurrency is defined as follows:

(a) Government-delay concurrent with contractor-pacing: excusable time extension, classified compensable event.

(b) Contractor-delay concurrent with Government-pacing: inexcusable time extension, classified non-compensable event

e. Submit electronic file containing the narrative and the source schedule files used in the time impact analysis.

#### 1.12 PROJECT FLOAT

Project Float is the length of time between the Contractor's Projected Completion Milestone and the Contract Completion Date. Project Float available in the schedule will not be for the exclusive use of either the Government or the Contractor.

The use of Resource Leveling or other techniques used for the purpose of artificially adjusting activity durations to consume float and influence longest path is prohibited.

#### PART 2 PRODUCTS

Not used.

#### PART 3 EXECUTION

Not used.

-- End of Section --

SECTION 01 33 00

SUBMITTAL PROCEDURES

08/18, CHG 4: 02/21

PART 1 GENERAL

This Section applies only to Design-Bid-Build projects at the Portsmouth Naval Shipyard and PWD ME AOR Facilities.

1.1 DEFINITIONS

1.1.1 Submittal Descriptions (SD)

Submittal requirements are specified in the technical sections. Examples and descriptions of submittals identified by the Submittal Description (SD) numbers and titles follow:

SD-01 Preconstruction Submittals

Submittals that are required prior to or commencing with the start of work on site. Submittals that are required prior to or at the start of construction (work) or the next major phase of the construction on a multiphase contract. No work is authorized without an approved submittal.

Preconstruction Submittals include schedules and a tabular list of locations, features, and other pertinent information regarding products, materials, equipment, or components to be used in the work.

Refer to Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME) for a partial listing of required Preconstruction Submittals.

SD-02 Shop Drawings

Drawings, diagrams and schedules specifically prepared to illustrate some portion of the work.

Diagrams and instructions from a manufacturer or fabricator for use in producing the product and as aids to the Contractor for integrating the product or system into the project.

Drawings prepared by or for the Contractor to show how multiple systems and interdisciplinary work will be coordinated.

SD-03 Product Data

Catalog cuts, illustrations, schedules, diagrams, performance charts, instructions and brochures illustrating size, physical appearance and other characteristics of materials, systems or equipment for some portion of the work.

Samples of warranty language when the contract requires extended product warranties.

SD-04 Samples

Fabricated or unfabricated physical examples of materials, equipment

or workmanship that illustrate functional and aesthetic characteristics of a material or product and establish standards by which the work can be judged.

Color samples from the manufacturer's standard line (or custom color samples if specified) to be used in selecting or approving colors for the project.

Field samples and mock-ups constructed on the project site establish standards ensuring work can be judged. Includes assemblies or portions of assemblies that are to be incorporated into the project and those that will be removed at conclusion of the work.

#### SD-05 Design Data

Design calculations, mix designs, analyses or other data pertaining to a part of work.

#### SD-06 Test Reports

Report signed by authorized official of testing laboratory that a material, product or system identical to the material, product or system to be provided has been tested in accord with specified requirements. Unless specified in another section, testing must have been within three years of date of contract award for the project.

Report that includes findings of a test required to be performed on an actual portion of the work or prototype prepared for the project before shipment to job site.

Report that includes finding of a test made at the job site or on sample taken from the job site, on portion of work during or after installation.

Investigation reports

Daily logs and checklists

Final acceptance test and operational test procedure

#### SD-07 Certificates

Statements printed on the manufacturer's letterhead and signed by responsible officials of manufacturer of product, system or material attesting that the product, system, or material meets specification requirements. Must be dated after award of project contract and clearly name the project.

Document required of Contractor, or of a manufacturer, supplier, installer or Subcontractor through Contractor. The document purpose is to further promote the orderly progression of a portion of the work by documenting procedures, acceptability of methods, or personnel qualifications.

Confined space entry permits

Text of posted operating instructions

The Contractor shall maintain submitted certifications and licenses

through the duration of the project. Any certification or license that expires prior to or during the execution of the affected Definable Feature of Work (DFOW) shall be resubmitted to the Contracting Officer for approval.

#### SD-08 Manufacturer's Instructions

Preprinted material describing installation of a product, system or material, including special notices and (SDS) concerning impedances, hazards and safety precautions.

#### SD-09 Manufacturer's Field Reports

Documentation of the testing and verification actions taken by manufacturer's representative at the job site, in the vicinity of the job site, or on a sample taken from the job site, on a portion of the work, during or after installation, to confirm compliance with manufacturer's standards or instructions. The documentation must be signed by an authorized official of a testing laboratory or agency and state the test results; and indicate whether the material, product, or system has passed or failed the test.

Factory test reports.

#### SD-10 Operation and Maintenance Data

Data provided by the manufacturer, or the system provider, including manufacturer's help and product line documentation, necessary to maintain and install equipment, for operating and maintenance use by facility personnel.

Data required by operating and maintenance personnel for the safe and efficient operation, maintenance and repair of the item.

Data incorporated in an operations and maintenance manual or control system.

eOMSI submittals per Section 01 78 24.00 22 FACILITY ELECTRONIC OPERATION AND MAINTENANCE SUPPORT INFORMATION (eOMSI).

#### SD-11 Closeout Submittals

Documentation to record compliance with technical or administrative requirements or to establish an administrative mechanism.

Special requirements necessary to properly close out a construction contract. For example, Record Drawings, as-built drawings, and Red Zone documents. Also, submittal requirements necessary to properly close out a major phase of construction on a multi-phase contract.

##### 1.1.2 Approving Authority

Office or designated person authorized to approve the submittal.

##### 1.1.3 Work

As used in this section, on-site and off-site construction required by contract documents, including labor necessary to produce submittals, construction, materials, products, equipment, and systems incorporated or

to be incorporated in such construction. In exception, excludes work to produce SD-01 submittals.

## 1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

### SD-01 Preconstruction Submittals

Submittal Register; G

## 1.3 SUBMITTAL CLASSIFICATION

### 1.3.1 Government Approved (G)

Government approval is required for extensions of design, critical materials, variations, equipment whose compatibility with the entire system must be checked, and other items as designated by the Government.

Within the terms of the Contract Clause SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION, submittals are considered to be "shop drawings."

Submittal review period for Government Approved (G) submittals is outlined in paragraph SCHEDULING with additional clarifications in paragraph VARIATIONS.

### 1.3.2 For Information Only

Submittals not requiring Government approval will be for information only. Within the terms of the Contract Clause SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION, they are not considered to be "shop drawings."

## 1.4 FORWARDING SUBMITTALS REQUIRING GOVERNMENT APPROVAL

As soon as practicable after award of contract, and before procurement or fabrication, provide through NAVFAC's Electronic Construction and Facility Support Contract Management System (eCMS) submittals required in the technical sections of this specification, including shop drawings, product data and samples.

### 1.4.1 O&M Data

Submit data specified for a given item within 30 calendar days after the item is delivered to the contract site.

In the event the Contractor fails to deliver O&M data within the time limits specified, the Contracting Officer may withhold from progress payments 50 percent of the price of the items to which such O&M data apply.

### 1.4.2 Submittals Reserved for NAVFAC MIDLANT Approval

As an exception to the standard submittal procedure for Government Approval, submit the following to NAVFAC MIDLANT, unless otherwise noted:

- a. All fire protection and fire alarm system submittals are to be reviewed by:

NAVFAC MIDLANT C145 Fire Protection  
ATTN: NAVFAC FPE  
Bldg Z-140, RM 126  
9742 Maryland Avenue  
Norfolk, VA 23511

- b. Section 01 91 00.15 20 TOTAL BUILDING COMMISSIONING: SD-06  
Commissioning Plan, Certificate of Readiness, and Commissioning Report  
submittals
- c. Section 23 05 93 TESTING, ADJUSTING, AND BALANCING FOR HVAC: All  
submittals

## 1.5 PREPARATION

### 1.5.1 Transmittal Form

Transmittal forms are no longer required when using eCMS since approval status is tracked on the submittal. Transmittal forms can be attached to submittals if required by the Contracting Officer. Refer to paragraph QUALITY ASSURANCE in Section 01 31 23.13 20 ELECTRONIC CONSTRUCTION AND FACILITY SUPPORT CONTRACT MANAGEMENT SYSTEM (eCMS) for additional instructions on proper transmittal of submittals.

### 1.5.2 Identifying Submittals

The Contractor's Quality Control Manager must prepare, review and stamp submittals, including those provided by a subcontractor, before submittal to the Government.

Identify submittals, except sample installations and sample panels, with the following information permanently adhered to or noted on each separate component of each submittal. Mark each copy of each submittal identically, with the following:

- a. Project title and location
- b. Construction contract number
- c. Dates of the drawings and revisions
- d. Name, address, and telephone number of Subcontractor, supplier, manufacturer, and any other Subcontractor associated with the submittal.
- e. Section number of the specification by which submittal is required
- f. Submittal description (SD) number of each component of submittal
- g. For a resubmission, add alphabetic suffix on submittal description, for example, submittal 18 would become 18A, to indicate resubmission
- h. Product identification and location in project.

### 1.5.3 Submittal Format

#### 1.5.3.1 Format of SD-01 Preconstruction Submittals

When the submittal includes a document that is to be used in the project, or is to become part of the project record, other than as a submittal, do not apply the Contractor's approval stamp to the document itself, but to a separate sheet accompanying the document.

Provide data in the unit of measure used in the contract documents.

#### 1.5.3.2 Format for SD-02 Shop Drawings

Provide shop drawings not less than 8 1/2 by 11 inches nor more than 30 by 42 inches, except for full-size patterns or templates. Prepare drawings to accurate size, with scale indicated, unless another form is required. Ensure drawings are suitable for reproduction and of a quality to produce clear, distinct lines and letters, with dark lines on a white background.

- a. Include the nameplate data, size, and capacity on drawings. Also include applicable federal, military, industry, and technical society publication references.
- b. Dimension drawings, except diagrams and schematic drawings. Prepare drawings demonstrating interface with other trades to scale. Use the same unit of measure for shop drawings as indicated on the contract drawings. Identify materials and products for work shown.

Submit an electronic copy of drawings in PDF format and native electronic format.

##### 1.5.3.2.1 Drawing Identification

Include on each drawing the drawing title, number, date, and revision numbers and dates, in addition to information required in paragraph IDENTIFYING SUBMITTALS.

Number drawings in a logical sequence. Each drawing is to bear the number of the submittal in a uniform location next to the title block. Place the Government contract number in the margin, immediately below the title block, for each drawing.

Reserve a blank space, no smaller than 3 by 4 inches on the right-hand side of each sheet for the Government disposition stamp.

#### 1.5.3.3 Format of SD-03 Product Data

Present product data submittals for each section. Include a table of contents, listing the page and catalog item numbers for product data.

Indicate, by prominent notation, each product that is being submitted; indicate the specification section number and paragraph number to which it pertains.

##### 1.5.3.3.1 Product Information

Supplement product data with material prepared for the project to satisfy the submittal requirements where product data does not exist. Identify this material as developed specifically for the project, with information

and format as required for submission of SD-07 Certificates.

Provide product data in units used in the Contract documents. Where product data are included in preprinted catalogs with another unit, submit the dimensions in contract document units, on a separate sheet.

#### 1.5.3.3.2 Standards

Where equipment or materials are specified to conform to industry or technical-society reference standards of such organizations as the American National Standards Institute (ANSI), ASTM International (ASTM), National Electrical Manufacturer's Association (NEMA), Underwriters Laboratories (UL), or Association of Edison Illuminating Companies (AEIC), submit proof of such compliance. The label or listing by the specified organization will be acceptable evidence of compliance. In lieu of the label or listing, submit a certificate from an independent testing organization, competent to perform testing, and approved by the Contracting Officer. State on the certificate that the item has been tested in accordance with the specified organization's test methods and that the item complies with the specified organization's reference standard.

#### 1.5.3.3.3 Data Submission

Collect required data submittals for each specific material, product, unit of work, or system into a single submittal that is marked for choices, options, and portions applicable to the submittal. Mark each copy of the product data identically. Partial submittals will not be accepted for expedition of the construction effort.

Submit the manufacturer's instructions before installation.

#### 1.5.3.4 Format of SD-04 Samples

##### 1.5.3.4.1 Sample Characteristics

Furnish samples in the following sizes, unless otherwise specified or unless the manufacturer has prepackaged samples of approximately the same size as specified:

- a. Sample of Equipment or Device: Full size.
- b. Sample of Materials Less Than 2 by 3 inches: Built up to 8 1/2 by 11 inches.
- c. Sample of Materials Exceeding 8 1/2 by 11 inches: Cut down to 8 1/2 by 11 inches and adequate to indicate color, texture, and material variations.
- d. Sample of Linear Devices or Materials: 10 inch length or length to be supplied, if less than 10 inches. Examples of linear devices or materials are conduit and handrails.
- e. Sample Volume of Nonsolid Materials: Pint. Examples of nonsolid materials are sand and paint.
- f. Color Selection Samples: 2 by 4 inches. Where samples are specified for selection of color, finish, pattern, or texture, submit the full set of available choices for the material or product specified. Sizes

and quantities of samples are to represent their respective standard unit.

g. Sample Panel: 4 by 4 feet.

h. Sample Installation: 100 square feet.

#### 1.5.3.4.2 Sample Incorporation

Reusable Samples: Incorporate returned samples into work only if so specified or indicated. Incorporated samples are to be in undamaged condition at the time of use.

Recording of Sample Installation: Note and preserve the notation of any area constituting a sample installation, but remove the notation at the final clean-up of the project.

#### 1.5.3.4.3 Comparison Sample

Samples Showing Range of Variation: Where variations in color, finish, pattern, or texture are unavoidable due to nature of the materials, submit sets of samples of not less than three units showing extremes and middle of range. Mark each unit to describe its relation to the range of the variation.

When color, texture, or pattern is specified by naming a particular manufacturer and style, include one sample of that manufacturer and style, for comparison.

#### 1.5.3.5 Format of SD-05 Design Data

Provide design data and certificates on 8 1/2 by 11 inch paper.

#### 1.5.3.6 Format of SD-06 Test Reports

By prominent notation, indicate each report in the submittal. Indicate the specification number and paragraph number to which each report pertains.

#### 1.5.3.7 Format of SD-07 Certificates

Provide design data and certificates on 8 1/2 by 11 inch paper.

#### 1.5.3.8 Format of SD-08 Manufacturer's Instructions

Present manufacturer's instructions submittals for each section. Include the manufacturer's name, trade name, place of manufacture, and catalog model or number on product data. Also include applicable federal, military, industry, and technical-society publication references. If supplemental information is needed to clarify the manufacturer's data, submit it as specified for SD-07 Certificates.

Submit the manufacturer's instructions before installation.

##### 1.5.3.8.1 Standards

Where equipment or materials are specified to conform to industry or technical-society reference standards of such organizations as the American National Standards Institute (ANSI), ASTM International (ASTM),

National Electrical Manufacturer's Association (NEMA), Underwriters Laboratories (UL), or Association of Edison Illuminating Companies (AEIC), submit proof of such compliance. The label or listing by the specified organization will be acceptable evidence of compliance. In lieu of the label or listing, submit a certificate from an independent testing organization, competent to perform testing, and approved by the Contracting Officer. State on the certificate that the item has been tested in accordance with the specified organization's test methods and that the item complies with the specified organization's reference standard.

#### 1.5.3.9 Format of SD-09 Manufacturer's Field Reports

By prominent notation, indicate each report in the submittal. Indicate the specification number and paragraph number to which each report pertains.

#### 1.5.3.10 Format of SD-10 Operation and Maintenance Data (O&M)

Comply with the requirements specified in Section 01 78 23 OPERATION AND MAINTENANCE DATA for O&M Data format.

#### 1.5.3.11 Format of SD-11 Closeout Submittals

When the submittal includes a document that is to be used in the project or is to become part of the project record, other than as a submittal, do not apply the Contractor's approval stamp to the document itself, but to a separate sheet accompanying the document.

Provide data in the unit of measure used in the contract documents.

### 1.5.4 Source Drawings for Shop Drawings

#### 1.5.4.1 Source Drawings

One (1) set of electronic drawings, in the source format, will be provided by the Government at the Preconstruction Meeting.

#### 1.5.4.2 Terms and Conditions

Data contained on these electronic files must not be used for any purpose other than as a convenience in the preparation of construction data for the referenced project. Any other use or reuse is at the sole risk of the Contractor and without liability or legal exposure to the Government. The Contractor must make no claim, and waives to the fullest extent permitted by law any claim or cause of action of any nature against the Government, its agents, or its subconsultants that may arise out of or in connection with the use of these electronic files. The Contractor must, to the fullest extent permitted by law, indemnify and hold the Government harmless against all damages, liabilities, or costs, including reasonable attorney's fees and defense costs, arising out of or resulting from the use of these electronic files.

These electronic source drawing files are not construction documents. Differences may exist between the source drawing files and the corresponding construction documents. The Government makes no representation regarding the accuracy or completeness of the electronic source drawing files, nor does it make representation to the compatibility of these files with the Contractor hardware or software. The Contractor

is responsible for determining if any conflict exists. In the event that a conflict arises between the signed and sealed construction documents prepared by the Government and the furnished source drawing files, the signed and sealed construction documents govern. Use of these source drawing files does not relieve the Contractor of the duty to fully comply with the contract documents, including and without limitation the need to check, confirm and coordinate the work of all contractors for the project. If the Contractor uses, duplicates or modifies these electronic source drawing files for use in producing construction data related to this contract, remove all previous indication of ownership (seals, logos, signatures, initials and dates).

#### 1.5.5 Electronic File Format

Provide submittals in electronic format, with the exception of material samples required for SD-04 Samples items. Compile the submittal file as a single, complete document, and also separately include the native files which were used to create the PDF. The files should include the original digital files used to create the submittal. Name the electronic submittal file specifically according to its contents; refer to the file naming conventions as outlined in Section 01 31 23.13 20 ELECTRONIC CONSTRUCTION AND FACILITY SUPPORT CONTRACT MANAGEMENT SYSTEM (eCMS). Electronic files must be of sufficient quality that all information is legible. Use PDF as the electronic format, unless otherwise specified or directed by the Contracting Officer. Generate PDF files from original documents with bookmarks so that the text included in the PDF file is searchable and can be copied. If documents are scanned, optical character resolution (OCR) routines are required. Index and bookmark files exceeding 30 pages to allow efficient navigation of the file. When required, the electronic file must include a valid electronic signature or a scan of a signature.

All electronic submittal documents must be transferred, shared, and managed through NAVFAC's Electronic Construction and Facility Support Contract Management System (eCMS). Refer to Section 01 31 23.13 20 ELECTRONIC CONSTRUCTION AND FACILITY SUPPORT CONTRACT MANAGEMENT SYSTEM.

#### 1.6 QUANTITY OF SUBMITTALS

##### 1.6.1 Number of SD-04 Samples

- a. Submit two samples, or two sets of samples showing the range of variation, of each required item. One approved sample or set of samples will be retained by the approving authority and one will be returned to the Contractor.
- b. Submit one sample panel or provide one sample installation where directed. Include components listed in the technical section or as directed.
- c. Submit one sample installation, where directed.
- d. Submit one sample of nonsolid materials.

#### 1.7 INFORMATION ONLY SUBMITTALS

Submittals without a "G" designation must be certified by the QC manager and submitted to the Contracting Officer for information-only. Provide information-only submittals to the Contracting Officer a minimum of 14 calendar days prior to the Preparatory Meeting for the associated

Definable Feature of Work (DFOW). Approval from the Contracting Officer is not required on information only submittals. The Contracting Officer will mark "receipt acknowledged" on submittals for information only and will return only the transmittal cover sheet to the Contractor. Normally, submittals for information only will not be returned. However, the Government reserves the right to return unsatisfactory submittals and require the Contractor to resubmit any item found not to comply with the contract. This does not relieve the Contractor from the obligation to furnish material conforming to the plans and specifications; will not prevent the Contracting Officer from requiring removal and replacement of nonconforming material incorporated in the work; and does not relieve the Contractor of the requirement to furnish samples for testing by the Government laboratory or for check testing by the Government in those instances where the technical specifications so prescribe.

## 1.8 PROJECT SUBMITTAL REGISTER

A sample project Submittal Register showing items of equipment and materials for when submittals are required by the specifications is provided as Appendix A to this specification.

### 1.8.1 Submittal Management

Prepare and maintain the Submittal Register as the work progresses. Do not change data that is output in columns (c), (d), (e), and (f) as delivered by the Government; retain data that is output in columns (a), (g), (h), and (i) as approved. As an attachment, provide a Submittal Register showing items of equipment and materials for which submittals are required by the specifications. This list may not be all-inclusive and additional submittals may be required.

Column (c): Lists specification section in which submittal is required.

Column (d): Lists each submittal description (SD Number. and type, e.g., SD-02 Shop Drawings) required in each specification section.

Column (e): Lists one principal paragraph in each specification section where a material or product is specified. This listing is only to facilitate locating submitted requirements. Do not consider entries in column (e) as limiting the project requirements.

Column (f): Lists the approving authority for each submittal.

Thereafter, the Contractor is to track all submittals by maintaining a complete list, including completion of all data columns and all dates on which submittals are received by and returned by the Government.

### 1.8.2 Preconstruction Use of Submittal Register

Submit the Submittal Register no later than at the Preconstruction Meeting. Verify that all submittals required for the project are listed and add missing submittals. Coordinate and complete the following fields on the register:

Column (a) Activity Number: Activity number from the project schedule.

Column (g) Contractor Submit Date: Scheduled date for the approving authority to receive submittals.

Column (h) Contractor Approval Date: Date that Contractor needs approval of submittal.

Column (i) Contractor Material: Date that Contractor needs material delivered to Contractor control.

#### 1.8.3 Contractor Use of Submittal Register

Update the following fields with each submittal throughout the contract.

Column (b) Transmittal Number: List of consecutive, Contractor-assigned numbers.

Column (j) Action Code (k): Date of action used to record Contractor's review when forwarding submittals to QC.

Column (l) Date submittal transmitted.

Column (q) Date approval was received.

#### 1.8.4 Approving Authority Use of Submittal Register

Update the following fields:

Column (b) Transmittal Number: List of consecutive, Contractor-assigned numbers.

Column (l) Date submittal was received.

Column (m) through (p) Dates of review actions.

Column (q) Date of return to Contractor.

#### 1.8.5 Action Codes

##### 1.8.5.1 Government Review Action Codes

"A" - "Approved as submitted"

"AN" - "Approved as noted"

"RR" - "Disapproved as submitted"; "Completed"

"NR" - "Not Reviewed"

"RA" - "Receipt Acknowledged"

#### 1.8.6 Delivery of Copies

Submit an updated electronic copy of the Submittal Register to the Contracting Officer with each invoice request. Provide an updated Submittal Register monthly regardless of whether an invoice is submitted.

## 1.9 VARIATIONS

Variations from contract requirements require Contracting Officer approval pursuant to contract Clause FAR 52.236-21 Specifications and Drawings for Construction, and will be considered where advantageous to the Government.

### 1.9.1 Considering Variations

Discussion of variations with the Contracting Officer before submission will help ensure that functional and quality requirements are met and may minimize rejections and resubmittals. For variations that include design changes or some material or product substitutions, the Government may require an evaluation and analysis by a licensed professional engineer hired by the contractor.

Specifically point out variations from contract requirements in a transmittal letter. Failure to point out variations may cause the Government to require rejection and removal of such work at no additional cost to the Government.

### 1.9.2 Warranting that Variations are Compatible

When delivering a variation for approval, the Contractor warrants that this contract has been reviewed to establish that the variation, if incorporated, will be compatible with other elements of work.

### 1.9.3 Review Schedule Extension

In addition to the normal submittal review period, a period of 7 calendar days will be allowed for the Government to consider submittals with variations.

## 1.10 SCHEDULING

Contracting Officer review will be completed within 21 calendar days from the date of submission, except as specified otherwise.

Schedule and submit concurrently product data and shop drawings covering component items forming a system or items that are interrelated. Submit pertinent certifications at the same time. No delay damages or time extensions will be allowed for time lost in late submittals. Allow an additional 21 calendar days for review and approval of submittals for HVAC control systems.

- a. Coordinate scheduling, sequencing, preparing, and processing of submittals with performance of work so that work will not be delayed by submittal processing. The Contractor is responsible for additional time required for Government reviews resulting from required resubmittals. The review period for each resubmittal is the same as for the initial submittal.
- b. Submittals required by the contract documents are listed on the Submittal Register. If a submittal is listed in the Submittal Register but does not pertain to the contract work, the Contractor is to include the submittal in the register and annotate it "N/A" with a brief explanation. Approval by the Contracting Officer does not relieve the Contractor of supplying submittals required by the contract documents but that have been omitted from the register or marked "N/A."

- c. Resubmit the Submittal Register and annotate it monthly with actual submission and approval dates. When all items on the register have been fully approved, no further resubmittal of the Submittal Register is required.
- d. Except as specified otherwise, allow a review period, beginning with receipt by the approving authority, that includes at least 14 calendar days for submittals for QC manager approval and 21 calendar days for submittals where the Contracting Officer is the approving authority. The period of review for submittals with Contracting Officer approval begins when the Government receives the submittal from the QC organization.
- e. For submittals requiring review by a Government fire protection engineer, allow a review period, beginning when the Government receives the submittal from the QC organization, of 30 calendar days for return of the submittal to the Contractor.

#### 1.10.1 Reviewing, Certifying, and Approving Authority

The QC Manager is responsible for reviewing all submittals and certifying that they are in compliance with contract requirements. The approving authority on submittals is the QC Manager unless otherwise specified. At each "Submittal" paragraph in individual specification sections, a notation "G" following a submittal item indicates that the Contracting Officer is the approving authority for that submittal item. Provide an additional copy of the submittal to the Government Approving authority, per the requirements of paragraph FORWARDING SUBMITTALS REQUIRING GOVERNMENT APPROVAL.

#### 1.10.2 Constraints

Conform to provisions of this section, unless explicitly stated otherwise for submittals listed or specified in this contract.

Submit complete submittals for each definable feature of the work. At the same time, submit components of definable features that are interrelated as a system.

When acceptability of a submittal is dependent on conditions, items, or materials included in separate subsequent submittals, the submittal will be returned without review.

Approval of a separate material, product, or component does not imply approval of the assembly in which the item functions.

#### 1.10.3 QC Organization Responsibilities

- a. Review submittals for conformance with project design concepts and compliance with contract documents.
- b. Process submittals based on the approving authority indicated in the Submittal Register.
  - (1) When the QC manager is the approving authority, take appropriate action on the submittal from the possible actions defined in paragraph APPROVED SUBMITTALS.

(2) When the Contracting Officer is the approving authority or when variation has been proposed, forward the submittal to the Government, along with a certifying statement, or return the submittal marked "not reviewed" or "revise and resubmit" as appropriate. The QC organization's review of the submittal determines the appropriate action.

c. Ensure that material is clearly legible.

d. Stamp each sheet of each submittal with a QC certifying statement or an approving statement, except that data submitted in a bound volume or on one sheet printed on two sides may be stamped on the front of the first sheet only.

(1) When the approving authority is the Contracting Officer, the QC organization will certify submittals forwarded to the Contracting Officer with the following certifying statement:

"I hereby certify that the (equipment) (material) (article) shown and marked in this submittal is that proposed to be incorporated with Contract Number \_\_\_\_\_ is in compliance with the contract drawings and specification, can be installed in the allocated spaces, and is submitted for Government approval.

Certified by Submittal Reviewer \_\_\_\_\_, Date \_\_\_\_\_  
(Signature when applicable)

Certified by QC Manager \_\_\_\_\_, Date \_\_\_\_\_"  
(Signature)

(2) When approving authority is the QC manager, the QC manager will use the following approval statement when returning submittals to the Contractor as "Approved" or "Approved as Noted."

"I hereby certify that the (material) (equipment) (article) shown and marked in this submittal and proposed to be incorporated with Contract Number \_\_\_\_\_ is in compliance with the contract drawings and specification, can be installed in the allocated spaces, and is approved for use.

Certified by Submittal Reviewer \_\_\_\_\_, Date \_\_\_\_\_  
(Signature when applicable)

Approved by QC Manager \_\_\_\_\_, Date \_\_\_\_\_"  
(Signature)

e. Sign the certifying statement or approval statement. The QC organization member designated in the approved QC plan is the person signing certifying statements. The use of original ink for signatures is required. Stamped signatures are not acceptable.

f. Update the Submittal Register as submittal actions occur, and maintain the submittal register at the project site until final acceptance of all work by the Contracting Officer.

g. Retain a copy of approved submittals and approved samples at the project site.

h. For "S" submittals, provide a copy of the approved submittal to the

Government Approving authority.

#### 1.11 GOVERNMENT APPROVING AUTHORITY

When the approving authority is the Contracting Officer, the Government will:

- a. Note the date on which the submittal was received from the QC manager.
- b. Review submittals for approval within the scheduling period specified in paragraph SCHEDULING and only for conformance with project design concepts and compliance with contract documents.
- c. Identify returned submittals with one of the actions defined in paragraph REVIEW NOTATIONS and with comments and markings appropriate for the action indicated.

Upon completion of review of submittals requiring Government approval, stamp and date submittals. One copy of the submittal will be retained by the Contracting Officer and one copy of the submittal will be returned to the Contractor.

##### 1.11.1 Review Notations

Submittals will be returned to the Contractor with the following notations:

- a. Submittals marked "approved" or "accepted" authorize proceeding with the work covered.
- b. Submittals marked "approved as noted" or "approved, except as noted, resubmittal not required," authorize proceeding with the work covered provided that the Contractor takes no exception to the corrections.
- c. Submittals marked "not approved," "disapproved," or "revise and resubmit" indicate incomplete submittal or noncompliance with the contract requirements or design concept. Resubmit with appropriate changes. Do not proceed with work for this item until the resubmittal is approved.
- d. Submittals marked "not reviewed" indicate that the submittal has been previously reviewed and approved, is not required, does not have evidence of being reviewed and approved by Contractor, or is not complete. A submittal marked "not reviewed" will be returned with an explanation of the reason it is not reviewed. Resubmit submittals returned for lack of review by Contractor or for being incomplete, with appropriate action, coordination, or change.
- e. Submittals marked "receipt acknowledged" indicate that submittals have been received by the Government. This applies only to "information-only submittals" as previously defined.

#### 1.12 DISAPPROVED SUBMITTALS

Make corrections required by the Contracting Officer. If the Contractor considers any correction or notation on the returned submittals to constitute a change to the contract drawings or specifications, give notice to the Contracting Officer as required under the FAR clause titled CHANGES. The Contractor is responsible for the dimensions and design of connection details and the construction of work. Failure to point out

variations may cause the Government to require rejection and removal of such work at the Contractor's expense.

If changes are necessary to submittals, make such revisions and resubmit in accordance with the procedures above. No item of work requiring a submittal change is to be accomplished until the changed submittals are approved.

All revisions made to a previous submittal shall be clouded and specifically indicated in the transmittal to clearly delineate and identify what has changed. The Government has the right to reject revised submittals that do not cloud or delineate changes from previous submittals.

#### 1.13 APPROVED SUBMITTALS

The Contracting Officer's approval of submittals is not to be construed as a complete check, and indicates only that the general method of construction, materials, detailing, and other information are satisfactory.

Approval or acceptance by the Government for a submittal does not relieve the Contractor of the responsibility for meeting the contract requirements or for any error that may exist, because under the Quality Control (QC) requirements of this contract, the Contractor is responsible for ensuring information contained within each submittal accurately conforms with the requirements of the contract documents.

After submittals have been approved or accepted by the Contracting Officer, no resubmittal for the purpose of substituting materials or equipment will be considered unless accompanied by an explanation of why a substitution is necessary.

#### 1.14 APPROVED SAMPLES

Approval of a sample is only for the characteristics or use named in such approval and is not be construed to change or modify any contract requirements. Before submitting samples, provide assurance that the materials or equipment will be available in quantities required in the project. No change or substitution will be permitted after a sample has been approved.

Match the approved samples for materials and equipment incorporated in the work. If requested, approved samples, including those that may be damaged in testing, will be returned to the Contractor, at its expense, upon completion of the contract. Unapproved samples will also be returned to the Contractor at its expense, if so requested.

Failure of any materials to pass the specified tests will be sufficient cause for refusal to consider, under this contract, any further samples of the same brand or make as that material. The Government reserves the right to disapprove any material or equipment that has previously proved unsatisfactory in service.

Samples of various materials or equipment delivered on the site or in place may be taken by the Contracting Officer for testing. Samples failing to meet contract requirements will automatically void previous approvals. Replace such materials or equipment to meet contract requirements.

CONTRACTOR

[illegible]

SECTION 01 33 10  
SUBSTITUTIONS  
02/24

PART 1 GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 GENERAL

A general description for each piece of equipment, material and component scheduled on the drawings and described in the specifications include the salient physical, functional, or performance characteristics of the brand name item that an "equal" item must meet to be acceptable for award. The use of brand name manufactures and model number is utilized as the basis of design are utilized in the preparation of the project documents. "Or equals" are acceptable when the salient characteristics of the scheduled or specified equipment, component or device, which are firm requirements, are met without exception.

1.2.1 References

1.2.1.1 FAR 11.104

FAR 11.104 only refers to "or equal" substitutions to the basis of design listed on the schedule or described in the specifications.

Use of Brand Name or Equal Purchase Descriptions:

- a. While the use of performance specifications is preferred to encourage offerers to propose innovative solutions, the use of brand name or equal purchase descriptions may be advantageous under certain circumstances.
- b. Brand name or equal purchase descriptions must include, in addition to the brand name, a general description of those salient physical, functional, or performance characteristics of the brand name item that an "equal" item must meet to be acceptable for award. Use brand name or equal descriptions when the salient characteristics are firm requirements.
- c. Note: a Justification and Approval (J&A) document is NOT required.

1.2.1.2 FAR 11.105

FAR 11.105 is not intended to be used for proprietary or Items Peculiar to One Manufacturer. (Indicated for Reference Only)

Items Peculiar to One Manufacturer: Agency requirements shall not be written so as to require a particular brand name, product, or a feature of a product, peculiar to one manufacturer, thereby precluding consideration of a product manufactured by another company, unless:

- a. The particular brand name, product, or feature is essential to the

Government's requirements, and market research indicates other companies' similar products, or products lacking the particular feature, do not meet, or cannot be modified to meet, the agency's minimum needs;

- i. The authority to contract without providing for full and open competition is supported by the required justifications and approvals (see 6.302-1); or
  - ii. The basis for not providing for maximum practicable competition is documented in the file (see 13.106-1(b)) or justified (see 13.501) when the acquisition is awarded using simplified acquisition procedures.
- b. The documentation or justification is posted for acquisitions over \$ 25,000. (See 5.102(a)(6).)
- iii. (b) For multiple award schedule orders, see 8.405-6.
- c. Note: a Justification and Approval (J&A) document is IS required.

### 1.3 SUMMARY

Section includes administrative and procedural requirements for substitutions.

### 1.4 DEFINITIONS

Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

#### 1.4.1 Substitutions for Cause

Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.

#### 1.4.2 Substitutions for Convenience

Changes proposed by Contractor or contracting officer that are not required in order to meet other Project requirements but may offer an advantage to Contractor or contracting officer.

#### 1.4.3 Procurement Substitution Requests

Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Procurement and Contracting Documents, submitted prior to receipt of bids.

#### 1.4.4 Substitution Requests

Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Contract Documents, submitted following Contract award.

### 1.5 QUALITY ASSURANCE

Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by

manufacturers.

## 1.6 PROCUREMENT SUBSTITUTIONS

### 1.6.1 General

By submitting a bid, the Bidder represents that its bid is based on materials and equipment described in the Procurement and Contracting Documents, including Addenda. Bidders are encouraged to request approval of qualifying substitute materials and equipment when the Specifications Sections list materials and equipment by product or manufacturer name.

### 1.6.2 Requests

Requests will be received and considered by the contracting officer when the following conditions are satisfied, as determined by Architect; otherwise requests will be returned without action:

- a. Extensive revisions to the Contract Documents are not required.
- b. Proposed changes are in keeping with the general intent of the Contract Documents, including the level of quality of the Work represented by the requirements therein.
- c. The request is fully documented and properly submitted.

### 1.6.3 Requirements

The requested substitution for convenience (not for cause) needs to meet the following requirements:

- a. Substitutions for convenience which provide benefit solely to the contractors shall be at the contractors risk & cost.
- b. Be of the same efficiency and not require additional energy cost to operate the equipment, systems and associated components. The substitution cannot decrease the energy use of the proposed substitution item, but increase the energy of other systems.
- c. Be of roughly the same dimensions, weight, physical size, electrical characteristics, construction, etc. as the basis of design listed in the specifications and identified on the drawing schedules.
- d. The performance of the proposed substitution must be equal to or greater than the basis of design listed in the specifications and identified on the drawing schedules.
- e. The general contractor shall be responsible for all the additional costs of design, engineering, construction, project management, etc., to design, provide, furnish & install the proposed substitution over and above the cost related to the basis of design listed in the specifications and identified on the drawing schedules.
- f. The subcontractor shall coordinate with the general contractor and any other associated subcontractors to address any costs related to the proposed substitution.
- g. Note: there may be conditions or circumstances such as existing buildings, mechanical rooms or confined or limited architectural

spaces and areas where in the event the proposed substitution will not be acceptable as an option to the basis of design listed in the specifications and identified on the drawing schedules.

## 1.7 SUBMITTALS

### Procurement Substitution Request; G

Submit documentation identifying product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

Submit to Construction Manager for the Project. A procurement Substitution Request must be made in writing in compliance with the following requirements:

#### 1.7.1 Requests

Request for substitution of equipment, component and devices may be submitted by each contractor after contract award as part of the submittal process for review and comment by the Architect or Engineer of the project. Request for substitutions for Proprietary Items shall only be accepted if the listed product is no longer available or cannot be procured during the project construction schedule.

The final determination of if the substitution is acceptable is by the Contracting Officer's Representative and by the Designer of Record. All reviews of substitution requests shall be based upon the requirements in this section in terms of the substituted products performance, efficiency and fit within the constraints of the project. The burden is on the contractor to confirm these features and coordinate the product within the physical constraints of the project. The decision shall be final.

#### 1.7.2 Submittal Format

Submit electronically, copies of each written Procurement Substitution Request using the Substitution Request Form, an attachment to this section.

Identify the product or the fabrication or installation method to be replaced in each request. Include related Specifications Sections and drawing numbers. Provide complete documentation on both the product specified and the proposed substitute, including the following information as appropriate:

Point-by-point comparison of specified and proposed substitute product data, fabrication drawings, and installation procedures.

Copies of current, independent third-party test data of salient product or system characteristics.

Samples where applicable or when requested by Architect.

Detailed comparison of significant qualities of the proposed substitute with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.

Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.

Research reports, where applicable, evidencing compliance with building code in effect for Project.

Coordination information, including a list of changes or modifications needed to other parts of the Work which will become necessary to accommodate the proposed substitute. Cost associated with such changes or modifications will be the responsibility of the Contractor.

- a. Provide certification by manufacturer that the substitute proposed is equal to or superior to that required by the Procurement and Contracting Documents, and that its in-place performance will be equal to or superior to the product or equipment specified in the application indicated.
- b. Bidder, in submitting the Procurement Substitution Request, waives the right to additional payment or an extension of Contract Time because of the failure of the substitute to perform as represented in the Procurement Substitution Request.

#### Substitution Requests; G

Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number, title, and Drawing numbers and titles.

1. Substitution Request Form: See attachment to this section.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
  - a. Statement indicating why specified product, fabrication or installation could not be provided, if applicable.
  - b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by contracting officer and separate contractors that will be necessary to accommodate proposed substitution.
  - c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
  - d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
  - e. Samples, where applicable or requested.
  - f. Certificates and qualification data, where applicable or requested.
  - g. List of similar installations for completed projects with project names and addresses and names and addresses of architects.

- h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
- i. Research reports evidencing compliance with building code in effect for Project.
- j. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
- k. Cost information, including a proposal of change, if any, in the Contract Sum.
- l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
- m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

#### 1.7.3 Architect's Action

Architect may request additional information or documentation necessary for evaluation of the Procurement Substitution Request. Architect will notify all bidders of acceptance of the proposed substitute by means of an Addendum to the Procurement and Contracting Documents.

#### 1.7.4 Architect, Engineer or Construction Manager's Action

If necessary, there will be a request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Notification will be provided to Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.

- a. Forms of Acceptance: =Architect's Supplemental Instructions for minor changes in the Work.
- b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

#### 1.7.5 Conditions

The Design Professional will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, the Design Professional will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution offers the government a substantial advantage in cost, time, energy conservation, or other considerations, after

deducting additional responsibilities the government must assume. Contractor's additional responsibilities may include compensation to Architect & Engineer for redesign and evaluation services, increased cost of other construction by the government, and similar considerations.

- b. Requested substitution does not require any revisions to the Contract Documents.
- c. Requested substitution is consistent with the Contract Documents.
- d. Requested substitution will not adversely affect project cost.
- e. Requested substitution will not adversely affect Contractor's construction schedule.
- f. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- g. Requested substitution will provide the specified warranty.
- h. Substitution request is fully documented and properly submitted.
- i. Requested substitution has received necessary approvals of authorities having jurisdiction.
- j. Requested substitution is compatible with other portions of the Work.
- k. Requested substitution has been coordinated with other portions of the Work.
- l. Requested substitution provides specified warranty.
- m. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

#### 1.7.6 Approval

Architect, Engineer or Construction Manager's approval of a substitute during bidding does not relieve Contractor of the responsibility to submit required shop drawings and to comply with all other requirements of the Contract Documents.

#### 1.8 QUALITY ASSURANCE

Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

#### 1.9 PROCEDURES

Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

## PART 2 PRODUCTS

### 2.1 SUBSTITUTIONS

#### 2.1.1 Substitutions for Cause

Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

Conditions: Architect, Engineer or Construction Manager will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- b. Substitution request is fully documented and properly submitted.
- c. Requested substitution will not adversely affect Contractor's construction schedule.
- d. Requested substitution has received necessary approvals of authorities. having jurisdiction.
- e. Requested substitution is compatible with other portions of the Work.
- f. Requested substitution has been coordinated with other portions of the Work.
- g. Requested substitution provides specified warranty.
- h. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

#### 2.1.2 Substitutions for Convenience

Architect, Engineer or Construction Manager will consider requests for substitution if received within 30 days after the Notice of Award. Requests received after that time may be considered or rejected at discretion of Architect, Engineer or Construction Manager.

Architect, Engineer or Construction Manager will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution offers the government a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by the government, and similar considerations.
- b. Requested substitution does not require extensive revisions to the

Contract Documents.

- c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
- d. Substitution request is fully documented and properly submitted.
- e. Requested substitution will not adversely affect Contractor's construction schedule.
- f. Requested substitution has received necessary approvals of authorities having jurisdiction.
- g. Requested substitution is compatible with other portions of the Work.
- h. Requested substitution has been coordinated with other portions of the Work.
- i. Requested substitution provides specified warranty.
- j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 3 EXECUTION - NOT USED

## SUBSTITUTION REQUEST COVER SHEET

This cover sheet is required for all proposed substitutions including "or equals".

Contractor: \_\_\_\_\_

Subcontractor: \_\_\_\_\_

This Request Reference Number : \_\_\_\_\_

Substitution Summary: \_\_\_\_\_

Specification Section and Paragraph Number: \_\_\_\_\_

Contract Drawing and Detail Reference: \_\_\_\_\_

Date of This Request: \_\_\_\_\_

This Request Prepared By: \_\_\_\_\_

Conditions: Indicate all conditions that apply to this proposed substitution:

- ☐ Substitution required because specified item is no longer available.
- ☐ Substitution required because Contractor believes specified item is incorrect, inappropriate, or incompatible.
- ☐ Substitution recommended because it offers the Owner substantial advantage in:
  - ☐ Quality
  - ☐ Time
  - ☐ Cost
  - ☐ This is an "or equal".

Evidence: Indicate evidence attached:

- ☐ Tabulated side by side comparison of specified item and proposed substitution directly comparing each feature, characteristic, and performance.
- ☐ Manufacturer's product data for both specified item and proposed substitution. Origin of all information included on tabulated side by side comparison is highlighted.
- ☐ Details showing how the proposed substitution interfaces with adjacent work.
- ☐ Certification that warranty, if any required, will be provided as required.
- ☐ Certification that this proposed substitution is coordinated with all related and adjacent work.
- ☐ Complete cost change information.
- ☐ Higher cost to Owner as stated in cost change information
- ☐ No change in cost to Owner
- ☐ Lower cost to Owner, credit to Owner as stated in cost change information

Deviations from Contract Documents: Itemize all deviations from Contract Documents if this proposed substitution is approved.

---

---

---

---

---

---

The undersigned attests that the undersigned has carefully examined this entire submission and that the requirements of the Contract Documents have been met.

Should this alternate material or equipment fail to meet the expectations of the owner within the mandated design liability period, this contractor shall replace the material and or equipment with the original specified items at no additional cost to the owner. This Subcontractor shall be responsible for all collateral impacts to the project for replacement of such deviations and substitutions.

The attachments are included at the end of this Section. If the attachments are missing, notify the Contracting Officer.

## 1.2 DEFINITIONS

The following definitions are for the convenience of the reader. If there is a referenced document in the text of this specification section, that is the document that should define terms for that paragraph. If further clarification is needed, contact the Contracting Officer.

### 1.2.1 Site Safety and Health Officer (SSHO)

A Contractor Employee that is responsible for overseeing and ensuring implementation of the prime Contractor's Safety and Occupational Health (SOH) program according to the Contract, EM 385-1-1, applicable federal, state, and local requirements.

#### 1.2.1.1 Level One SSHO

A designated employee with full-time SOH responsibility that meets and follows the requirements of EM 385-1-1.

#### 1.2.1.2 Level Two SSHO

A designated employee with Level Two SSHO responsibility that meets and follows the requirements of EM 385-1-1. Level Two SSHOs cannot be assigned to projects that have a residual Risk Assessment Code (RAC) of high or extremely high.

#### 1.2.1.3 Level Three SSHO

A designated Qualified Person or Competent Person with SOH responsibility that meets and follows the requirements of EM 385-1-1. Level 3 SSHOs cannot be assigned to projects that have a residual RAC of high or extremely high.

#### 1.2.1.4 Alternate SSHO

An employee that meets the definition of the contract-required level SSHO, but is not the primary SSHO.

### 1.2.2 Competent Person (CP)

The CP is a person designated in writing, who, through training, knowledge, and experience, is capable of identifying, evaluating, and addressing existing and predictable hazards in the working environment or working conditions that are unsanitary, hazardous, or dangerous to personnel, and who has authorization to take prompt corrective measures to eliminate them.

### 1.2.3 Qualified Person (QP)

The QP is a person designated in writing, who, by possession of a recognized degree, certificate, or professional standing, or extensive knowledge, training, and experience, has successfully demonstrated their ability to solve or resolve problems related to the subject matter, the work, or the project.

### 1.3 SUBMITTALS

Government Acceptance or Approval does not remove responsibility from the Contractor and subcontractors for their actions or liability.

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

#### SD-01 Preconstruction Submittals

Accident Prevention Plan; G

Indoor Air Quality (IAQ) Management Plan; G

#### SD-06 Test Reports

Monthly Exposure Reports; G

Accident Reports; G

LHE Inspection Reports; G

#### SD-07 Certificates

Contractor Safety Self-Evaluation Checklist; G

Standard Lift Plan; G

Critical Lift Plan; G

Activity Hazard Analysis (AHA); G

Hot Work Permit; G

Certificate of Compliance; G

### 1.4 PUBLIC HEALTH EMERGENCIES

In the event of a declared public health emergency, follow safety precautions as required by the Occupational Safety and Health Administration (OSHA) [www.osha.gov](http://www.osha.gov), the Centers for Disease Control and Prevention (CDC) [www.cdc.gov](http://www.cdc.gov), and as required by federal, state and local requirements.

### 1.5 MONTHLY EXPOSURE REPORTS

Provide a Monthly Exposure Report by the fifth of each month. This report is a compilation of employee-hours worked each month for all site workers, both Prime and subcontractor. Failure to submit the report may result in rejection of the progress payment.

## 1.6 CONTRACTOR SAFETY SELF-EVALUATION CHECKLIST

The Contractor must complete the Contractor Safety Self-Evaluation Checklist monthly and submit with each request for payment voucher. This submission is required monthly even when a payment voucher is not requested. An acceptable score of 90 or greater is required. Failure to submit the completed safety self-evaluation checklist or achieve a score of at least 90 may result in rejection of the voucher. The Contractor Safety Self-Evaluation Checklist can be found on the Whole Building Design Guide website at <https://www.wbdg.org/dod/ufgs/ufgs-forms-graphics-tables>

## 1.7 REGULATORY REQUIREMENTS

In addition to the detailed requirements included in the provisions of this Contract, comply with the most recent edition of USACE EM 385-1-1, and applicable Federal, State, and local laws, ordinances, criteria, rules, and regulations at the date of the Solicitation for this Contract. Submit matters of interpretation of standards to the appropriate administrative agency for resolution before starting work. Where the requirements of this specification, applicable laws, criteria, ordinances, regulations, and referenced documents vary, the most stringent requirements govern.

### 1.7.1 Subcontractor Safety Requirements

For this Contract, neither Contractor nor any Subcontractor may enter into Contract with any Subcontractor that fails to meet the following requirements. The term Subcontractor in this and the following paragraphs means any entity holding a Contract with the Contractor or with a Subcontractor at any tier.

#### 1.7.1.1 Experience Modification Rate (EMR)

Subcontractors on this Contract must have an effective EMR less than or equal to 1.10, as computed by the National Council on Compensation Insurance (NCCI) or if not available, as computed by the state agency's rating bureau in the state where the Subcontractor is registered, when entering into a subcontract agreement with the Prime Contractor or a Subcontractor at any tier. The Prime Contractor may submit a written request for additional consideration to the Contracting Officer where the specified acceptable EMR range cannot be achieved. Relaxation of the EMR range will only be considered for approval on a case-by-case basis for special conditions and must not be anticipated as tacit approval. Contractor's Site Safety and Health Officer (SSHO) must collect and maintain the certified EMR ratings for all subcontractors on the project and make them available to the Government at the Government's request.

#### 1.7.1.2 OSHA Days Away from Work, Restricted Duty, or Job Transfer (DART) Rate

Subcontractors on this Contract must have a DART rate, calculated from the most recent, complete calendar year, less than or equal to 3.4 when entering into a subcontract agreement with the Prime Contractor or a Subcontractor at any tier. The OSHA Dart Rate is calculated using the following formula:

$$(N/EH) \times 200,000$$

Where:

N = number of injuries and illnesses with days away, restricted work, or job transfer

EH = total hours worked by all employees during most recent, complete calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year)

The Prime Contractor may submit a written request for additional consideration to the Contracting Officer where the specified acceptable OSHA Dart rate range cannot be achieved for a particular subcontractor. Relaxation of the OSHA DART rate range will only be considered for approval on a case-by-case basis for special conditions and must not be anticipated as tacit approval. Contractor's Site Safety and Health Officer (SSHO) must collect and maintain self-certified OSHA DART rates for all subcontractors on the project and make them available to the Government at the Government's request.

## 1.8 SITE QUALIFICATIONS, DUTIES, AND MEETINGS

### 1.8.1 Site Safety and Health Officer (SSHO)

#### 1.8.1.1 Qualifications of SSHO

All SSHOs will have met the training, experience requirements identified in the EM 385-1-1 and this Contract.

#### 1.8.1.2 Duties of SSHO

All SSHOs will carry out the roles and responsibilities as identified in this Contract and the EM 385-1-1. All SSHOs must be designated on an ENG Form 6282, provided by the Contracting Officer. SSHO(s) are subject to dismissal if their required duties are not being effectively carried out. If the SSHO is dismissed, project work will be stopped and will not be allowed to resume until a suitable replacement is approved and the above duties are again being effectively carried out.

#### 1.8.1.3 Safety Meetings

The SSHO must conduct safety meetings to review past activities, plan for new or changed operations, review pertinent aspects of appropriate AHA (by trade), establish safe working procedures for anticipated hazards, and provide pertinent Safety and Occupational Health (SOH) training and motivation. The SSHO must conduct meetings at least once a month for all supervisors at the project location. The SSHO, supervisors, or foremen must conduct meetings at least once a week for the trade workers. Document meeting minutes to include the date, persons in attendance, subjects discussed, and names of individual(s) who conducted the meeting. Maintain documentation on-site and furnish copies to the Contracting Officer on request. Notify the Contracting Officer of all scheduled meetings 7 calendar days in advance.

### 1.8.2 Roles and Responsibilities of Prime Contractor and SSHO

The Prime Contractor and SSHO must ensure that the requirements of all applicable OSHA and EM 385-1-1 are met for the project. The Prime

Contractor must ensure an SSHO or an equally qualified Alternate SSHO(s) is at the worksite at all times to implement and administer the Contractor's safety program and Government accepted Accident Prevention Plan. If the required SSHO has to temporarily (that is, up to 24 hours / 1 day) leave the site of work due to unforeseen or emergency situations, a Level One, Two, or Three SSHO may be used in the interim and must be on the site of work at all times when work is being performed.

If the SSHO must be off-site for a period longer than 24 hours / 1 day, a qualified alternate that meets the contract requirements must be onsite.

a. Prime contractor must ensure all SSHOs:

- (1) Are designated on an ENG Form 6282.
- (2) Meet minimum training and experience requirements identified in EM 385-1-1.
- (3) Execute roles and responsibilities identified in EM 385-1-1.

#### 1.8.3 Additional Requirements

The SSHO must not serve as the Quality Control Manager. The SSHO must not serve as the Superintendent.

The SSHO must be a direct employee of the Prime Contractor, not an employee of a subcontractor.

#### 1.8.4 Competent Person for Confined Space Entry

Provide a Confined Space Competent Person (CP) who meets the requirements of EM 385-1-1 and herein. The CP for Confined Space Entry must supervise the entry into each confined space in accordance with EM 385-1-1.

Since this work involves operations that handle combustible or hazardous materials, this person must have the ability to understand and follow through on the air sampling, Personal Protective Equipment (PPE), and instructions of a Marine Chemist, Coast Guard authorized persons, or Certified Industrial Hygienist. Confined space and enclosed space work must comply with NFPA 306, 29 CFR 1915, "Confined and Enclosed Spaces and Other Dangerous Atmospheres in Shipyard Employment," or as applicable in 29 CFR 1910 for general industry, 29 CFR 1926 for construction.

#### 1.8.5 Qualified Trainer Requirements

Individuals qualified to instruct the 40 hour Contract safety awareness course, or portions thereof, must meet the definition of a Competent Person Trainer as defined in the EM 385-1-1, and, at a minimum, possess a working knowledge of the following subject areas: EM 385-1-1, Electrical Standards, Lockout/Tagout, Fall Protection, Confined Space Entry for Construction, Excavation, Trenching and Soil Mechanics, and Scaffolds in accordance with 29 CFR 1926.

Instructors are required to:

- a. Prepare class presentations that cover construction-related safety requirements.
- b. Ensure that all attendees attend all sessions by using a class roster

signed daily by each attendee. Maintain copies of the roster for at least five (5) years. This is a certification class and must be attended 100 percent. In cases of emergency where an attendee cannot make it to a session, the attendee can make it up in another class session for the same subject.

- c. Update training course materials whenever an update of the EM 385-1-1 becomes available.
- d. Provide a written exam of at least 50 questions. Students are required to answer 80 percent correctly to pass.
- e. Request, review, and incorporate student feedback into a continuous course improvement program.

#### 1.8.6 Preconstruction Meeting

For additional information on the Preconstruction Meeting, refer to Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME).

- a. Contractor representatives who have a responsibility or significant role in accident prevention on the project must attend the Preconstruction Meeting. This includes the Project Superintendent, Site Safety and Occupational Health Officer, Quality Control Manager, and any other assigned safety and health professionals who participated in the development of the APP (including the Activity Hazard Analyses (AHAs) and special plans, program, and procedures associated with it).
- b. During the Preconstruction Meeting, discuss the details of the submitted APP to include incorporated plans, programs, procedures, and a listing of anticipated AHAs that will be developed and implemented during the performance of the Contract. This list of proposed AHAs will be reviewed and an agreement will be reached between the Contractor and the Contracting Officer as to which phases will require an analysis. In addition, establish a schedule for the preparation, submittal, and Government review of AHAs to preclude project delays. Refer to paragraph ACCIDENT PREVENTION PLAN (APP) for the required timeline for submission of the APP.

### 1.9 ACCIDENT PREVENTION PLAN

#### 1.9.1 Accident Prevention Plan

Submit the Accident Prevention Plan (APP) for review and acceptance by the Government within 15 days from receiving the Notice to Proceed. A Competent Person must prepare the written job-specific APP. Prepare the APP in accordance with the format and requirements of EM 385-1-1, Eng Form 6293, and herein. The APP must be job-specific and address any unusual or unique aspects of the project or activity for which it is written. The APP must interface with the Contractor's overall safety and health program referenced in the APP in the applicable APP element, and made site-specific. Describe the methods to evaluate past safety performance of potential subcontractors in the selection process. Also, describe innovative methods used to ensure and monitor safe work practices of subcontractors. The Government considers the Prime Contractor to be the "controlling employer" for all worksite safety and health of the subcontractors. Contractors are responsible for informing their subcontractors of the safety provisions under the terms of the Contract

and the penalties for noncompliance, coordinating the work to prevent one craft from interfering with or creating hazardous working conditions for other crafts, and inspecting subcontractor operations to ensure that accident prevention responsibilities are being carried out. The APP must be signed in accordance with the APP and ENG Form 6293 Accident Prevention Plan Worksheet. The SSHO(s) must provide and maintain the APP and a log of signatures by each subcontractor foreman, attesting that they have read and understand the APP, and make the APP and log available on-site to the Contracting Officer. If English is not the foreman's primary language, the Prime Contractor must provide an interpreter.

Deficiencies in the submitted APP, identified during the Government's review, must be corrected, and the APP re-submitted for review prior to the start of construction. Work is not permitted to begin until an APP is established that is acceptable to and fully approved by the Government. Once reviewed and accepted by the Contracting Officer, the APP and attachments will be enforced as part of the Contract. Disregarding the provisions of this Contract or the accepted APP is cause for stopping of work, at the discretion of the Contracting Officer, until the matter has been rectified. The Contractor shall continuously review and amend the APP, as necessary, throughout the life of the Contract. Changes to the accepted APP must be made with the knowledge and concurrence of the Contracting Officer, project superintendent, SSHO, and Quality Control Manager. Incorporate unusual or high-hazard activities not identified in the original APP as they are discovered. Should any severe hazard exposure (i.e. imminent danger) become evident, stop work in the area, secure the area, and develop a plan to remove the exposure and control the hazard. Notify the Contracting Officer within 24 hours of discovery. Eliminate and remove the hazard. In the interim, take all necessary action to restore and maintain safe working conditions in order to safeguard onsite personnel, visitors, the public (as defined by ANSI/ASSP A10.34), and the environment.

#### 1.9.2 Names and Qualifications

Provide plans in accordance with the requirements outlined in EM 385-1-1, including the following:

- a. Names and qualifications (resumes including education, training, experience, and certifications) of site safety and health personnel designated to perform work on this project to include the designated Site Safety and Health Officer(s) and other competent and qualified personnel to be used. Specify the duties of each position.
- b. As a minimum, designate and submit qualifications of Competent Persons (CP) for each of the following major areas: excavation; scaffolding; fall protection; hazardous energy; confined space; health hazard recognition, evaluation and control of chemical, physical and biological agents; and personal protective equipment and clothing to include selection, use and maintenance. Designate and submit qualifications for additional CPs as applicable to the work performed under this Contract.

#### 1.9.3 Plans

Provide plans in the APP in accordance with the requirements outlined in EM 385-1-1, including, but not limited to, the following:

#### 1.9.3.1 Standard Lift Plan (SLP)

Plan all lifts to avoid situations where the operator cannot maintain safe control of the lift. Prepare a written SLP in accordance with EM 385-1-1 for every lift or series of lifts (if duty cycle or routine lifts are being performed). The SLP must be developed, reviewed, and accepted by all personnel involved in the lift. Keep a copy of the SLP on the Load Handling Equipment (LHE) for the specific approved lift(s). Keep a copy of every SLP for a minimum of three months. Use the ENG Form 6203 (Crane Standard Lift Plan) from EM 385-1-1.

#### 1.9.3.2 Critical Lift Plan

Provide a Critical Lift Plan as required by EM 385-1-1. Before any critical lift, a CP or QP must prepare a Critical Lift Plan and submit it to the Contracting Officer or Contracting Officer's Representative for acceptance. Use the ENG Form 6213 (Load-Handling Equipment Crane Operation Critical Lift Plan) from EM 385-1-1.

#### 1.9.3.3 Fall Protection and Prevention Plan

Provide a Fall Protection and Prevention Plan as required by EM 385-1-1. A Fall Protection and Prevention Plan is required when employees are working at heights or exposed to fall hazards. The plan must be developed by a CP or QP and updated as conditions change, but at least annually.

#### 1.9.3.4 Excavation and Trenching Plan

Identify the safety and health aspects of excavation and provide and prepare the plan in accordance with EM 385-1-1 and Section 31 00 00.00 22 EARTHWORK.

#### 1.9.3.5 Lead, Cadmium, and Chromium Compliance Plan

Identify the safety and health aspects of work involving lead, cadmium, and chromium, and prepare in accordance with Section 02 83 00.00 22 MANAGEMENT OF LEAD, CADMIUM, AND CHROMIUM DURING RENOVATION, DEMOLITION, REMOVAL, AND ABATEMENT (PNS PROJECTS).

#### 1.9.3.6 Asbestos Hazard Abatement Plan

Identify the safety and health aspects of asbestos work, and prepare in accordance with Section 02 82 00.00 22 ASBESTOS REMEDIATION (PNS PROJECTS).

#### 1.9.3.7 Site Demolition Plan

Identify the safety and health aspects, and prepare in accordance with Section 02 41 00 DEMOLITION and referenced sources. Include engineering survey as applicable.

#### 1.10 ACTIVITY HAZARD ANALYSIS (AHA)

Before beginning each activity, task or Definable Feature of Work (DFOW) involving a type of work presenting hazards not experienced in previous project operations, or where a new work crew or subcontractor is to perform the work, the Contractor(s) performing that work activity must prepare an AHA. AHAs must be developed by the Prime Contractor, Subcontractor, or supplier performing the work, and provided for Prime Contractor review and approval before submitting to the Contracting

Officer. AHAs must be signed by the SSHO, Superintendent, QC Manager, and the subcontractor Foreman performing the work. Format the AHA in accordance with EM 385-1-1 or as directed by the Contracting Officer. Submit the AHA for review at least 15 working days prior to the start of each activity task, or DFO. The Government reserves the right to require the Contractor to revise and resubmit the AHA if it fails to effectively identify the work sequences, specific anticipated hazards, site conditions, equipment, materials, personnel, and the control measures to be implemented.

AHAs must identify competent persons required for phases involving high risk activities, including confined entry, crane and rigging, excavations, trenching, electrical work, fall protection, and scaffolding.

#### 1.10.1 AHA Management

Review the AHA list periodically (at least monthly) at the Contractor held Safety Meeting, and update as necessary when procedures, scheduling, or hazards change. Use the AHA during daily inspections by the SSHO to ensure the implementation and effectiveness of the required safety and health controls for that work activity.

#### 1.10.2 AHA Signature Log

Each employee performing work as part of an activity, task, or DFO must review the AHA for that work and sign a signature log specifically maintained for that AHA prior to starting work on that activity. The SSHO must maintain a signature log on site for every AHA. Provide employees whose primary language is other than English with an interpreter to ensure a clear understanding of the AHA and its contents.

#### 1.11 SITE SAFETY REFERENCE MATERIALS

Maintain safety-related references applicable to the project, including those listed in paragraph REFERENCES. Maintain applicable equipment manufacturer's manuals.

#### 1.12 EMERGENCY MEDICAL TREATMENT

Contractors must arrange for their own emergency medical treatment in accordance with EM 385-1-1. Government has no responsibility to provide emergency medical treatment.

#### 1.13 NOTIFICATIONS AND REPORTS

##### 1.13.1 Mishap Notification

Notify the Contracting Officer in accordance with the EM 385-1-1 Accident Reporting Timeline.

| Table<br>Accident Reporting Required Timeline |                  |                                                                        |
|-----------------------------------------------|------------------|------------------------------------------------------------------------|
| Accident Type                                 | Notify KO or COR | Complete Final Accident Report on<br>ENG 3394 and provide to KO or COR |
|                                               |                  |                                                                        |

| Table<br>Accident Reporting Required Timeline                                                  |                                          |               |
|------------------------------------------------------------------------------------------------|------------------------------------------|---------------|
| Fatality, in-patient hospitalization, amputation, eye loss, or property damage over \$600,000. | Immediately, no later than (NLT) 8 Hours | Within 7 Days |
| All other accidents and near misses                                                            | Immediately no later than (NLT) 24 Hours | Within 7 Days |

Within notification include Contractor name; Contract title; type of Contract; name of activity, installation or location where accident occurred; date and time of accident; names of personnel injured; extent of property damage, if any; extent of injury, if known, and brief description of accident (for example, type of construction equipment used and PPE used). Preserve the conditions and evidence on the accident site until the Government investigation team arrives on-site and Government investigation is conducted. Assist and cooperate fully with the Government's investigation(s) of any mishap.

#### 1.13.2 Accident Reports

- a. Conduct an accident investigation for recordable injuries and illnesses, property damage, and near misses as defined in EM 385-1-1, to establish the root cause(s) of the accident. Complete the applicable NAVFAC Contractor Significant Incident Report (CSIR), and electronically submit via the NAVFAC Enterprise Safety Applications Management System (ESAMS). Complete and submit an accident investigation report in ESAMS within 7 days for accidents as defined by EM 385-1-1. Complete the investigation report within 30 days. Accidents must include a written report submitted as an attachment in ESAMS using the following outline:

- (1) Summary description to include:

- (a) Process

- (b) Findings

- (c) Outcomes

- (2) Root Cause

- (3) Direct Factors

- (4) Indirect and Contributing Factors

- (5) Corrective Actions

- (6) Recommendations

All accidents are reportable, regardless of whether or not it is recordable.

- b. Near Misses: For Navy projects, complete the applicable documentation

in NAVFAC Contractor Incident Reporting System (CIRS), and electronically submit via the NAVFAC Enterprise Safety Applications Management System (ESAMS). The Contracting Officer will provide the Contractor with the required forms. Near miss reports are considered positive and proactive Contractor safety management actions.

- c. Conduct an accident investigation for any load handling equipment accident (including rigging gear accidents) to establish the root cause(s) of the accident. Complete the LHE Accident Report (Crane and Rigging Accident Report) form and provide the report to the Contracting Officer within 30 calendar days of the accident. Do not proceed with crane operations until cause is determined and corrective actions have been implemented to the satisfaction of the Contracting Officer. The Contracting Officer will provide a blank copy of the accident report form.

#### 1.13.3 LHE Inspection Reports

Submit LHE inspection reports required in accordance with EM 385-1-1 and as specified herein with Daily Reports of Inspections.

#### 1.13.4 Certificate of Compliance and Pre-lift Plan/Checklist for LHE and Rigging

Provide a Certificate of Compliance for LHE entering the Portsmouth Naval Shipyard under this Contract and in accordance with EM 385-1-1. Post certifications on the crane.

Develop a Standard Lift Plan (SLP) in accordance with EM 385-1-1 and using Standard Pre-Lift Crane Plan/Checklist for each lift planned. Submit SLP to the Contracting Officer for approval within 15 calendar days in advance of planned lift.

### 1.14 HOT WORK PERMIT

#### 1.14.1 Permit and Personnel Requirements

Submit and obtain a written permit prior to performing "Hot Work" (i.e. welding or cutting) or operating other flame-producing/spark producing devices, from the Portsmouth Naval Shipyard Fire Department via the Contracting Officer. A permit is required from the Explosives Safety Office for work in and around where explosives are processed, stored, or handled. CONTRACTORS ARE REQUIRED TO MEET ALL CRITERIA BEFORE A PERMIT IS ISSUED. Provide at least two (2) 20 pound 4A:20 BC rated extinguishers for normal "Hot Work". The extinguishers must be current inspection tagged, and contain an approved safety pin and tamper resistant seal. It is also mandatory to have a designated FIRE WATCH for any "Hot Work" performed at the Portsmouth Naval Shipyard. The Fire Watch must be trained in accordance with NFPA 51B and remain on-site for a minimum of 1 hour after completion of the task or as specified on the hot work permit.

When starting work in the facility, require personnel to familiarize themselves with the location of the nearest fire alarm boxes and place in memory the emergency Portsmouth Naval Shipyard Fire Department phone number. REPORT ANY FIRE, NO MATTER HOW SMALL, TO THE RESPONSIBLE PORTSMOUTH NAVAL SHIPYARD FIRE DEPARTMENT AND THE CONTRACTING OFFICER IMMEDIATELY.

a. Duration of Hot Work

At the discretion of the Portsmouth Naval Shipyard Fire Inspectors, a hot work permit may be written for up to one work week, (Monday through Friday), provided work is being performed at one specific location and will not hinder any life safety code.

Hot work permits must be issued for five (5) work days with a time period not to exceed twelve (12) hours. Request for weekend permits must be submitted at least three (3) working days in advance of the work to be performed and will only be valid for the weekend requested.

b. Hot Work Within a Confined Space

Hot work permits within a confined space will be issued on a daily basis with a time period not to exceed a twelve (12) hour shift. All requests for hot work permits within a confined space must be received a minimum of three (3) complete working days prior to entry. A duplicate copy of the air monitoring results will be furnished to the fire inspector at time of issuance.

1.14.2 Work Around Flammable Materials

Obtain permit approval from a NFPA Certified Marine Chemist or Certified Industrial Hygienist for "Hot Work" within or around flammable materials (such as fuel systems or welding/cutting on fuel pipes) or confined spaces (such as sewer wet wells, manholes, or vaults) that have the potential for flammable or explosive atmospheres.

Whenever these materials, except beryllium and chromium (VI), are encountered in indoor operations, local mechanical exhaust ventilation systems that are sufficient to reduce and maintain personal exposures to within acceptable limits must be used and maintained in accordance with manufacturer's instruction and supplemented by exceptions noted in EM 385-1-1.

1.15 CONFINED SPACE ENTRY REQUIREMENTS.

Confined space entry must comply with EM 385-1-1, 29 CFR 1926, 29 CFR 1910, and Directive CPL 2.100. Any potential for a hazard in the confined space requires a permit system to be used. Contractors entering and working in confined spaces while performing shipyard industry work are required to follow the requirements of OSHA 29 CFR 1915.

1.15.1 Rescue Procedures and Coordination with Local Emergency Responders

Develop and implement an on-site rescue and recovery plan and procedures. The rescue plan must not rely on local emergency responders for rescue from a confined space.

1.16 CONSTRUCTION INDOOR AIR QUALITY (IAQ) MANAGEMENT PLAN

Submit an IAQ Management Plan within 15 calendar days from receiving the Notice to Proceed and not less than 10 calendar days before the Preconstruction Meeting. Revise and resubmit plan as required by the Contracting Officer. Make copies of the final plan available to all workers on site. Include provisions in the plan to meet the requirements

specified below and to ensure safe, healthy air for construction workers and building occupants.

#### 1.16.1 Requirements During Construction

Provide for evaluation of indoor Carbon Dioxide concentrations in accordance with ASTM D6245. Provide for evaluation of volatile organic compounds (VOCs) in indoor air in accordance with ASTM D6345. Use filters with a Minimum Efficiency Reporting Value (MERV) of 8 in permanently installed air handlers during construction.

#### 1.16.2 Control Measures

Meet or exceed the requirements of ANSI/SMACNA 008 to help minimize contamination of the building from construction activities. The five requirements of this manual which must be adhered to are described below:

- a. HVAC protection: Isolate return side of HVAC system from surrounding environment to prevent construction dust and debris from entering the duct work and spaces.
- b. Source control: Use low emitting paints and other finishes, sealants, adhesives, and other materials as specified. When available, cleaning products must have a low VOC content and be non-toxic to minimize building contamination. Utilize cleaning techniques that minimize dust generation. Cycle equipment off when not needed. Prohibit idling motor vehicles where emissions could be drawn into building. Designate receiving/storage areas for incoming material that minimize IAQ impacts.
- c. Pathway interruption: When pollutants are generated use strategies such as 100 percent outside air ventilation or erection of physical barriers between work and non-work areas to prevent contamination.
- d. Housekeeping: Clean frequently to remove construction dust and debris. Promptly clean up spills. Remove accumulated water and keep work areas dry to discourage the growth of mold and bacteria. Take extra measures when hazardous materials are involved.
- e. Scheduling: Control the sequence of construction to minimize the absorption of VOCs by other building materials.

##### 1.16.2.1 Moisture Contamination

- a. Remove accumulated water and keep work dry.
- b. Use dehumidification to remove moist, humid air from a work area.
- c. Do not use combustion heaters or generators inside the building.
- d. Protect porous materials from exposure to moisture.
- e. Remove and replace items which remain damp for more than a few hours.

##### 1.16.2.2 Requirements After Construction

After construction ends and prior to occupancy, conduct a building flush-out or test the indoor air contaminant levels. Flush-out must be a minimum 2 weeks with MERV-13 filtration media as determined by ASHRAE 52.2

at 100 percent outside air. Air contamination testing must be consistent with EPA's current Compendium of Methods for the Determination of Air Pollutants in Indoor Air. After building flush-out or testing and prior to occupancy, replace filtration media. Filtration media must have a MERV of 13 as determined by ASHRAE 52.2.

#### 1.17 SEVERE STORM PLAN

In the event of a severe storm warning, the Contractor must comply with the applicable Storm Plan and:

- a. Secure outside equipment and materials and place materials that could be damaged in protected areas.
- b. Check surrounding area, including roof, for loose material, equipment, debris, and other objects that could be blown away or against existing facilities.
- c. Ensure that temporary erosion controls are adequate.

### PART 2 PRODUCTS

#### 2.1 CONFINED SPACE SIGNAGE

Provide permanent signs integral to or securely attached to access covers for new permit-required confined spaces. Signs for confined spaces must comply with NEMA Z535.2. Signs wording: "DANGER--PERMIT-REQUIRED CONFINED SPACE, DO NOT ENTER" in bold letters a minimum of one inch in height and constructed to be clearly legible with all paint removed. The signal word "DANGER" must be red and readable from 5 feet.

### PART 3 EXECUTION

#### 3.1 CONSTRUCTION AND OTHER WORK

Comply with EM 385-1-1, NFPA 70, NFPA 70E, NFPA 241, the APP, the AHA, Federal and State OSHA regulations, and other related submittals and Portsmouth Naval Shipyard fire and safety regulations. The most stringent standard prevails.

PPE is governed in all areas by the nature of the work the employee is performing. Use personal hearing protection at all times in designated noise hazardous areas or when performing noise hazardous tasks. Safety glasses must be worn or carried/available on each person. Mandatory minimum PPE includes:

- a. Head Protection Hat that meets ANSI/ISEA Z89.1
- b. Long Pants
- c. Appropriate Safety Footwear
- d. Appropriate Class Reflective Vests
- e. Safety Glasses

##### 3.1.1 Worksite Communication

Employees working alone in a remote location or away from other workers

must be provided an effective means of emergency communications (i.e., cellular phone, two-way radios, land-line telephones, or other acceptable means). The selected communication must be readily available (easily within the immediate reach) to the employee and must be tested prior to the start of work to verify that it effectively operates in the area/environment. An employee check-in/check-out communication procedure must be developed to ensure employee safety.

### 3.1.2 Hazardous Material Use

Each hazardous material must receive approval from the Contracting Officer or their designated representative prior to being brought onto the job site or prior to any other use in connection with this Contract. Allow a minimum of 10 working days for processing of the request for use of a hazardous material.

### 3.1.3 Hazardous Material Exclusions

Notwithstanding any other hazardous material used in this Contract, radioactive materials or instruments capable of producing ionizing/non-ionizing radiation (with the exception of radioactive material and devices used in accordance with EM 385-1-1 such as nuclear density meters for compaction testing and laboratory equipment with radioactive sources) as well as materials which contain asbestos, mercury, polychlorinated biphenyls, di-isocyanates, lead-based paint, and hexavalent chromium, are prohibited. The Contracting Officer, upon written request by the Contractor, may consider exceptions to the use of any of the above excluded materials. Low mercury lamps used within fluorescent lighting fixtures are allowed as an exception without further Contracting Officer approval. Notify the Radiation Safety Officer (RSO) via the Contracting Officer prior to excepted items of radioactive material and devices being brought on Portsmouth Naval Shipyard.

### 3.1.4 Unforeseen Hazardous Material

Contract documents identify materials such as PCB, lead paint, and friable and non-friable asbestos and other OSHA regulated chemicals (i.e. 29 CFR Part 1910.1000). If material(s) that may be hazardous to human health upon disturbance are encountered during construction operations, stop that portion of work and notify the Contracting Officer immediately. Within 14 calendar days the Government will determine if the material is hazardous. If the material is not hazardous or poses no danger, the Government will direct the Contractor to proceed without change. If the material is hazardous and handling of the material is necessary to accomplish the work, the Government will issue a modification.

## 3.2 UTILITY OUTAGE REQUIREMENTS

Outages are required when normal system operation is or could be impacted for utility services (i.e., water, sanitary sewer, storm sewer, electric services, fire alarm, etc.), roads, parking spaces, and crane rail, among others. For detailed information on the outage process, refer to paragraph FACILITY/UTILITY/SERVICE OUTAGE & INTERRUPTIONS PROCESS in Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME).

## 3.3 OUTAGE SAFETY REVIEW MEETING

Outage Safety Review Meetings are to be held prior to any outages that required hazardous energy control (HEC). Refer to Paragraph OUTAGE SAFETY

REVIEW MEETINGS in Section 01 30 00.00 22 ADMINISTRATIVE REQUIREMENTS (PWD ME) for additional information.

### 3.4 CONTROL OF HAZARDOUS ENERGY (LOCKOUT/TAGOUT)

The Contractor shall provide and operate a Hazardous Energy Control Program (HECP) in accordance with EM 385-1-1, 29 CFR 1910, 29 CFR 1915, ANSI/ASSP A10.44, NFPA 70E.

Contracting Officer will, upon request, apply lockout/tagout tags and take other actions that, because of experience and knowledge, are known to be necessary to make the particular equipment safe to work on.

No person, regardless of position or authority, shall operate any switch, valve, or equipment that has an official lockout/tagout tag attached to it, nor can such tag be removed except as provided in this Section.

No person shall work on any equipment that requires a lockout/tagout tag unless they, their immediate supervisor, project leader, or a subordinate has in their possession the stubs of the required lockout/tagout tags.

When work is to be performed on electrical circuits, only qualified personnel are to perform work on electrical circuits.

A supervisor who is required to enter an area protected by a lockout/tagout tag will be considered a member of the protected group provided he/she notifies the holder of the tag stub each time he/she enters and departs from the protected area.

Portsmouth Naval Shipyard and NAVFAC Personnel use a red lock and a red tag to indicate personnel are working on the systems. Use of a red lock and a red tag is highly encouraged to maintain continuity throughout the Portsmouth Naval Shipyard. The use of another colored locks and tags (blue for Portsmouth Naval Shipyard workers and Yellow for NAVFAC personnel) indicate that the system is out of service for some reason.

Identification markings on building light and power distribution circuits must not be relied on for established safe work conditions.

Before clearance will be given on any equipment other than electrical (generally referred to as mechanical apparatus), the apparatus, valves, or systems must be secured in a passive condition with the appropriate vents, pins, and locks.

Pressurized or vacuum systems must be vented to relieve differential pressure completely.

Vent valves must be tagged open during the course of the work.

Where dangerous gas or fluid systems are involved, or in areas where the environment may be oxygen deficient, system or areas must be purged, ventilated, or otherwise made safe prior to entry.

#### 3.4.1 Safety Preparatory Inspection Coordination Meeting with the Government or Utility

For electrical distribution equipment that is to be operated by Government or Utility personnel, the Prime Contractor and the subcontractor performing the work must attend the Safety Preparatory Inspection C

coordination Meeting, which will also be attended by the Contracting Officer's Representative, and is required by EM 385-1-1. The meeting will occur immediately preceding the start of work and following the completion of the outage safety review meeting. Both the safety preparatory inspection coordination meeting and the outage safety review meeting must occur prior to conducting the outage and commencing with lockout/tagout procedures.

#### 3.4.2 Lockout/Tagout Isolation

Where the Government or Utility performs equipment isolation and lockout/tagout, the Contractor must place their own locks and tags on each energy-isolating device and proceed in accordance with the HECF. Before any work begins, both the Contractor and the Government or Utility must perform energy isolation verification testing while wearing required PPE detailed in the Contractor's AHA and required by EM 385-1-1. Install personal protective grounds, with tags, to eliminate the potential for induced voltage in accordance with EM 385-1-1.

#### 3.4.3 Tag Placement

Lockout/tagout tags must be completed in accordance with the regulations printed on the back thereof and attached to any device which, if operated, could cause an unsafe condition to exist.

If more than one group is to work on any circuit or equipment, the employee in charge of each group must have a separate set of lockout/tag out tags completed and properly attached.

When it is required that certain equipment be tagged, the Government will review the characteristics of the various systems involved that affect the safety of the operations and the work to be performed; take the necessary actions, including voltage and pressure checks, grounding, and venting, to make the system and equipment safe to work on; and apply such lockout/tag out tags to those switches, valves, vents, or other mechanical devices needed to preserve the safety provided. This operation is referred to as "Providing Safety Clearance."

#### 3.4.4 Tag Removal

Upon completion of work, conduct lockout/tagout removal procedure in accordance with the HECF. In accordance with EM 385-1-1, each lock and tag must be removed from each energy isolating device by the authorized individual or systems operator who applied the device. When any individual or group has completed its part of the work and is clear of the circuits or equipment, the supervisor, project leader, or individual for whom the equipment was tagged must turn in their signed lockout/tagout tag stub to the Contracting Officer. That group or individual's lockout/tag-out tags on equipment may then be removed once formal authorization is provided by the Contracting Officer.

### 3.5 FALL PROTECTION PROGRAM

Establish a fall protection program, for the protection of all employees exposed to fall hazards. Within the program include company policy, identify roles and responsibilities, education and training requirements, fall hazard identification, prevention and control measures, inspection, storage, care and maintenance of fall protection equipment, and rescue and evacuation procedures in accordance with EM 385-1-1.

### 3.5.1 Fall Protection Equipment and Systems

Enforce use of personal fall protection equipment and systems designated (to include fall arrest, restraint, and positioning) for each specific work activity in the Site Specific Fall Protection and Prevention Plan and AHA at all times when an employee is exposed to a fall hazard. Protect employees from fall hazards as specified in EM 385-1-1.

Provide personal fall protection equipment, systems, subsystems, and components that comply with EM 385-1-1 and 29 CFR 1926.

#### 3.5.1.1 Additional Personal Fall Protection Measures

In addition to the required fall protection systems, other protective measures such as safety skiffs, personal flotation devices, and life rings, are required when working above or next to water in accordance with EM 385-1-1. Personal fall protection systems and equipment are required when working from an articulating or extendable boom, swing stages, or suspended platform. In addition, personal fall protection systems are required when operating other equipment such as scissor lifts. The need for tying-off in such equipment is to prevent ejection of the employee from the equipment during raising, lowering, travel, or while performing work.

#### 3.5.1.2 Personal Fall Protection Equipment

Only a full-body harness with a shock-absorbing lanyard or self-retracting lanyard is an acceptable personal fall arrest body support device. The use of body belts is not acceptable. Harnesses must have a fall arrest attachment affixed to the body support (usually a Dorsal D-ring) and specifically designated for attachment to the rest of the system. Snap hooks and carabiners must be self-closing and self-locking, capable of being opened only by at least two consecutive deliberate actions and have a minimum gate strength of 3,600 lbs in all directions. Use webbing, straps, and ropes made of synthetic fiber. The maximum free fall distance when using fall arrest equipment must not exceed 6 feet, unless the proper energy absorbing lanyard is used. Always take into consideration the total fall distance and any swinging of the worker (pendulum-like motion), that can occur during a fall, when attaching a person to a fall arrest system. Equip all full body harnesses with Suspension Trauma Preventers such as stirrups, relief steps, or similar in order to provide short-term relief from the effects of orthostatic intolerance in accordance with EM 385-1-1.

### 3.6 SHIPYARD REQUIREMENTS

All personnel who enter the Controlled Industrial Area (CIA) must wear mandatory personal protective equipment (PPE) at all times and comply with PPE postings of shops both inside and outside the CIA.

### 3.7 EQUIPMENT

#### 3.7.1 Use of Explosives

Use of explosives or blasting is not permitted at Portsmouth Naval Shipyard.

### 3.8 EXCAVATIONS AND UTILITY LOCATING

Soil classification must be performed by a competent person in accordance with 29 CFR 1926 and EM 385-1-1.

#### 3.8.1 Utility Locations

##### A. General

Excavation or ground penetrating work is defined as any operation in which earth, rock or other material below ground is moved or otherwise displaced, by means of power and hand tools, power equipment which includes grading, trenching, digging, boring, auguring, tunneling, scraping and cable or pipe driving except tilling of soil, gardening or displacement of earth, rock or other material for agricultural purposes. Removal of bituminous concrete pavement or concrete is not considered excavation. Ground penetrating work may include but is not limited to installing fence posts, probes, borings, piles, sign posts, stakes or anchor rods of any kind that penetrates the soil more than 3". The "Excavator" is defined as the person directly responsible for performing the excavation or ground penetrating work.

##### B. Underground Utilities Location

The Contractor/Excavator shall fully comply with the State of Maine "DIGSAFE" law (Title 23, MRSA 3360-A). Existing underground utilities shown on the plans are based on the Portsmouth Naval Shipyard Total Map and are shown in their approximate locations only.

The Excavator shall pre-mark the excavation area in white paint only. (Field notes may be done in Pink paint). The Excavator shall notify "DIG SAFE" (1-888-344-7233) at least within 14 calendar days, but no more than 30 calendar days, prior to the commencement of the excavation or ground penetrating activity. The Excavator shall notify Unitil at least within 14 calendar days, but no more than 30 calendar days, prior to the commencement of excavation or ground penetrating activity when the activity is within twenty (20) feet of a natural gas line.

The Prime Contractor / Excavator shall prepare a NAVFAC Dig Safe Utility Locate Request Form (Attachment B) at least within 14 calendar days prior to the commencement of the excavation or ground penetrating activity and submit the form to the NAVFAC DM/ET via the Contracting Officer. (The NAVFAC Dig Safe Utility Locate Request Form is provided as Attachment B.)

The Government will locate and mark the underground utilities within 14 calendar days of receiving the Dig Safe Notification. Unitil will locate and mark the underground natural gas utilities.

Excavation or ground penetrating activities cannot commence until the utilities have been marked in the field and the NAVFAC Dig Safe Utility Locate Request Form has been returned to the Contractor indicating the PWD ME Dig Safe review process has been completed and excavation has been approved by the Contracting Officer and the PWD ME Dig Safe Coordinator.

If the excavation or ground penetrating activities do not commence within 27 days of Dig Safe notification or the excavation work is

expanded outside the location originally specified in the notification, the Excavator shall renotify Dig Safe, the Contracting Officer and the PWD ME Dig Safe Coordinator.

The Contractor shall maintain the utility markings through out the excavation period at the Contractor's expense.

The Contractor shall contact the PWD ME Dig Safe Coordinator (DSC) if there are any questions regarding the underground utilities or the Dig Safe process.

#### C. Third Party Utility Locate

The Contractor must provide the services of a third party, qualified independent utility locating company/person(s) (cannot be the Government's Utility Locating Firm) to positively identify underground utilities in the work area. The third party independent locating firm is in addition to the PWD ME Dig Safe Process.

The Third Party review must be completed in conjunction with the PWD ME Dig Safe marking process. Once the Third Party Locate Company has completed their review of the excavation area and the review of the Government markings are confirmed, the Third Party Locate Company & Contractor must sign the Contractor Dig-Safe Certification Form (Attachment C) and submit the form to the Contracting Officer/DSC prior to commencing excavation. If the Third Party Locate Company finds any discrepancies with the Government's utility markings, the Contractor must notify the Contracting Officer/DSC immediately and work with the DSC to resolve the discrepancy **PRIOR TO THE START OF EXCAVATION.**

#### 3.8.2 Utility Location Verification

Physically verify underground utility locations, including utility depth, by hand digging using wood or fiberglass handled tools when any adjacent construction work is expected to come within three (3) feet of the underground system. When any adjacent construction work is expected to come within twenty (20) feet of a natural gas utility, the Contractor must notify Unitil in addition to notifying "DIG SAFE".

#### 3.8.3 Utilities Within and Under Concrete (roofs, walls, floors, etc.) Bituminous Asphalt, and Other Impervious Surfaces (Including Dry Dock and Berthing Walls)

Utilities located within and under concrete slabs or pier structures, bridges, parking areas, and the like, are extremely difficult to identify. This will require utility locating **both before and after** concrete slab removal when excavation continues below bottom of slab. Whenever Contract work involves chipping, saw cutting, drilling or core drilling through concrete, bituminous asphalt or other impervious surfaces, the existing utility location must be coordinated with Portsmouth Naval Shipyard UEM department in addition to location and depth verification by a third party, independent, private locating company.

The third party, independent, private locating company must locate utility depth by use of Ground Penetrating Radar (GPR), X-ray, bore scope, or ultrasound prior to the start of demolition and construction. Outages to isolate utility systems must be used in circumstances where utilities are unable to be positively identified. The use of historical drawings does

not alleviate the Contractor from meeting this requirement. Any markings made during the utility investigation must be maintained by the Contractor throughout the Contract.

3.8.4 Excavating with Hazardous or Mission Critical Utilities Within the Excavation Area (as identified by DSC or plans)

- a. Refer to Paragraph CRITICAL SHIPYARD INFRASTRUCTURE REQUIREMENTS in Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME) for definition of and additional requirements for Critical Shipyard Infrastructure.
- b. The Contractor must employ supplemental daily Dig Safe procedures to include an additional checkoff on Contractor Daily Activity Plan to confirm all utilities have been clearly marked and reviewed with the SSHO. The SSHO & the Excavator must complete and sign the CONTRACTOR UTILITY LOCATE – PRE-EXCAVATION SAFETY CHECKLIST (Attachment D). This checklist must be reviewed and signed by the NAVFAC DM/ET prior to commencing any excavation/trenching work.
- c. The Contractor must provide a Dig Safe laminated utility color coding system posted in or near all heavy digging equipment for easy reference to type of utility. See Attachment G for an example Color Coding reference.
- d. The SSHO must complete a pre-excavation walk as part of the morning procedure to help ensure all known utilities are identified and markings are refreshed with the appropriate color-coded paint. The Excavation/Trenching Competent person must complete the Contractor Daily Worksite Checklist for Trenching/Excavation Sites included as Attachment E. The Daily Checklist must be completed prior to commencing excavation/trenching work and must be submitted with the NAVFAC DM/ET daily.
- e. Contractor must provide additional danger signage, to mark areas of known live underground utilities. Signage must comply with NEMA Z535.2.
- f. Contractor must ensure a 'spotter' accompanies the equipment operator during excavation work.
- g. Contractor to provide notification to the NAVFAC DM/ET via the Contracting Officer no later than 7 working days prior to holding the preparatory and initial pre-excavation/demo safety review meeting. The NAVFAC DM/ET, as well as the PWD ME DSC, **WILL** attend this meeting to ensure safety and preservation of critical utilities is discussed with adequate focus.
- h. The Contractor must confirm and identify the closest utility isolation points and develop mitigation strategies with the utility owner (Coordinate with the PWD ME DSC) to ensure the safe excavation adjacent to these utilities. Utility Outages to isolate utility systems may need to be considered in circumstances where the excavation work cannot be completed safely.
- i. If there is a utility strike, the Contractor must stop all work and notify the Contracting Officer immediately. The Contractor must complete the Underground Utility Strike Review Checklist (See Attachment F) within 2 working days of the utility strike. See additional requirements in Paragraphs MISHAP NOTIFICATION and ACCIDENT REPORTS herein.

### 3.9 ELECTRICAL

Perform electrical work in accordance with EM 385-1-1.

#### 3.9.1 Electrical Work

As described in EM 385-1-1, electrical work is to be conducted in a de-energized state unless there is no alternative method for accomplishing the work. In those cases obtain an energized work permit from the Contracting Officer. The energized work permit application must be accompanied by the AHA and a summary of why the equipment/circuit needs to be worked energized. Underground electrical spaces must be certified safe for entry before entering to conduct work. Cables that will be cut must be positively identified and de-energized prior to performing each cut. Cables shall be verified as de-energized by using a spiking tool. Attach temporary grounds in accordance with ASTM F855 and IEEE 1048. Perform all medium and high voltage cable cutting remotely using hydraulic cutting tool. When racking in or live switching of circuit breakers, no additional person other than the switch operator is allowed in the space during the actual operation. Plan so that work near energized parts is minimized to the fullest extent possible. Use of electrical outages clear of any energized electrical sources is the preferred method.

When working in energized substations, only qualified electrical workers are permitted to enter. When work requires work near energized circuits as defined by NFPA 70, high voltage personnel must use personal protective equipment that includes, as a minimum, electrical hard hat, safety shoes, insulating gloves, and electrical arc flash protection for personnel as required by NFPA 70E. Insulating blankets, hearing protection, and switching suits may also be required, depending on the specific job and as delineated in the Contractor's AHA. Ensure that each employee is familiar with and complies with these procedures and 29 CFR 1910.

#### 3.9.2 Qualifications

Electrical work must be performed by QP with verifiable credentials who are familiar with applicable code requirements. Verifiable credentials consist of State, National, and Local Certifications or Licenses that a Master or Journeyman Electrician may hold, depending on work being performed, and must be identified in the appropriate AHA. Journeyman/Apprentice ratio must be in accordance with State and Local requirements applicable to where work is being performed.

#### 3.9.3 Arc Flash

Conduct a hazard analysis/arc flash hazard analysis whenever work on or near energized parts greater than 50 volts is necessary, in accordance with NFPA 70E.

All personnel entering the identified arc flash protection boundary must be QPs and properly trained in NFPA 70E requirements and procedures. Unless permitted by NFPA 70E, no Unqualified Person is permitted to approach nearer than the Limited Approach Boundary of energized conductors and circuit parts. Training must be administered by an electrically qualified source and documented.

#### 3.9.4 Grounding

Ground electrical circuits, equipment and enclosures in accordance with NFPA 70 and IEEE C2 to provide a permanent, continuous and effective path to ground unless otherwise noted by EM 385-1-1.

#### 3.9.5 Testing

Temporary electrical distribution systems and devices must be inspected, tested and found acceptable for Ground-Fault Circuit Interrupter (GFCI) protection, polarity, ground continuity, and ground resistance before initial use, before use after modification, and at least monthly. Monthly inspections and tests must be maintained for each temporary electrical distribution system, and signed by the electrical CP or QP.

#### 3.9.6 Portable Extension Cords

Size portable extension cords in accordance with manufacturer ratings for the tool to be powered and protected from damage. Immediately remove from service all damaged extension cords. Portable extension cords must meet the requirements of EM 385-1-1, NFPA 70E, and OSHA electrical standards.

-- End of Section --

## SECTION 01 35 26 – ATTACHMENT A

### CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

#### 1 CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

1.1 The following is a list of requirements that contractors shall comply with for all contracts that may result in the use of a category 1 or 4 crane, multi-purpose machines, forklifts, construction equipment, and rigging gear when used on Navy property to lift suspended loads. Non-compliance with the requirements of this instruction may result in denial of access, stopping of operations, or removal from Navy property.

#### 1.2 References:

1.2.1 NOT USED

1.2.2 American Society of Mechanical Engineers (ASME) B30.3 (tower cranes), B30.5 (mobile cranes), B30.8 (floating cranes), B30.9 (slings), B30.20 (below the hook lifting devices), B30.22 (articulating booms), B30.26 (rigging hardware); ANSI/ITSDF B56.6 (rough terrain forklifts); Safety Standards for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings

1.2.3 CFR, Title 29, Chapter XVII, Part 1917, Marine Terminals.

1.2.4 CFR, Title 29, Chapter XVII, Part 1926, Safety and Health Regulations for Construction

1.2.5 CFR, Title 29, Chapter XVII, Part 1915, Occupational Safety and Health Standards for Shipyard Employment

1.2.6 OPNAVINST 5100.23, Navy Safety and Occupational Health Program Manual

1.2.7 EM 385-1-1, Safety and Health Requirements Manual, U.S. Army Corps of Engineers

1.2.8 NAVFAC Guide Specification NFGS-01525D, Safety Requirements

1.3 These requirements are solely intended to provide for the protection of Government property and personnel and are not intended to, and do not, in any manner whatsoever, relieve the contractor of its responsibility, including, without limitation, its responsibility for the protection of its equipment and personnel.

1.4 Notification Requirement: Contractor shall notify the Contracting Officer 7 calendar days in advance of the intent of bringing a non-Navy owned crane onto Navy property or of any multi-purpose machines, material handling equipment, or construction equipment that may be used in a crane-like application to lift suspended loads. The contractor shall also specify when crane entry onto Navy property is scheduled during back shift, weekend, or holiday hours of operation. All entries shall be through a prearranged entry point. The following documentation shall be provided along with notification: a copy of Form 16-1 and objective evidence of operator qualifications for cranes with rated capacities of 2,000 lbs. or greater. Failure to schedule or provide necessary documentation may result in the crane being denied access to the facility.

1.5 The contractor shall comply with applicable reference 1.2.2 standards (e.g., B30.3 for construction tower cranes, B30.5 for mobile cranes, B30.8 for floating cranes, B30.9 for slings, B30.20 for below the hook lifting devices, and B30.22 for articulating boom cranes), B30.26 for rigging hardware, and ANSI/ITSDF B56.6 for rough terrain forklifts). For barge mounted mobile cranes, require a third party certification from an OSHA accredited organization (or from a state accredited organization for those states with OSHA approved state plans), a load indicating device, a wind-indicating device, and a marine type list and trim indicator readable in one-half degree increments. Third party certification is not required for barge-mounted mobile cranes at naval activities in foreign countries.

## SECTION 01 35 26 – ATTACHMENT A

### CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

1.6 Certification of Compliance (reference 1.2.1): The contractor shall complete a certificate of compliance that the crane (or other machine if used to lift suspended loads) and rigging gear meet applicable OSHA and ANSI/ASME regulations (with the contractor citing which OSHA regulations are applicable, e.g., cranes/multi-purpose machines used in cargo transfer shall comply with reference 1.2.3; cranes/multi-purpose machines used in construction, demolition, or maintenance shall comply with reference 1.2.4; cranes/multi-purpose machines used in ship repair shall comply with reference 1.2.5; slings shall comply with ASME B30.9; rigging hardware shall comply with ASME B30.26). For cranes (or other machine if used to lift suspended loads) and rigging equipment at naval activities in foreign countries, the contractor shall certify that the crane and rigging gear conform to the appropriate host country safety standards. The contractor shall also certify that all of its crane (or other machine) operators working on the naval activity have been trained not to bypass safety devices (e.g., anti-two block devices) during lifting operations, and that its operators, riggers, and company officials are aware of the actions required in the event of an accident as specified in the contract. Require that the certifications be posted on the crane. When a crane on Navy property is not authorized for use, the Certification of Compliance shall state, "Operation of this Crane is NOT Authorized."

1.7 The contractor shall certify (reference 1.2.1) that the crane or machine operator is qualified and trained for the operation of the crane to be used. For mobile and commercial truck mounted cranes with OEM rated capacities of greater than 2,000 pounds, the crane operator shall be designated as qualified by a source that qualifies crane operators (i.e., a union, a government agency, or an organization that tests and qualifies crane operators). Proof of current qualification shall be provided.

1.8 For multi-purpose machines, material handling equipment and construction equipment used to lift loads suspended by rigging equipment, the contractor shall have proof or authorization from the machine OEM that the machine is capable of making lifts of loads suspended by rigging equipment. The contractor shall demonstrate that the equipment is properly configured to make such lifts and is equipped with a load chart.

1.9 All hooks used on cranes, hoists, other machines, and rigging gear shall have self-closing latches or the throat opening shall be "moused" (secured with wire, rope, heavy tape, etc.) or otherwise secured to prevent the attached item from coming free of the hook under a slack condition. The following exceptions apply and shall be approved by the contractor's technical organization: items where the hook throat is fully obstructed and not available for manual securing and lifts where securing the hook throat increases the danger to personnel such as forge shop, dip tank, or underwater work.

#### 1.10 Loading Limitations:

CAUTION: Piers and waterfront areas such as along dry docks and quay walls may have load restrictions.

1.10.1 The contractor shall notify the Contracting Officer prior to moving a crane on a pier, dry dock, or other waterfront area. Provide the Contracting Officer with the crane make, model, and configuration in which it is to be used.

1.10.2 The contractor shall comply with crane access routes and load limitations issued with the contract.

1.10.3 Allowable Surface Loads. Loads transferred to soils and pavements shall be minimized to a desired maximum of 3000 pounds per square foot, by placement of cribbing or steel pads under rubber-tired crane outriggers and trailer stanchions/sand shoes, or by placement of mats under treads of crawler cranes. Visually inspect areas adjacent to cribbing or plates and report any unusual bituminous pavement surface conditions, irregularities, or cracking to the Contracting Officer.

1.10.3.1 Outriggers of rubber-tired cranes shall be landed on two layers of timbers of appropriate thickness, oriented at right angles to each other, or landed on properly designed steel pads. Treads of crawler cranes shall run on appropriate mats. Use and design of cribbing, plates and mats shall be in a manner consistent with general construction industry standards.

## SECTION 01 35 26 – ATTACHMENT A

### CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

1.10.3.2 Position loads that will remain on trailers detached from tractors to attain a distribution of 65 percent to rear axles and 35 percent to front support stanchions/sand shoes. For example, assuming an 83000 pound maximum gross weight and a soil bearing pressure of 3000 pounds per square foot, the required support under each sand shoe would be 2.5 feet x 2.5 feet. Accordingly, two tiers of timber cribbing at right angles, each 2.5 feet x 2.5 feet x 4 inches, or a properly designed 2.5 feet x 2.5 feet steel pad would be utilized under each trailer stanchion/sand shoe.

1.11 Prior to making any critical lift, the contractor shall provide a critical lift plan for each of the following lifts: lifts over 75 percent of the capacity of the crane, hoist, or other machine (50 percent of the capacity of a barge mounted mobile crane's hoists) at any radius of lift; lifts involving more than one crane, hoist, or other machine; lifts of personnel (lifts of personnel suspended by rigging equipment from multi-purpose machines, material handling equipment, or construction equipment shall not be permitted); lifts made in the vicinity of overhead power lines; erection of cranes; and lifts involving non-routine rigging or operation, sensitive equipment, or unusual safety risks. The plan shall include the following as applicable:

1.11.1 The size and weight of the load to be lifted, including crane (or other machine) and rigging equipment that add to the weight. The OEM's maximum load capacities for the entire range of the lift shall also be provided.

1.11.2 The lift geometry, including the crane (or other machine) position, boom length and angle, height of lift, and radius for the entire range of the lift. Applies to both single and tandem crane/machine lifts.

1.11.3 A rigging plan, showing the lift points, rigging equipment, and rigging procedures.

1.11.4 The environmental conditions under which lift operations are to be stopped.

1.11.5 For lifts of personnel, the plan shall demonstrate compliance with the requirements of reference

1.11.6 For barge mounted mobile cranes, barge stability calculations identifying crane placement/footprint; barge list and trim based on anticipated loading; and load charts based on calculated list and trim specific to the barge the crane is mounted on. The amount of list and trim shall be within the crane manufacturer's requirements.

1.11.7 For lifts in the vicinity of overhead power lines (i.e., if any part of the crane or other machine, including the fully extended boom of a telescoping boom crane or machine, or the load could approach the distances noted in figure 10-3 of reference 1.2.1 during a proposed operation), the plan shall demonstrate compliance to 29 CFR 1926.550(a)(15).

1.12 The following additional documentation is required for contractor provided tower cranes (those cranes defined by ASME B30.3).

1.12.1 Foundation design and requirements

1.12.2 Installation instructions 1.12.4

1.12.3 Assembly and disassembly instructions including climbing/jumping instructions if applicable

1.12.4 Operating manual, limitations, and precautions

1.12.5 Periodic inspection and maintenance requirements

1.13 Crane and Rigging Gear Accident Reporting and Record Keeping: Contractor's operating cranes on Navy property shall report all WHE accidents that occur incidental to an operation, project, or facility as

## SECTION 01 35 26 – ATTACHMENT A

### CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

prescribed by paragraphs (1.10.1) through (1.10.3) requirements below. Contractors shall report directly to their respective Contracting Officer. There are two general categories of accidents as defined below. Crane accidents are those that occur during operation of a crane. Rigging gear accidents are those that occur when gear is used by itself in weight handling operation i.e., without a crane.

1.13.1 Crane Accident: For the purpose of this definition, it is assumed there is an "operating envelope" around any crane, and inside the envelope are the following elements:

- The crane
- The operator
- The rigger(s) and crane walker
- Other personnel involved in the operation (supervisor, mechanic, tag line handler, engineer, etc.)
- The rigging gear between the hook and the load
- The load
- The crane's supporting structure (ground, rail, etc.)
- The lift procedure

1.13.1.1 Definition: A crane accident occurs when any one or more of the six elements in the operating envelope fails to perform correctly during operation, including operation during maintenance, or testing resulting in the following:

- Personnel injury or death. Minor injuries that are inherent in any industrial operation, including strains and repetitive motion related injuries, shall be reported by the normal personnel injury reporting process in lieu of these requirements.
- Material or equipment damage
- Dropped load
- Derailment
- Two-blocking
- Overload (This includes load tests when the test load tolerance is exceeded.)
- Collision, including unplanned contact between the load, crane, and/or other objects.

A component failure (e.g., motor burnout, gear tooth failure, bearing failure) is not considered an accident solely due to material or equipment damage unless the component failure results in damage to other components (e.g., dropped boom, dropped load, roll over, etc.). [Bullets] 3, 4, 5, 6, and 7 are considered crane accidents even though no material damage or injury occurs.

Exception: If a crane is used as an anchor point for a portable hoist/rigging gear, rigging gear accident as defined in paragraph 1.10.2 below is not considered a crane accident if the crane is not being operated (no functions are in motion) at the time of the rigging gear accident, unless the accident results in an overload or damage to the crane, in which case it shall be reported as a crane accident.

1.13.2 Rigging Gear Accidents: For the purpose of this definition, it is assumed there is an "operating envelope" around any weight handling operation, and inside the envelope are the following:

- Rigging gear and miscellaneous equipment
- The user of the gear or equipment
- Other personnel involved in the operation (supervisor, mechanic, tag line handler, engineer, etc.)
- The load
- The gear or equipment's supporting structure
- The load's rigging path

## SECTION 01 35 26 – ATTACHMENT A

### CONTRACTOR CRANE, MULTI-PURPOSE MACHINE, FORKLIFT, CONSTRUCTION EQUIPMENT, AND RIGGING GEAR REQUIREMENTS

- The rigging procedure

1.13.2.1 Definition. A rigging gear accident occurs when any one or more of the five elements in the operating envelope fails to perform correctly during weight handling operations resulting in the following:

- Personnel injury or death. Minor injuries that are inherent in any industrial operation, including strains and repetitive motion related injuries, shall be reported by the normal personnel injury reporting process of the activity in lieu of these requirements.
- Material or equipment damage that requires the damaged item to be repaired because it can no longer perform its intended function. This does not include superficial damage such as scratched paint, damaged lagging, or normal wear on rigging gear.
- Dropped load.
- Two-blocking of cranes and powered hoists.
- Overload. (This includes load tests when the test load tolerance is exceeded.)

A component failure (e.g., motor burnout, gear tooth failure, bearing failure) is not considered an accident solely due to material or equipment damage unless the component failure results in damage to other components (e.g., dropped load, damaged load, etc.). [Bullets] 3, 4, and 5 are considered accidents even though no material damage or injury occurs.

1.13.3 The contractor shall notify the Contracting Officer as soon as practical, but not later than four hours, after any WHE accident. The contractor shall secure the accident site and protect evidence until released by the Contracting Officer. The contractor shall conduct an accident investigation to establish the root cause(s) of the accident. Crane operations shall not proceed until cause is determined and corrective actions have been implemented to the satisfaction of the Contracting Officer. The contractor shall provide the Contracting Officer within 30 days of any accident a Crane and Rigging Gear Accident Report using the form provided in reference 1.2.1 consisting of a summary of circumstances, an explanation of causes(s), photographs if available, and corrective actions taken. These notifications and reporting requirements are in addition to those promulgated by reference 1.2.6 and related claimant instructions.

1.14 Each contractor shall perform the following actions prior to conducting crane operations on Navy property:

1.14.1 Inspection Requirements: It shall be the sole responsibility of the contractor to assure the Contracting Officer and/or designated Navy personnel that the crane and associated rigging gear are in good working order and safe for use.

1.14.1.1 Crane Inspection: Perform pre-operational inspection of the crane in the presence of a representative of the Contracting Office of the crane prior to starting work on Navy property. Inspection shall meet all applicable reference 1.2.2, reference 1.2.7 (for NAVFAC construction contracts), and OSHA requirements.

1.14.1.2 Wire Rope Inspection: Perform a Wire Rope Inspection in the presence of a representative of the contracting office to applicable reference 1.2.2, reference 1.2.7 (for NAVFAC construction contracts), and OSHA requirements.

1.14.1.3 Rigging Gear Inspection: Perform a Rigging Gear Inspection in the presence of a representative of the contracting office to applicable reference 1.2.2, reference 1.2.7 (for NAVFAC construction contracts), and OSHA requirements.

SECTION 01 35 26 – ATTACHMENT A  
CONTRACTOR CRANE ENTRY CHECKLIST

|    |                                                                                                                                                                                                                                                                                                                        |  |                      |                                         |                                        |                                         |

| 16 | What is the maximum total crane lift (sum of 13, 14 & 15 above)?                                                                                                                                                                                                                                                       |  | TOTAL                | lbs.                                    |                                        |                                         |
| 17 | What is the capacity of the crane as configured                                                                                                                                                                                                                                                                        |  |                      | lbs.                                    |                                        |                                         |
| 18 | What percentage of crane capacity does this lift represent?                                                                                                                                                                                                                                                            |  |                      | %                                       |                                        |                                         |

SECTION 01 35 26 – ATTACHMENT A  
CONTRACTOR CRANE ENTRY CHECKLIST

|    |                                                                                                                                                                                         |            |             |                                        |                                                                                 |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------|----------------------------------------|---------------------------------------------------------------------------------|
| 19 | What is the main boom length? If a jib will be utilized, indicate the length and offset.                                                                                                |            | <b>MAIN</b> | <b>JIB</b>                             | <b>OFFSET</b>                                                                   |
| 20 | What are the minimum and maximum load radii?                                                                                                                                            | <b>Min</b> |             | <b>Max</b>                             |                                                                                 |
| 21 | Does the plan include the manufacturer's load chart for entire range of lift(s)?                                                                                                        |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |
| 22 | Does plan include ground loading and outrigger reaction data to determine cribbing requirements, or a Waterfront Operational Permit?                                                    |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/><br><b>N/A</b><br><input type="checkbox"/> |
| 23 | For crawler crane, does the plan indicate area restrictions for operation?                                                                                                              |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/><br><b>N/A</b><br><input type="checkbox"/> |
| 24 | For floating crane, does plan include maximum allowable list?                                                                                                                           |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/><br><b>N/A</b><br><input type="checkbox"/> |
| 25 | For mobile crane mounted on barge, is crane equipped with load indicating device? Wind indicating device? Marine type list and trim indicator (readable in one-half degree increments)? |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/><br><b>N/A</b><br><input type="checkbox"/> |
| 26 | For mobile crane mounted on barge, does plan include revised load chart?                                                                                                                |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/><br><b>N/A</b><br><input type="checkbox"/> |
| 27 | What are the environmental conditions under which crane operations are to be stopped?                                                                                                   |            |             |                                        |                                                                                 |
| 28 | Will the crane perform critical lifts? <b>(If no, skip items 29 –49.)</b>                                                                                                               |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |
| 29 | What circumstances require this lift to be classified as a critical lift? (Blind lift, 75% of chart, non-routine rigging, etc.)                                                         |            |             |                                        |                                                                                 |
| 30 | What are the exact dimensions of the load? (L x W x H)                                                                                                                                  |            |             |                                        |                                                                                 |
| 31 | Does the plan indicate the crane position? (Overhead view)                                                                                                                              |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |
| 32 | What is the maximum lift height of the lift?                                                                                                                                            |            |             |                                        |                                                                                 |
| 33 | What is the minimum boom angle?                                                                                                                                                         |            |             |                                        |                                                                                 |
| 34 | What is the maximum boom angle?                                                                                                                                                         |            |             |                                        |                                                                                 |
| 35 | What is the name of the operator?                                                                                                                                                       |            |             |                                        |                                                                                 |
| 36 | Indicate name(s) of backup operator (if required).                                                                                                                                      |            |             |                                        |                                                                                 |
| 37 | Does the plan show lift points?                                                                                                                                                         |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |
| 38 | Does the plan describe the rigging procedures?                                                                                                                                          |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |
| 39 | Does the plan indicate rigging hardware requirements?                                                                                                                                   |            |             | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/>                                           |

Enclosure 2 Cont'd

SECTION 01 35 26 – ATTACHMENT A  
CONTRACTOR CRANE ENTRY CHECKLIST

|    |                                                                                                                                                                         |                                        |                                       |                                        |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|---------------------------------------|----------------------------------------|
| 40 | For personnel lifts, does the plan demonstrate compliance with 29 CFR 1926.550?                                                                                         | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> | <b>N/A</b><br><input type="checkbox"/> |
| 41 | Does EM 385-1-1 govern this lift?                                                                                                                                       | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> | <b>N/A</b><br><input type="checkbox"/> |
| 42 | What are the coordination and communication requirements for the lift (e.g., radio and hand signals)?                                                                   |                                        |                                       |                                        |
| 43 | For tandem or tailing crane lifts, does the plan indicate the make and model of the crane, the line, boom, and swing speeds, and the requirement for an equalizer beam? | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> | <b>N/A</b><br><input type="checkbox"/> |
| 44 | For floating cranes, refer to questions 20-22?                                                                                                                          |                                        |                                       |                                        |
| 45 | What is the name of the lift supervisor?                                                                                                                                |                                        |                                       |                                        |
| 56 | Does the plan indicate the qualifications of the lift supervisor?                                                                                                       | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> |                                        |
| 47 | What are the names of the riggers?                                                                                                                                      |                                        |                                       |                                        |
| 48 | Does the plan indicate the qualifications of the riggers?                                                                                                               | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> |                                        |
| 49 | Did all involved personnel (Operator, Riggers, Lift Supervisor, etc.) sign the critical lift plan?                                                                      | <b>Yes</b><br><input type="checkbox"/> | <b>No</b><br><input type="checkbox"/> |                                        |

- 1) Prime Contractor SSHO is to meet Contractor Crane at CVIS to review certificate of compliance and verify crane operator license with ET
- 2) Contractor Crane operator to complete standard pre-lift crane plan checklist with signatures and returning to Prime Contractor prior to making crane lift.
- 3) Prime contractor shall submit crane rail outages, parking outages and street outages prior to submitting crane package.
- 4) Prime contractor will coordinate with crane contractor approved site location including traffic control, pedestrian walkways along with swing radius of crane with barrier tape prior to making crane lift.
- 5) Prime contractor will conduct a pre-lift meeting with AHA review to include all parties involved in lift operations and receive signature acknowledge of procedures, verify all rigging gear meets required specified standards.

**ET Concurrence:** \_\_\_\_\_ **Phone#** \_\_\_\_\_ **NAVFAC Crane/**  
**Safety Concurrence:** \_\_\_\_\_ **Navfac use only; Risk Assessment Code;**

Definitions 1 thru 3; **To be assigned by Crane SME**

\_\_\_ Level 1 – Full-Time ET on site to observe crane activities; and completes a daily surveillance sheet.

\_\_\_ Level 2 - ET visits site once daily to observe crane activities; and completes a surveillance sheet for each site visit.

\_\_\_ Level 3 – ET visits site once per week to observe crane activities; and submits a weekly surveillance sheet.

| CONTRACTOR CRANE OR RIGGING OPERATION CHECKLIST |                                                                                                                                                                                                                    |     |    |     |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|-----|
|                                                 |                                                                                                                                                                                                                    | YES | NO | N/A |
| 1                                               | Is the Certificate of Compliance, P-1, in the operator's cab (or in the contractor's on-site office for rigging operations) with the current operator's name listed?                                               |     |    |     |
| 2                                               | Is the crane/machine transited to and from the job site correctly? Are the OEM instructions for travel being followed?                                                                                             |     |    |     |
| 3                                               | Does the operator know the weight of the load to be lifted?                                                                                                                                                        |     |    |     |
| 4                                               | Is the load to be lifted within the crane/machine manufacturer's rated capacity in its present configuration?                                                                                                      |     |    |     |
| 5                                               | Are outriggers/stabilizers required and, if so, are they properly extended and down?                                                                                                                               |     |    |     |
| 6                                               | If outrigger/stabilizers are used, and the wheels are not off the ground is this the correct setup in accordance with the OEM?                                                                                     |     |    |     |
| 7                                               | Is the crane/machine level and on firm ground, or if the ground is not firm are adequate supporting materials provided?                                                                                            |     |    |     |
| 8                                               | If supporting materials are provided, is the entire surface of the outrigger/stabilizer pad supported and is the supporting material of sufficient strength to safely support the loaded outrigger/stabilizer pad? |     |    |     |
| 9                                               | If outriggers/stabilizers are not used, is the crane/machine rated for on-rubber lifts by the OEM's load chart?                                                                                                    |     |    |     |
| 10                                              | Is the swing radius of the crane counterweight clear of people and obstructions and are accessible areas within the swing area barricaded to prevent injury or damage?                                             |     |    |     |

Figure P-2 (1 of 3)

|    |                                                                                                                                                                                                                                             | YES | NO | N/A |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|-----|
| 11 | Is the Anti-two block safety device functional? When block is reconfigured has the device been retested to insure correct operation.                                                                                                        |     |    |     |
| 12 | Has the hook been centered over the load in such a manner to minimize swing?                                                                                                                                                                |     |    |     |
| 13 | Is the load well secured and balanced in the sling or lifting device after it is lifted a few inches for verification?                                                                                                                      |     |    |     |
| 14 | Is the lift and rotation path clear of obstructions?                                                                                                                                                                                        |     |    |     |
| 15 | If rotation of the load being lifted is hazardous, is a tagline or other restraint being used?                                                                                                                                              |     |    |     |
| 16 | Are personnel prevented from standing or passing under a suspended load?                                                                                                                                                                    |     |    |     |
| 17 | Is the operator paying full attention to the signal person?                                                                                                                                                                                 |     |    |     |
| 18 | Are proper signals being used? Is the operator responding properly to the signals? Are radios used for blind lifts?                                                                                                                         |     |    |     |
| 19 | Are empty hooks lashed or otherwise secured during travel to prevent swinging?                                                                                                                                                              |     |    |     |
| 20 | Does the operator remain at the controls while the load is suspended?                                                                                                                                                                       |     |    |     |
| 21 | Does the operator ensure that side loading is prohibited?                                                                                                                                                                                   |     |    |     |
| 22 | Are personnel prevented from riding on a load?                                                                                                                                                                                              |     |    |     |
| 23 | Are start and stop motions in a smooth fluid motion (no sudden acceleration or deceleration)?                                                                                                                                               |     |    |     |
| 24 | Is the lift a critical lift?                                                                                                                                                                                                                |     |    |     |
| 25 | If so, is a lift plan provided and understood and check-off sheets initialed and signed off?                                                                                                                                                |     |    |     |
| 26 | If overhead power lines are in the vicinity, is a critical lift plan provided addressing the requirements of 29 CFR 1926.1407-1411?                                                                                                         |     |    |     |
| 27 | If pick and carry operations are allowed and performed, are OEM directions followed (e.g. rotation lock engaged, boom centered over front or rear, etc.)?                                                                                   |     |    |     |
| 28 | When the crane/machine is left unattended, is it in a safe condition?                                                                                                                                                                       |     |    |     |
| 29 | Is rigging gear undamaged and acceptable for the application?                                                                                                                                                                               |     |    |     |
| 30 | Does rigging gear meet applicable ASME or host nation standards (e.g., ASME B30.9 for slings, B30.10 for hooks, B30.26 for rigging hardware such as shackles, safety hoist rings, and eyebolts, B30.20 for below the hook lifting devices)? |     |    |     |

Any Hazardous/Mission Critical Utilities in Excavation Area:

YES\_\_\_ NO\_\_\_ (if YES, ensure Excavator is briefed to include additional controls of Appendix B.)

Comments: \_\_\_\_\_

Any unknown utilities, anomalies (including increased risk of passive detection modes), or discrepancies noted by FSC Utility Locate in Part 3 have been discussed with Project Team and adequate risk mitigations are in place.

DSC or DSC Representative Approval for excavation. (\*See note below).

Signature/Date: \_\_\_\_\_

*DSC return a copy of the completed Form to NAVFAC CM/ET/DM or Shipyard Personnel Requesting the Utility Locate.*

*NAVFAC CM/ET/DM/Requestor ensure the Excavator is aware if any Plan Discrepancies were found, establish risk mitigations, and to use extreme caution when excavating.*

*If Plan Discrepancies are noted, the PWD DSC shall coordinate any Utility Plan Updates with PWD-ME GIS lead.*

*Note:*

*If work has not begun within 30 days from the Dig Safe Ticket approval date or if the excavation area expands beyond the original limits, the Excavator must renew the Dig Safe ticket by notifying DIG SAFE (1-888-344-7233) and the Contracting Officer. If the proposed excavation is not completed within 60 calendar days after obtaining the Dig Safe ticket, the ticket expires. Tickets should be renewed by calling DIG SAFE (as needed) at least 72 hours prior to expiration so there is always an active ticket. The utility locators (not 3rd Party) must be notified to mark out each time a ticket is renewed.*

*\*DSC approval does not waive the construction contractor's responsibility to perform a 3rd Party Locate (if specified by contract) prior to beginning excavation. The excavator is always responsible to ensure utilities are not damaged during excavation. DSC approval does not diminish or change that responsibility.*

## CONTRACTOR DIG-SAFE CERTIFICATION FORM

### **References:**

1. Government Safety Requirements (PWD ME) Section 01 35 26.00 22

**Project Title:** \_\_\_\_\_

**Prime Contractor:** \_\_\_\_\_

**Contract #:** \_\_\_\_\_

**Initial Dig-Safe Request #:** \_\_\_\_\_

### **A. Third Party Utility Location Certification**

In accordance with the Specification Section 01 35 26.00 22 Government Safety Requirements para 3.7.1, The Contractor must provide the services of a third party qualified independent utility locating company/person(s) (cannot be the Government's Utility Locating Firm) to positively identify underground utilities in the work area. The utility locating company shall indicate the utility type, size, and depth of all utilities within the proposed area of excavation including, but not limited to, voice/data, electrical, gas, water, air, sanitary sewer, and storm drainage. The third party independent locating firm is in addition to the PWD ME Dig Safe Process.

By signing below, the Contractor certifies that the Third Party Utility Locate Company has complete a review of the excavation area.

**Third Party Utility Locate Company:** \_\_\_\_\_

**Date Utility Locate was completed:** \_\_\_\_\_

**Print Name of the Utility Locator:** \_\_\_\_\_

**Utility Locator Signature/Date:** \_\_\_\_\_

**Any Discrepancies Found with the Marked Utilities (Yes/No):** Yes \_\_\_\_\_ No \_\_\_\_\_

(If Yes, notify the Contracting Officer Immediately)

**Prime Contractor Signature/Date:** \_\_\_\_\_

**Public Works Department, Maine**

## **CONTRACTOR DIG-SAFE CERTIFICATION FORM**

### **B. Prime Contractor Utility Location Certification**

Prime Contractor has performed a review of the following documents to ensure a comprehensive understanding of the sub-surface area to be excavated.

- Government's Dig-Safe report and associated drawings.
- Independent 3rd party Dig-Safe report and associated drawings.
- Project Contract drawings
- Government Total Map of approximate existing utility locations.

Prior to proceeding with excavation the prime contractor has the responsibility to access associated documentation of all items listed above and to mitigate the risk of a potential utility strike.

The final risk assessment shall be identified in the Contractor AHA and reviewed with the Contracting Officers Rep. Also, any hazardous/mission critical utilities identified by the DSC or plans, are covered in the Contractors AHA's and pre-job Safety Briefs prior to commencing excavation.

**By signing below, the Contractor certifies the above documentation has been thoroughly reviewed and evaluated for inconsistencies, anomalies, and stated inadequacies, and the prime contractor has risk mitigation actions planned to ensure excavation does not damage underground utilities.**

**Prime Contractor Signature/date; \_\_\_\_\_**

Public Works Department, Maine

Form Revision Date 4/04/23

Attachment D

**CONTRACTOR UTILITY LOCATE – PRE-EXCAVATION SAFETY  
CHECKLIST**

Project Title: \_\_\_\_\_

Prime Contractor: \_\_\_\_\_

Contract No.: \_\_\_\_\_

Excavator: \_\_\_\_\_

Initial \_\_\_\_\_ Gov't and Utility (if listed in Part 1 Appendix A) Dig Safe Markings Completed & Visible in the field.

Initial \_\_\_\_\_ NAVFAC Dig Safe Utility Locate Request Form returned from DSC and any Noted Discrepancies are Resolved and risks mitigated.

Initial \_\_\_\_\_ Contractor's Independent Third Party Utility Locate Completed and any discrepancies are resolved with NAVFAC (Attach Third Party Certification Form).

**Are Hazardous or Mission Critical Utilities identified in the excavation area (as identified by DSC or plans)?:** Yes \_\_\_\_\_ or No: \_\_\_\_\_  
If Yes complete the following:

\_\_\_\_\_ The Contractor must supplement daily Dig Safe procedures to include an additional checkoff on Contractor Daily Activity Plan ensuring all utilities have been clearly marked and reviewed with the SSHO.

\_\_\_\_\_ The Contractor must have a Dig Safe laminated utility color coding system posted in or near all heavy digging equipment for easy reference to type of utility.

\_\_\_\_\_ The SSHO must complete a pre-excavation walk as part of the morning procedure to ensure all known utilities are identified and markings are refreshed with the appropriate color-coded paint.

\_\_\_\_\_ Contractor must provide additional danger signage, to mark areas of known live underground utilities.

\_\_\_\_\_ Contractor must ensure a 'spotter' accompanies the equipment operator during excavation work.

\_\_\_\_\_ Contractor must provide Construction CM/ET notification no later than 7 working days prior to the preparatory and initial pre-excavation/ demo safety review meeting. (The CM/ET and the DSC will attend this meeting to ensure safety and preservation of Critical Utilities is discussed with adequate focus.)

\_\_\_\_\_ The Contractor must confirm & identify the closest utility isolation points & develop mitigation strategies with the utility owner (Coordinate with the DSC) to ensure the safe excavation adjacent to these utilities. Utility Outages to isolate utility systems may need to be considered in circumstances where the excavation work cannot be completed safely.

**\*NOTE: The Hazardous or Mission Critical Utility requirements listed above are in addition to, and do not replace other requirements. ALL UTILITIES require hand excavation using wood or fiberglass tools when work is expected to come within 3' of the utility, per contract (Div 1 Specs, General Notes, Excavation specs).**

|     |    |     | Program Manager contacted if atmosphere is above established limits. Source of contaminant to be determined and eliminated prior to entry or Program Manager will establish special procedures for entry. |

### Emergency Procedures for Trench Cave-Ins

- **GET ALL OTHER EMPLOYEES OUT OF THE TRENCH!!**
- **CALL 438-2333**
- **NOTIFY COMPETENT PERSON**
- **Note time**
- **Note location of trapped worker(s)**
- **Leave all victims hand tools in place**
- **Shut down all heavy equipment**
- **Stop nearby traffic that may cause vibration**
- **Keep everyone back from trench at least 50 feet**
- **Gather information for rescue team**
- **WAIT for rescue team. Do not attempt to rescue.**

*Note-Do not attempt to dig the person out using hand tools or heavy equipment. This could cause the trench to collapse further and could cause further injuries!!!!*

\_\_\_\_\_
- g. Prime Contractor company name: \_\_\_\_\_
- h. Excavator company name: \_\_\_\_\_
- i. Project ET: \_\_\_\_\_
- j. PWD Locate Request Form Revision date used: \_\_\_\_/\_\_\_\_/\_\_\_\_ (Attach a completed copy)
- k. Is this identified as a Hazardous/Mission Critical utility on Part 4 of the Dig Safe Request Form? Yes: \_\_\_\_\_, No: \_\_\_\_\_

**2. Utility Locate Information:**

**a. Dig Safe Locate Ticket;**

- i. Original Dig Safe Ticket #: \_\_\_\_\_ and date pulled: \_\_\_\_\_
- ii. Latest date Dig Safe Ticket was renewed: \_\_\_\_\_ N/A: \_\_\_\_\_
- iii. Date of latest FSC Utility Locate markings in excavation area: \_\_\_\_\_
- iv. Was Prime Contractor maintaining visible markings? Yes: \_\_\_\_\_, No: \_\_\_\_\_
- v. Was the impacted utility currently marked where it was struck? Yes: \_\_\_\_\_
  - 1. If not, describe situation: \_\_\_\_\_  
\_\_\_\_\_
- vi. Did FSC Utility Locate KTR flag anomalies or discrepancies on Field notes that apply to this utility? (Attach FSC Locate sketch and field notes) Yes: \_\_\_\_\_, No: \_\_\_\_\_
  - 1. Was DSC involved in resolution of anomalies or discrepancies? Yes: \_\_\_\_\_, or why not? \_\_\_\_\_
  - 2. Was there a post FSC Locate Tailgate discussion? Yes: \_\_\_\_\_, or why not? \_\_\_\_\_  
\_\_\_\_\_

### Public Works Department, Maine

3. Did Prime Contractor attempt to mitigate utility impact risk from anomalies or discrepancies? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
Describe how, or why not (include separate sheet if needed): \_\_\_\_\_  
\_\_\_\_\_

- vii. Did PWD ME Dig Safe Coordinator approve excavation on Utility Locate Request Form Part 4: Yes: \_\_\_\_\_, or why not? \_\_\_\_\_

**b. 3<sup>rd</sup> Party Utility Locate Information:**

- i. 3rd Party Locate Company: \_\_\_\_\_  
ii. Date of the 3rd Party Locate: \_\_\_\_/\_\_\_\_/\_\_\_\_  
iii. Did the 3rd Party flag anomalies or discrepancies on field notes that apply to this utility? (Attach 3<sup>rd</sup> Party Locate sketch and field notes) Yes: \_\_\_\_\_, No: \_\_\_\_\_  
1. Was DSC involved in resolution of anomalies or discrepancies? Yes: \_\_\_\_\_, or why not? \_\_\_\_\_  
2. Was there a post 3rd Party Tailgate discussion? Yes: \_\_\_\_\_, or why not? \_\_\_\_\_

Did Prime Contractor attempt to mitigate utility impact risk from anomalies or discrepancies? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
Describe how, or why not (include separate sheet if needed): \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

- iv. Did Prime Contractor complete the Contractor Dig Safe Certification Form prior to excavation? (attach completed copy): Yes: \_\_\_\_\_, or why not? \_\_\_\_\_  
\_\_\_\_\_

**3. Preparatory & Initial Meetings Information:**

- a. Date of the Preparatory Meeting: \_\_\_\_/\_\_\_\_/\_\_\_\_  
b. Did PWD DSC attend the Preparatory meeting? Yes: \_\_\_\_\_ or why not? \_\_\_\_\_  
c. Were Haz/Mission Critical Utilities reviewed at the meeting? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
d. Did PWD UEM personnel attend the meeting? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
e. Were the Utility Markings in the field reviewed? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
f. Were FSC and 3<sup>rd</sup> Party Identified discrepancies or anomalies noted and discussed? Yes: \_\_\_\_\_, If No, why not? \_\_\_\_\_  
g. Date of the Initial Meeting: \_\_\_\_\_  
h. Were Utility Risk Mitigation Strategies reviewed (attach minutes): Yes: \_\_\_\_\_, if No, why not? \_\_\_\_\_  
i. Were Utility Outages part of the Risk Mitigation Plan? Yes: \_\_\_\_\_, No: \_\_\_\_\_  
j. Was excavation performed with expected precaution? Yes: \_\_\_\_\_, No: \_\_\_\_\_

**Public Works Department, Maine**

**4. Utility Mapping Review (DSC input):**

- a. Did the FSC Dig Safe KTR have the latest Total Map? (Explain): Yes: \_\_\_\_\_, No: \_\_\_\_\_

\_\_\_\_\_

- b. Were inaccuracies between the field conditions & the Total Map found? Explain;  
Yes: \_\_\_\_\_, No: \_\_\_\_\_, \_\_\_\_\_

\_\_\_\_\_

- c. If Total Map inaccuracies were identified for this area, has CAD updated for most  
current As-Built Info? Yes: \_\_\_\_\_, No: \_\_\_\_\_

- d. Was digging within 3' of marked utility? Yes: \_\_\_\_\_, No: \_\_\_\_\_

**5. Items to submit along with this Review Checklist:**

- a. \_\_\_\_\_ A copy of the Dig Safe Ticket.  
b. \_\_\_\_\_ Diagram/sketch of the area with specific location of the strike.  
c. \_\_\_\_\_ Appropriate Contractor's Daily Work Notes.  
d. \_\_\_\_\_ FSC Dig Safe Locate Report (sketch and field notes).  
e. \_\_\_\_\_ 3<sup>rd</sup> Party Locate Report (sketch and field notes).  
f. \_\_\_\_\_ Statement from Equipment Operator.  
g. \_\_\_\_\_ Preparatory Meeting Minutes.  
h. \_\_\_\_\_ Initial Meeting Minutes.

**6. Project Specific Comments:**

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**7. What could be done better?**

a.

b.

c.

**8. Lessons Learned:**

a.

b.

c.

**Public Works Department, Maine**

**ATTACHMENTS FOR DETAILS AND EXPLANATIONS AS NEEDED**

# The Color Coding System

Color coded paint or flags are used to identify the type of underground facilities.

SECTION 01 42 00

SOURCES FOR REFERENCE PUBLICATIONS

02/19

PART 1 GENERAL

1.1 REFERENCES

Various publications are referenced in other sections of the specifications to establish requirements for the work. These references are identified in each section by document number, date and title. The document number used in the citation is the number assigned by the standards producing organization (e.g., ASTM B564 Standard Specification for Nickel Alloy Forgings). However, when the standards producing organization has not assigned a number to a document, an identifying number has been assigned for reference purposes.

1.2 ORDERING INFORMATION

The addresses of the standards publishing organizations whose documents are referenced in other sections of these specifications are listed below, and if the source of the publications is different from the address of the sponsoring organization, that information is also provided.

SECTION 01 44 00.00 22

ARCHAEOLOGICAL MONITORING (PWD ME)  
04/25

PART 1 GENERAL

This Section applies to Design-Bid-Build and Design-Build projects at the Portsmouth Naval Shipyard and at PWD ME AOR Facilities.

1.1 SUMMARY

Perform archaeological monitoring for all forms of soil disturbing activities and excavations within archaeologically sensitive portions of the project area **as identified in the project drawings**. Work must include but is not limited to: background research and review of previous surveys, monitoring during excavation, installation of components, regrading, and other work indicated or specified. Results of monitoring efforts must be summarized in Archaeological Monitoring Reports, including progress reports, a draft monitoring report, a final draft monitoring report, and a final monitoring report. Artifacts collected during monitoring efforts must be catalogued and curated.

The Government will provide available existing documentation pertaining to the project area, which will include previous investigations, plans, photographs, and research.

1.2 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

36 CFR 79 (2022) Curation of Federally Owned or Administered Archeological Collections

36 CFR 61 (2017) Procedures for State, Tribal, and Local Government Historic Preservation Programs

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. The following shall be submitted in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Archaeologist Qualifications; G

Archaeological Coordinator Designation Letter

Archaeological Monitoring Plan; G

## SD-06 Test Reports

Archaeological Resource Report; G

Monthly Progress Reports; G

Archaeological Monitoring Report - Draft; G

Archaeological Monitoring Report - Final Draft; G

Archaeological Monitoring Report - Final; G

Curated Artifacts (if collected); G

### 1.4 QUALITY ASSURANCE

The Contractor must submit Archaeologist Qualifications prior to submission of the Archaeological Monitoring Plan. The Archaeologist Qualifications must be approved by the Government, in accordance with the procedures of Section 01 33 00 SUBMITTAL PROCEDURES, prior to the Archaeological Coordination Meeting and submission of the Archaeological Monitoring Plan. The Archaeologist must meet the Secretary of the Interior's Professional Qualification Standards for Archaeologist as outlined in 36 CFR 61 as required by the National Historic Preservation Act (Section 112, a, 1, A), OPNAVIST 5090.1E (Section 13-3.6), and the Principal Investigator must be an approved Archaeologist on the Maine Historic Preservation Commission's Level II Approved List. Field staff do not need to be named on the Level II list if they are supervised by an archaeologist with those qualifications.

The Archaeologist must specialize in historic archaeology and have experience monitoring construction work in urban or industrial archaeological settings, and have demonstrated experience in recognizing 18th and 19th century burials. The Archaeologist must have a demonstrated track record of success in carrying projects to completion, including the submission of all final project documentation and curated artifacts.

### 1.5 COORDINATION

The Contractor shall designate in writing, with an Archaeological Coordinator Designation Letter, the Archaeological Coordinator responsible for coordination with the archaeological subcontractor. This individual must have a thorough understanding of the project schedule. The Contractor shall notify Contracting Officer of any changes in the Archaeological Coordinator in writing.

The Contractor is responsible for obtaining permission and clearance from the Contracting Officer to enter areas of the required fieldwork.

#### 1.5.1 ARCHAEOLOGICAL COORDINATION MEETING

Prior to the start of any ground disturbing/excavation work and prior to submission of the Archaeological Monitoring Plan, the Archaeological Coordinator, project archaeologist, Contractor's QC Manager, PWD ME CM/ET and PWD-ME Cultural Resources Manager must meet at an Archaeological Coordination Meeting to review the proposed scope of work, establish a protocol for artifact collection, and review the relevant documentation.

The Contractor is responsible for recording minutes of all meetings and

furnishing a copy of the minutes to the Contracting Officer within 3 calendar days of the meeting.

For projects with a duration exceeding one year, re-initial archaeological coordination meetings must be held on an annual basis to ensure continued alignment on archaeological protocols. In addition, a re-initial archaeological coordination meeting must be held should there be a change in key personnel (Archaeological Subcontractor; Archaeological Coordinator; QC Manager, Project Superintendent, Project Manager, etc.)

#### 1.6 ARCHAEOLOGICAL MONITORING PLAN

The Contractor must submit an Archaeological Monitoring Plan prior to the start of construction. The monitoring plan shall be informed by the discussions held at the Archaeological Coordination Meeting and must include:

- a. Identification of the areas to be monitored. Provide supporting graphics.
- b. A description of anticipated or potential resources within the project area, including anticipated locations. Provide supporting graphics.
- c. A description of field methods appropriate to the project including but not limited to mapping/GPS data collection methods, photography, night-work protocols, dewatering protocols, working within Installation Restoration (IR) Sites, human remains discovery protocols, and procedures for encountering potential UXO.
- d. Project-specific discovery protocols as approved through consultation and as discussed at the Archaeological Coordination Meeting. Include protocols for chain of communication.
- e. Artifact collection/discard methods.
- f. Reporting requirements.
- g. Curation requirements and anticipated repository.
- h. Archaeologist Qualifications, including experience related to urban or industrial archaeological settings and in recognizing 18th and 19th century burials. These qualifications must have been approved prior to submission of the Archaeological Monitoring Plan, as outlined in Paragraph QUALITY ASSURANCE.
- i. Points of contact.

#### PART 2 PRODUCTS

Not used.

#### PART 3 EXECUTION

##### 3.1 INSPECTION AND MONITORING

- a. The Archaeologist must observe excavation activities for archaeological resources and shall be authorized to collect archaeological material as warranted for analysis. The Archaeologist must be present on the project site according to a schedule agreed

upon by the Contracting Officer until the Contracting Officer agrees that the project construction activities could have no effects on significant archaeological resources.

- b. The Archaeologist must advise all project Contractors to be on the alert for evidence of the presence of the expected resource(s), of how to identify the evidence of the expected resource(s), and of the appropriate protocol in the event of an archaeological resource discovery. GPS points, photographs, sketch maps, and measured drawings must be provided, as applicable, to document resources encountered during the course of excavations.
- c. If an intact archaeological resource is encountered, all soil disturbing activities in the vicinity of the resource must cease. The Archaeologist must be empowered to halt excavation in the area and must immediately notify the Archaeological Coordinator (who must then notify the Contracting Officer) of the encountered archaeological resource. The Archaeologist must, after making a reasonable effort to assess the identity, integrity, and significance of the encountered archaeological resource, present the findings of this assessment to the Contracting Officer. Following verbal communication of this information, the assessment must be formalized in an Archaeological Resource Report.
- d. If suspected human remains (including but not limited to: bone, bone fragments, teeth, mummified flesh, burials, and cremations) are encountered, stop work in the surrounding area immediately and notify the Contracting Officer and PWD-ME ENV. The remains shall be treated with respect and not be disturbed or photographed. In coordination with the Contracting Officer and PWD-ME ENV, provide the materials and labor necessary to secure the area to prevent damage and protect the discovery.
- e. In the event that potential munitions of explosive concern are identified (i.e., cannonballs, mortars, bullets, etc.), the Archaeologist must immediately halt excavation in the area. The Archaeological Coordinator must immediately notify Security Dispatch, and then notify the Contracting Officer. The Contractor shall vacate the area to a safe distance. The Contractor shall not resume work in the area until directed by the Government.
- f. The Contractor must be responsible for the safety of all work conducted and must ensure that the work area is safe during archaeological investigations. This includes providing appropriate shoring, access, and egress routes, dewatering, and any needed equipment. No one will be expected to enter the excavation until it has been deemed safe. It will be the responsibility of the Contractor to ensure that the archaeological monitors have the ability to enter the excavation as needed.
- g. The Contractor may be performing work at night. When working at night, the Contractor must provide adequate and ample light to allow the monitoring archaeologists the ability to successfully monitor the area for archaeological resources. Lighting provided must be sufficient to illustrate changes in soil type/color, stratigraphy, and to identify/document artifacts and features. If adequate lighting cannot be provided, or if the sensitivity of resources warrant, nighttime work cannot occur within those areas. Refer to Section 01 14 00.00 22 WORK RESTRICTIONS (PWD ME) for additional information on where

nighttime work is not permitted.

- h. The Archaeologist must document the resource(s) encountered with photographs (including scale), mapping, measured drawings, collection of GPS points, written description of the resource; and collect artifacts, as appropriate for further analysis.
- i. If a potentially significant resource is encountered, summarize the results of the archaeological investigations in Archaeological Resource Report. The Archaeologist, in coordination with the Contractor, must produce the Resource Report to include a map and written summary of the discovery to support PWD ME coordination with SHPO. The Report must include, at a minimum, a physical description of the resource and its context; the depth at which it was encountered; potential resource identification; a description of the proposed impacts to the resource; and recommended follow-on steps, including options to avoid or minimize impacts on the potential site. The Resource Report must be submitted to the Contracting Officer no later than 2 business days after the potentially significant resource is encountered.

### 3.2 ARCHAEOLOGICAL MONITORING REPORTS

Record findings of the archaeological monitoring efforts in written reports at required intervals, as outlined herein, and with sufficient information. Reports shall always include a combination of narratives and graphics. The Contractor is required to prepare and submit all data, reports, graphics, maps, charts, etc. in an electronic format consistent with the platform currently used by the PWD ME Cultural Resources GIS database. Details and requirements will be provided to the Contractor by the Contracting Officer upon award of this Contract. The report must include a recommendation for the future treatment of archaeological resources encountered during construction that were left in place.

#### 3.2.1 Overall Report Requirements:

Upon the completion of ground disturbing work, the archaeological monitoring effort must be documented in a comprehensive monitoring report. The report must adhere to the industry standards and the Maine SHPO's Archaeological Survey Guidelines and the State Historic Preservation Officer's Standards for Archaeological Work in Maine. The report must summarize the monitoring work, resources encountered, and document their disposition. For resources left in place at the conclusion of construction, the report must include recommendations for future treatment. The report shall include graphics including photographs, measured drawings, and maps (created by GPS points and showing the location(s) of any resources documented, including those resources left in situ).

Contracting Officer review of all monitoring report submissions will be completed within 60 calendar days after the date of submission.

#### 3.2.2 Report Iterations:

- a. Monthly Progress Reports: Provide a brief monthly progress report consisting of a table indicating the dates of archaeological monitoring activities, the names of the archaeological monitors on site each day, and a summary of resources encountered/not encountered. The dates shall be keyed to an accompanying map showing

the areas monitored.

- b. Archaeological Monitoring Report - Draft: Provide one (1) hard copy and one (1) electronic copy of a draft report (99 percent complete) for review by the Government. Once the draft report has been reviewed by the Government, the Contractor must be notified of any recommended changes in a timely manner by the Contracting Officer. Production of the final draft report must be within thirty (30) business days of receipt of the Government comments.
- c. Archaeological Monitoring Report - Final Draft: Provide two (2) hard copies and one (1) electronic copy of the final draft report for review by the Government and Maine SHPO. The final draft report must be completed in accordance with current State of Maine archaeological survey requirements. Draft GIS data must also be provided at this time.
- d. Archaeological Monitoring Report - Final: Once the final draft report has been reviewed by the SHPO, the Contractor must be notified of any recommended changes in a timely manner by the Contracting Officer. Production of three (3) hard copies and three (3) electronic copies of the final reports must be within thirty (40) business days of receipt of the Government comments.

The Contractor must submit all informal documents regarding archaeological field site reconnaissance and archaeological site mapping (field notes, etc.) directly to the Contracting Officer. Upon request or after acceptance of the final report, all field notes, photographs, artifacts, and related data will be turned over to the Contracting Officer.

The Contractor must submit all documentation in editable electronic format (Microsoft Word, Excel, ESRI ArcINFO, etc.) and in PDF upon completion of work. Three (3) hard copies and three (3) electronic copies of the report must also be submitted upon completion and acceptance of work. The electronic copies must be submitted on DVDs or CDs.

### 3.3 ARTIFACT CURATION

Artifacts recovered during the monitoring effort must be cleaned, recorded, and curated in accordance with 36 CFR 79. The Archaeologist must identify a repository for permanent curation and pay initial curation fees. If no suitable repository is identified, curated artifacts must be provided to the Government with the Archaeological Monitoring Report - Final submission.

1.2 PAYMENT

Separate payment will not be made for providing and maintaining an effective Quality Control program. Include all associated costs in the applicable Schedule item.

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Contractor Quality Control (CQC) Plan; G

SD-06 Test Reports

Verification Statement

Contractor Quality Control Reports

Contractor Production Reports

Preparatory Phase Checklists

Initial Phase Checklists

Testing Plan And Log

Rework Items List

SD-07 Certificates

Certificate Of Readiness

1.4 GENERAL REQUIREMENTS

Establish and maintain an effective quality control (QC) system that complies with FAR 52.246-12 Inspection of Construction. QC is comprised of plans, procedures, and organization necessary to produce an end product that complies with the Contract requirements. The QC system covers all construction operations, both onsite and offsite, and must be keyed to the proposed construction sequence. The Quality Control Manager, Superintendent, Project Manager, Site Safety and Health Officer (SSHO), and all on-site supervisors are responsible for the quality of work and are subject to removal by the Contracting Officer for non-compliance with the quality requirements specified in the Contract. The Quality Control Manager must maintain a physical presence at the work site at all times and is the primary individual responsible for all quality control.

1.5 QUALITY CONTROL (QC) PROGRAM REQUIREMENTS

Establish and maintain a QC program as described in this Section. This QC program is a key element in meeting the objectives of NAVFAC Commissioning. The QC program consists of a QC Organization, CQC Plan, a Coordination and Mutual Understanding Meeting, Weekly QC Meetings, three phases of control, submittal review and approval, historic coordination drawings review and approval, testing, completion inspections, QC certifications, independent Special Inspections in accordance with Section 01 45 35 SPECIAL INSPECTIONS, and documentation necessary to provide materials, equipment, workmanship, fabrication, construction and operations which comply with the requirements of this Contract. The QC program must cover on-site and off-site work and be keyed to the work sequence. No construction work or testing may be performed unless the QC Manager is on the work site.

The QC Manager must report to an officer of the firm and not be subordinate to the Project Superintendent, or the Project Manager. The QC Manager must be a direct employee of the Prime Contractor, not an employee of a subcontractor. The QC Manager, Project Superintendent, and Project Manager must work together effectively. Although the QC Manager is the

primary individual responsible for quality control, all individuals will be held responsible for the quality of work on the job.

#### 1.5.1 Meetings

##### 1.5.1.1 Coordination and Mutual Understanding Meeting

Before start of construction, prior to acceptance by the Government of the CQC Plan, and within 21 calendar days from receiving the Notice to Proceed, meet with the Contracting Officer and discuss the Contractor's quality control system. During the meeting, a mutual understanding of the system details must be developed, including the forms for recording the CQC operations, control activities, testing, administration of the system for both onsite and offsite work, and the interrelationship of Contractor's management and control with the Government's Quality Assurance. Minutes of the meeting will be prepared by the QC Manager and signed by the Contractor and the Government. The Contractor shall provide a copy of the signed minutes to all attendees. At a minimum the Coordination and Mutual Understanding Meeting must be repeated when a new QC Manager is appointed. There can be other occasions when subsequent conferences will be called by either party to reconfirm mutual understandings or address deficiencies in the CQC system or procedures which can require corrective action by the Contractor.

##### 1.5.1.1.1 Purpose

The purpose of this meeting is to develop a mutual understanding of the QC details, including documentation, administration for on-site and off-site work, design intent, commissioning in accordance with Section 01 91 00.15 20 TOTAL BUILDING COMMISSIONING, environmental requirements and procedures, coordination of activities to be performed, Special Inspections, and the coordination of the Contractor's management, production, and QC personnel. At the meeting, the Contractor must explain in detail how three phases of control will be implemented for each DFO, as well as how each DFO will be affected by each management plan or requirement as listed below:

- a. Waste Management Plan.
- b. Procedures for noise and acoustics management.
- c. Environmental Management Plan.
- d. Environmental regulatory requirements.
- e. Commissioning Plan requirements in accordance with Section 01 91 00.15 20 TOTAL BUILDING COMMISSIONING.
- f. Special Inspections.
- g. Indoor Air Quality (IAQ) Management Plan

##### 1.5.1.1.2 Coordination of Activities

Coordinate activities included in various sections to assure efficient and orderly installation of each component. Coordinate operations included under different sections that are dependent on each other for proper installation and operation. Schedule construction operations with consideration for indoor air quality as specified in the IAQ Management

Plan. Coordinate prefunctional tests and startup testing with the Commissioning Provider (Cx). Coordinate special inspections.

#### 1.5.1.1.3 Attendees

As a minimum, the Contractor's personnel required to attend include an officer of the firm, the Project Manager, Project Superintendent, QC Manager, Alternate QC Manager, QC Specialists, Special Inspector, Special Inspector of Record, Commissioning Provider (Cx), Environmental Manager, and subcontractor representatives. Each subcontractor who will be assigned QC responsibilities must have a principal of the firm at the meeting.

#### 1.5.1.2 Weekly Quality Control (QC) Meetings

After the start of construction, the QC Manager shall conduct Weekly QC Meetings at the work site with at least the following Contractor personnel in attendance: Project Superintendent, Project Manager, Assistant QC Manager, QC Specialists, Special Inspector, Special Inspector of Record, Cx, and the foremen who are performing the work of the DFOWs. The QC Manager must prepare an agenda and provide a copy to the Contracting Officer no later than two (2) working days before the meeting. The QC Manager must prepare the minutes of the meeting and provide a copy to the Contracting Officer within two (2) working days after the meeting. The Contracting Officer may attend these meetings. At a minimum, accomplish the following at each meeting:

- a. Review the minutes of the previous meeting.
- b. Review the schedule and the status of work and deficiencies/rework. Review the most current approved schedule (in accordance with schedule specification) and the status of work and deficiencies/rework.
- c. Review the status of submittals and Request for Information (RFIs).
- d. Review the work to be accomplished in the next 3 weeks as defined by the schedule section paragraph THREE-WEEK LOOK AHEAD SCHEDULE in Section 01 32 17.00 20 COST-LOADED NETWORK ANALYSIS SCHEDULES (NAS) and all documentation required for that work.
- e. Review Testing Plan and Log including status of tests performed since last QC Meeting.
- f. Resolve QC and production problems. Discuss status of pending change orders.
- g. Address items that may require revising the CQC Plan.
- h. Review Accident Prevention Plan (APP) and effectiveness of the safety program.
- i. Review environmental requirements and procedures.
- j. Review Environmental Management Plan.
- k. Review Waste Management Plan.
- l. Review the status of training completion.

- m. Review Cx Plan and progress. Review Issues Log and resolution.
- n. Review IAQ Management Plan

#### 1.5.2 Contractor Quality Control (CQC) Plan

Submit no later than 30 calendar days from receiving the Notice to Proceed the CQC Plan proposed to implement the requirements FAR 52.246-12 Inspection of Construction. Construction will be permitted to begin only after acceptance of the CQC Plan and other Contract requirements.

##### 1.5.2.1 Content of Contractor Quality Control (CQC) Plan

Provide a CQC Plan, prior to start of construction that includes a table of contents with major sections identified, pages numbered sequentially, and that documents the proposed methods and responsibilities for accomplishing quality control during the construction of the project. The CQC Plan must at a minimum include the following sections:

- a. A description of the quality control organization and acknowledgment that the CQC staff will implement the three phase control system for all aspects of the work specified.
- b. An organizational chart showing the quality control organization with individual names and job titles and lines of authority up to an executive of the company at the home office.
- c. NAMES AND QUALIFICATIONS: Names and qualifications, in resume format, (including position titles and durations for qualifying experiences) for each person in the QC organization. Include the Construction Quality Management (CQM) for Contractors course certifications for the QC personnel as required by the paragraphs entitled CONSTRUCTION QUALITY MANAGEMENT TRAINING.
- d. DUTIES, RESPONSIBILITY AND AUTHORITY OF QC PERSONNEL: Duties, responsibilities, and authorities of each person in the QC organization.
- e. OUTSIDE ORGANIZATIONS: A listing of outside organizations, such as architectural and consulting engineering firms, that will be employed by the Contractor and a description of the services these firms will provide. Example: The fire protection engineer who designs the sprinkler system.
- f. APPOINTMENT LETTERS: Letters signed by an officer of the firm appointing the QC Manager and Alternate QC Manager, CxC, and stating that they are responsible for implementing and managing the QC program as described in this Contract. Include in this letter the responsibility of the QC Manager and Alternate QC Manager to implement and manage the three phases of control, and their authority to stop work which is not in compliance with the Contract. Letters of direction are to be issued by the QC Manager to all other QC Specialists outlining their duties, authorities, and responsibilities. Include copies of the letters in the QC Plan.
- g. SUBMITTAL PROCEDURES AND INITIAL SUBMITTAL REGISTER: Procedures for reviewing, approving, scheduling, and managing submittals, including those of subcontractors, offsite fabricators, suppliers, and purchasing agents. Provide the name(s) of the person(s) in the QC

organization authorized to review and certify submittals prior to approval. Provide the initial submittal of the Submittal Register as specified in Section 01 33 00 SUBMITTAL PROCEDURES.

- h. TESTING LABORATORY INFORMATION: Testing laboratory information required by the paragraph ACCREDITATION REQUIREMENTS, as applicable.
- i. TESTING PLAN AND LOG: A Testing Plan and Log that includes the tests required, associated feature of work required, referenced by the specification paragraph number requiring the test, the frequency, and the person responsible for each test. Use Government forms to log and track tests.
- j. Procedures to complete construction deficiencies from identification through acceptable corrective action. Establish verification procedures that identified deficiencies have been corrected. This phase is performed prior to beginning work on each definable feature of work, after all required plans, documents, materials are approved, and after copies are at the work site.
- k. Reporting procedures, included proposed reporting formats.
- l. Procedures for submitting and reviewing design changes/variations prior to submission to the Contracting Officer.
- m. LIST OF DEFINABLE FEATURES: A Definable Feature of Work (DFOW) is a task that is separate and distinct from other tasks and has control requirements and work crews unique to that task. A DFOW is identified by different trades or disciplines, or it is work by the same trade in a different environment. A DFOW is by definition any item or activity on the construction schedule, and the schedule specification provides direction regarding how the DFOWs are to be structured. Include in the list of DFOWs for all activities on the Construction Schedule. Although each section of the specifications can generally be considered a definable feature of work, there are frequently more than one definable feature under a particular section. Identify the specification section number and schedule activity ID for each DFOW listed. The DFOW list will be reviewed in coordination with the construction schedule and agreed upon during the Coordination of Mutual Understanding Meeting.
- n. PROCEDURES FOR PERFORMING AND TRACKING THE THREE PHASES OF CONTROL: Identify procedures used to ensure the three phases of control to manage the quality on this project. For each Definable Feature of Work (DFOW), a Preparatory and Initial phase checklist must be filled out during the Preparatory and Initial phase meetings. Conduct the Preparatory and Initial Phases and meetings with a view towards obtaining quality construction by planning ahead and identifying potential problems for each DFOW.
- o. Coordinate scheduled work with Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections, and the Special Inspections Project Manual. Where the applicable code issued by the International Code Council (ICC) calls for inspection by the Building Official, the Contractor must include the inspections in the Quality Control Plan and must perform the inspections required by the applicable ICC. The Contractor must perform these inspections using independent qualified inspectors. Include the Special Inspection Project Manual requirements in the CQC Plan.

p. DAILY CONTRACTOR QUALITY CONTROL REPORT FORM: Template that includes fields for the following (the Contractor may request a template from the Contracting Officer):

- 1) Date.
- 2) Sequential report number.
- 3) Weather and temperature.
- 4) Number of personnel on site by trade or by Subcontract.
- 5) Kind and number of major equipment on site.
- 6) Tests performed and their results, if known.
- 7) Materials and equipment delivered to the site and their conditions.
- 8) Names, affiliations, and positions of visitors to the site with brief explanations of the reasons for visits.
- 9) Brief description of each work activity, noting items that were completed that day.
- 10) Items of work that need attention at a later date, and why.
- 11) Any accidents and injuries.
- 12) Items of concern with respect to maintenance of quality.
- 13) Accounting update of unit price items specified in the Price Schedule utilizing the numbering convention indicated in the Unit Prices Form (e.g., 0001g).
- 14) Any other items of significance.

#### 1.5.3 Acceptance of the Contractor Quality Control (CQC) Plan

The Contracting Officer's acceptance of the CQC Plan is required prior to the start of construction. The Contracting Officer reserves the right to require changes in the QC Plan and operations as necessary, including removal or addition of personnel, to ensure the specified quality of work. The Contracting Officer reserves the right to interview any member of the QC organization at any time in order to verify the submitted qualifications. All QC organization personnel are subject to acceptance by the Contracting Officer. The Contracting Officer may require the removal of any individual for non-compliance with quality requirements specified in the Contract. The removal and replacement of QC organization personnel will not be cause for claim of additional compensation or extensions of the Contract Completion Date (CCD).

#### 1.5.4 Preliminary Construction Work Authorized Prior to Acceptance

The only construction work that is authorized to proceed prior to the acceptance of the CQC Plan is mobilization of storage and office trailers, temporary utilities, and surveying with specific prior approval of the Contracting Officer.

#### 1.5.5 Notification of Changes

Notify the Contracting Officer, in writing, of any proposed changes in the CQC Plan or changes to the QC organization personnel, in accordance with the submittal requirements in Section 01 33 00 SUBMITTAL PROCEDURES. Proposed changes are subject to acceptance by the Contracting Officer.

#### 1.5.6 Special Inspections

Perform all required Special Inspections per Section 01 45 35 SPECIAL INSPECTIONS, the statement of Special Inspections and the Schedule of Special Inspections.

## 1.6 QUALITY CONTROL (QC) ORGANIZATION

### 1.6.1 Quality Control (QC) Manager

#### 1.6.1.1 Duties

Provide a QC Manager at the Project site to implement and manage the QC program. "Project Site" is the specific area of construction within the limits of work as defined by the contract documents. The QC Manager must not perform the duties of Project Superintendent, nor the duties of Project Manager, or SSHO. The only duties and responsibilities of the QC Manager are to manage and implement the QC program on this Contract. The QC Manager must attend the partnering meetings, Coordination and Mutual Understanding Meeting, conduct the Weekly QC Meetings, perform the three phases of control except for those phases of control designated to be performed by QC Specialists, perform submittal review and approval, ensure testing is performed, and provide QC certifications and documentation required in this Contract. The QC Manager is responsible for managing and coordinating the three phases of control and documentation performed by the QC Specialists, testing laboratory personnel, and any other inspection and testing personnel required by this Contract. The QC Manager is the manager of all QC activities and must not be the Special Inspector. The QC manager is responsible for notifying the Special Inspector of activities which require their review. The QC manager is responsible for coordinating the Special Inspection activities, see paragraph CONTRACTOR'S QUALITY CONTROL (QC) MANAGER, in Section 01 45 35 SPECIAL INSPECTIONS. The QC manager is responsible for the quality control for Controlled Area perimeter construction.

#### 1.6.1.2 Qualifications

The QC Manager must be an individual with a minimum of 10 years combined experience in the following positions: Project Superintendent, QC Manager, Project Manager, Project Engineer or Construction Manager on similar size and type construction contracts which included the major trades that are part of this Contract. The individual must have at least two years experience as a QC Manager. The individual must be familiar with the requirements of EM 385-1-1, and have experience in the areas of hazard identification, safety compliance, and sustainability.

The QC Manager and all members of the QC organization must be capable of reading, writing, and conversing fluently in the English language.

#### 1.6.1.3 Construction Quality Management Training

In addition to the above experience and education requirements, the QC Manager and all members of the QC team must have completed the Construction Quality Management (CQM) for Contractors course. If the QC Manager does not have a current certification, obtain the CQM for Contractors course certification within 90 days from receiving the Notice to Proceed. This course is periodically offered by the Naval Facilities Engineering Systems Command and the Army Corps of Engineers. Contact the Contracting Officer for information on the next scheduled class.

The Construction Quality Management Training certificate expires after 5 years. If the QC Manager's certificate has expired, the QC Manager must retake the course to remain current throughout the duration of the Contract.

#### 1.6.2 Organizational Changes

Maintain the QC staff with personnel as required by the specification section at all times. When it is necessary to make changes to the QC staff, revise the CQC Plan to reflect the changes and submit the changes to the Contracting Officer for acceptance.

#### 1.6.3 Alternate Quality Control (QC) Manager Duties and Qualifications

Designate an alternate for the QC Manager at the work site to serve in the event of the designated QC Manager's absence. The period of absence may not exceed 2 weeks at one time, and not more than 30 workdays during a calendar year. The qualification requirements for the Alternate QC Manager must be the same as for the QC Manager.

#### 1.6.4 Commissioning

Commissioning (Cx) is a systematic, quality-focused process for delivery of a project focusing on verifying and documenting all commissioned systems and assemblies are installed, tested, and operating as they were planned and designed to meet the project requirements. The Quality Control requirements outlined in this specification section are key in supporting the objectives of the Cx process, specifically coordinating testing, documenting, and verifying proper system operation. Properly executed the Quality Control support of Cx ensures timely execution of necessary tasks to deliver the fully commissioned and operating systems in coordination with the overall construction and project schedule.

Provide Cx in addition to the quality control requirements of this section and not as a substitute for quality control requirements. The QC Manager is responsible for carrying out the three phases of control while ensuring the functional performance and integrated systems tests are coordinated with the Cx provider as required for each system to be commissioned.

##### 1.6.4.1 Certificate Of Readiness

The QC Manager must issue a Certificate of Readiness for Government approval for each system to be commissioned. Schedule Functional Performance Tests for each system only after the Certificate of Readiness has been approved by the Government for the system. The Certificate of Readiness certifies that all required inspections have been completed and deficiencies that were identified through any prior review, inspection, or test activity have been corrected before the start of Functional Performance Tests. Refer to Cx requirements in Section 01 91 00.15 BUILDING COMMISSIONING for a list of systems to be commissioned and detailed requirements for the Cx provider.

#### 1.6.5 Quality Control (QC) Specialists

Provide a separate QC Specialist at the work site for each of the areas as listed in the Experience Matrix below, who must assist and report to the QC Manager and who must have no duties other than their assigned quality control duties. These individuals or specialized technical companies must be a first tier Subcontractor. QC Specialists must be physically present at the work site with frequency as indicated in the Experience Matrix below, to participate in the QC meetings, perform the three phases of control, including participation in Preparatory and Initial Phase meetings, and to perform and document Follow-up inspections as an extension of the QC Manager for each definable feature of work in their

area of responsibility. QC Specialists must assist and be present for training events, and Critical System Acceptance inspections by the Government. Qualification, experience, Area of Responsibility, and frequency of QC surveillance are provided in the Matrix listed herein.

| <b>Experience Matrix</b>                         |                                                                                                                                                                                   |                                                                                                                                                                                                        |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1. Area</b>                                   | <b>2-1. Qualification<br/>2-2. Experience</b>                                                                                                                                     | <b>3-1. Area of Responsibility<br/>3-2. Frequency</b>                                                                                                                                                  |
| Testing, Adjusting and Balancing (TAB) Personnel | 2-1 TAB Team Field Leader must be a member of AABC or an experienced technician of the firm certified by the NEBB.<br>2-2. 3 years experience immediately preceding this Contract | 3-1. Area of Responsibility: Testing, Adjusting, and Balancing of HVAC Systems.<br>3-2. Frequency of QC surveillance and inspection will be weekly during installation and including final inspection. |
| Registered Structural Engineer, (P.E.)           | Erection of structural steel, Section 05 12 00 STRUCTURAL STEEL                                                                                                                   | Minimum twice a week                                                                                                                                                                                   |
| Fire Protection QC Specialist (FPQC)             | Note: See paragraph FIRE PROTECTION QC SPECIALIST (FPQC)                                                                                                                          | Note: See paragraph FIRE PROTECTION QC SPECIALIST (FPQC)                                                                                                                                               |
| Roofing Manufacturer's Technical Representative  | 2-1. Installation and testing of roofing systems, Section 07 13 53 ELASTOMERIC SHEET WATERPROOFING<br>2-2. 5 years experience minimum                                             | 3-1. Area of Responsibility: Installation and testing of roofing systems<br>3-2. Frequency of QC surveillance and inspection will be weekly during installation and including final inspection.        |

#### 1.6.6 Fire Protection QC Specialist

Provide a Fire Protection Quality Control Specialist (FPQC) within the QC organization to perform quality control related activities as specified herein on fire protection and life safety systems installed under this Contract.

#### 1.6.6.1 Qualifications

The FPQC must have the following qualifications:

- a. Be a registered Professional Engineer (P.E.) licensed by a Licensing Board in the United States, the District of Columbia, Guam or Puerto Rico, having passed the National Council of Examiners for Engineering and Surveying (NCEES) written examination specifically in the discipline of Fire Protection Engineering.
- b. Have a minimum of 5 years of Fire Protection Engineering experience on projects of similar relevance and complexity to the fire protection work specified under this Contract.
- c. Other than the contractual obligations with the Prime Contractor, the FPQC must have no other business relationship (i.e., employee, owner, partner, operating officer, distributor, salesman, technical representative, family relationship, or financial investment) with the Prime Contractor or subcontractors.
- d. Be employed by an independent engineering firm or company. The firm may identify multiple, to a maximum of five, licensed Fire Protection Engineers for the performance of the duties under the Contractor but must submit the names and qualifications for Government approval for all individuals identified prior to them performing any work under this Contract. These individuals may not be substituted without prior approval from the Contracting Officer.

#### 1.6.6.2 Responsibilities

FPQC duties and responsibilities:

- a. Assist in the development of the CQC Plan including the Testing Plan and Log and executing the three phases of control for work involving the installation and testing of fire protection and life safety systems as an extension of the QC Manager.
- b. Participate in project QC Meetings. Participate in Preparatory and Initial Phase meetings and perform and Follow-up inspections for work involving the installation and testing of fire protection and life safety systems.
- c. Review and certify that all submittals pertaining to fire and life safety systems are complete and accurate prior to submission to the Government. The FPQC specialist is responsible for ensuring submittals are complete and accurate and all corrections have been made prior to submission to the Government. The Government reserves the right to reject any submittal that has not been reviewed first by the FPQC and so marked, in writing, attesting to such review and completeness of the submittal.
- d. The Government reserves the right to reject any submittal or construction that is not in compliance to Contract. Government reviews do not relieve the Contractor responsibility for providing adequate quality control measures and do not constitute or imply acceptance of Contract variation.
- e. Perform construction surveillance in accordance with the Schedule of Fire Protection System Inspections. Construction surveillance includes

but is not limited to performing periodic on-site inspections during construction at specified milestones, performing a pre-final inspection of installed systems and witnessing functional testing; and participating and documenting in an on-site final acceptance inspection of fire protection and life safety systems with the Government FPE.

- f. Document inspection results on a FPQC report prepared each day/night that inspections are performed. The report must include a description of the visual inspection or observation performed, a written summary of findings, a conclusion on compliance with the Contract documents, and signature of the FPQC Specialist. In person inspection must be documented via photo (.jpeg). Photographic documentation must include before and after conditions and physical measurements. Forward the FPQC daily report to the QC Manager who must include the report with the submission of their daily QC Report to the Government each day. Every site visit by the FPQC must be documented on a FPQC daily report.

#### 1.6.6.3 Schedule of Fire Protection System Inspections

A schedule, prepared by the Fire Protection DOR, which lists each of the required visual inspections and observations required by the FPQC. The schedule is included at the end of this section as Attachment A.

#### 1.6.7 Special Inspector and Special Inspector of Record

The Special Inspector (SI) and Special Inspector of Record (SIOR) must be an independent third party hired directly by the Prime Contractor. The SI and SIOR must not be a company employee of the Contractor or any subcontractor performing the work to be inspected. The qualifications of the SI and SIOR are defined in Section 01 45 35 SPECIAL INSPECTIONS.

#### 1.7 SUBMITTAL AND DELIVERABLES REVIEW AND APPROVAL

Procedures for submission, review and approval of submittals are described in Section 01 33 00 SUBMITTAL PROCEDURES. Procedures must include field verification of relevant dimensions and component characteristics by the QC organization prior to submittal being sent to the Contracting Officer. The QC organization is responsible for certifying that all submittals and deliverables are in compliance with the Contract. When Section 01 91 00.15 BUILDING COMMISSIONING are included in the Contract, the submittals required by those sections have to be coordinated with Section 01 33 00 SUBMITTAL PROCEDURES to ensure adequate time is allowed for each type of submittal required.

#### 1.8 OVERVIEW OF REPORT REQUIREMENTS

Prior to commencing work on construction, the Contractor must obtain a set of the current report forms. Contact the Contracting Officer for sample forms. The report forms will consist of the Contractor Quality Control (CQC) Report, CQC Report (Continuation Sheet), Contractor Production Report, Contractor Production Report (Continuation Sheet), Preparatory Phase Checklist, Initial Phase Checklist, Testing Plan and Log, and Rework Items List. Unless otherwise provided by the Contracting Officer, Contractor may use the forms provided as related material located at <https://www.wbdg.org/dod/ufgs/ufgs-01-45-00>.

The Contractor must deliver the following to the Contracting Officer during construction, at the frequencies indicated:

a. Contractor Quality Control Reports

- (1) For work during regular working hours, furnish the original and one copy of the Contractor Quality Control (CQC) Report to the Contracting Officer by 10:00 AM the next working day after the date covered by the report.
- (2) For work outside of regular working hours (e.g., nighttime work), furnish the original and one copy of the CQC Report to the Contracting Officer by 10:00 PM the next working day after the date covered by the report.
- (3) At a minimum, prepare and submit one CQC Report for every 7 days of no work and on the last day of a no work period. All calendar days need to be accounted for throughout the life of the Contract. The first report following a day/night of no work will be for that day/night only.
- (4) Refer to paragraph QUALITY CONTROL ACTIVITIES herein for details on what is to be included in the CQC Reports.

b. Contractor Production Reports

- (1) Contractor Production Reports are required for each day and night that work is performed and must be attached to the CQC Report prepared for that same day or night. Account for each calendar day throughout the life of the Contract.
- (2) Refer to paragraph CONSTRUCTION DOCUMENTATION herein for details on what is to be included in the Contractor Production Reports.

c. Preparatory Phase Checklists

- (1) Submit the Preparatory Phase Checklist for each Preparatory Phase held.
- (2) Refer to paragraph PREPARATORY PHASE herein for details on the Preparatory Phase and requirements of the checklist.

d. Initial Phase Checklists

- (1) Submit the Initial Phase Checklist for each Initial Phase held.
- (2) Refer to paragraph INITIAL PHASE herein for details on the Initial Phase and requirements of the checklist.

e. Testing Plan and Log

- (1) Submit a copy of the updated Testing Plan and Log along with the last daily CQC Report of each month.
- (2) Submit the final Testing Plan and Log to the preparer of the Operation & Maintenance documentation.
- (3) Refer to paragraph TESTING herein for details on testing and what is to be included in the Testing Plan and Log.

f. Rework Items List

- (1) Submit a copy of the Rework Items List along with the last daily CQC Report of each month.
- (2) Refer to paragraph DEFICIENCY/REWORK ITEMS LIST herein for details on what is to be included in the Rework Items List.

## 1.9 THREE PHASES OF CONTROL

QC enables the Contractor to ensure that the construction, including that of subcontractors and suppliers, complies with the requirements of the Contract. At least three phases of control must be conducted by the QC Manager to adequately cover both onsite and offsite work for each definable feature of the construction work as follows:

### 1.9.1 Preparatory Phase

Document the results of the preparatory phase actions by separate minutes prepared by the QC Manager and attached to the CQC Reports. Instruct to applicable workers as to the acceptable level of workmanship required to meet Contract specifications.

Notify the Contracting Officer at least five (5) working days in advance of each preparatory phase.

The Preparatory Phase Meeting must be conducted by the QC Manager and attended by the QC Specialists, the Project Superintendent(s), the SSHO(s), the CxC, the Special Inspector, the Special Inspector of Record, and the foreman responsible for the DFOW or as approved by the Contracting Officer. When the DFOW will be accomplished by a subcontractor, that subcontractor's foreman must attend the Preparatory Phase Meeting. Document the results of the preparatory phase actions in the CQC Report and in the Preparatory Phase Checklist (see Attachment B). This phase is performed prior to beginning work on each DFOW. (Note: Preparatory Phase Meeting shall only be held if the shop drawings and/or submittals have been approved, hard copies are printed for the meeting, the APP and appropriate AHA related to the DFOW have been submitted and the appropriate personnel as stated above are present for the meeting). Perform the following prior to beginning work on each DFOW:

- a. Review each paragraph of the applicable specification sections, reference codes, and standards. Make available during the preparatory inspection a copy of those sections of referenced codes and standards applicable to that portion of the work to be accomplished in the field. Maintain and make available in the field for use by Government personnel until final acceptance of the work.
- b. Review the Contract drawings.
- c. Verify that field measurements are as indicated on construction or shop drawings or both before confirming product orders, to minimize waste due to excessive materials.
- d. Verify that appropriate shop drawings and submittals for materials and equipment have been submitted and approved. Verify receipt of approved factory test results, when required.
- e. Review the testing plan and ensure that provisions have been made to provide the required QC testing.
- f. Examine the work area to ensure that the required preliminary work has been completed and complies with the Contract and ensure any deficiencies/rework items in the preliminary work have been corrected and confirmed by the Contracting Officer
- g. Review coordination of product/material delivery to designated

prepared areas to execute the work.

- h. Examine the required materials, equipment, and sample work to ensure that they are on hand and conform to the approved shop drawings and submitted data and are properly stored.
- i. Check to assure that all materials and equipment have been tested, submitted, and approved.
- j. Review the APP and appropriate Activity Hazard Analysis (AHA) to ensure that applicable safety requirements are met, and that required Safety Data Sheets (SDS) are submitted.
- k. Discuss specific controls to be used, construction methods, construction tolerances, workmanship standards, and the approach that will be used to provide quality construction by planning ahead and identifying potential problems for each DFO. Ensure any portion of the plan requiring separate Contracting Officer acceptance has been approved.
- l. Review the Cx requirements in accordance with Section 01 91 00.15 BUILDING COMMISSIONING and ensure all preliminary work items have been completed and documented.
- m. Review Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.
- n. If work includes demolition work, review demolition work plan to ensure compliance with EM 385-1-1.
- o. If work includes excavation, at a minimum the NAVFAC DM/ET and PWD ME Dig Safe Coordinator (DSC) shall be invited to the Preparatory and Initial Phase Meetings and will review utility locating requirements. (Note: Special attention is required if Hazardous or Mission Critical Utilities are within the excavation area.) If Hazardous and Mission Critical Utilities are located within the excavation area, the NAVFAC DM/ET, PWD ME DSC, PWD ME Design Manager (DM) and the assigned PWD ME Project Civil Engineer must be present at the meeting to review requirements to ensure safety and preservation of critical utilities is discussed with adequate focus. Contractor to provide NAVFAC DM/ET notification no later than 7 working days prior to holding the Preparatory and Initialpre-excavation/demo safety review meeting. The NAVFAC DM/ET, as well as the PWD ME DSC, will attend this meeting to ensure safety and preservation of critical utilities is discussed with adequate focus.
- p. If work includes excavation, review Soil Management Requirements (Note: Special attention is required if the work is within an IR site or Hazardous Soils are within the excavation area. Include Code 106.3 Representatives at this meeting to discuss Soil Management processes and procedures.)
- q. If the work is subject to any environmental (EV) permitting, Archaeological Monitoring, or SHPO approvals, review the terms and conditions of the applicable permits as well as any supplemental controls/ approvals that are required to complete the work. (Note: Include PWD ME EV Representatives at this meeting to review the project specific requirements).

- r. If work includes the removal and disposal of Hazardous materials, review the appropriate work plans to ensure the work plans have been approved and any comments are understood by the work execution team. (Note: Include Code 106.3 Representatives at this meeting to discuss Hazardous Materials handling and disposal processes and procedures.)

#### 1.9.2 Initial Phase

Notify the Contracting Officer at least 2 working days in advance of each initial phase. When construction crews are ready to start work on a DFOW, the QC Manager must conduct the Initial Phase Meeting with the QC Specialists, the Project Superintendent(s), the SSHO(s), the CxC, the Special Inspector, the Special Inspector of Record, and the foreman responsible for that DFOW. Observe the initial segment of the DFOW to ensure that the work complies with Contract requirements. Document the results of the initial phase in the CQC Report and in the Initial Phase Checklist (see Attachment C). Repeat the initial phase for each new crew to work onsite, or when acceptable levels of specified quality are not being met. Indicate the exact location of initial phase for definable feature of work for future references and comparison with follow-up phases. Perform the following for each DFOW:

- a. Check work to ensure that it is in full compliance with the Contract requirements. Review minutes of the preparatory meeting.
- b. Verify adequacy of controls to ensure full Contract compliance. Verify required control inspection and testing comply with the Contract.
- c. Establish level of workmanship and verify that it meets the minimum acceptable workmanship standards. Compare with required sample panels as appropriate.
- d. Resolve any workmanship issues.
- e. Resolve conflicts.
- f. Ensure that testing is performed by the approved laboratory.
- g. Check work procedures for compliance with the APP and the appropriate AHA to ensure that applicable safety requirements are met.
- h. Review project specific work plans (i.e. Cx, HAZMAT Abatement, Stormwater Management) to ensure all preparatory work items have been completed and documented.
- i. Coordinate scheduled work with special inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.

#### 1.9.3 Follow-Up Phase

Perform the following for on-going DFOW daily, or more frequently as necessary, until the completion of each DFOW. The Final Follow-up for any DFOW will clearly note in the daily report the DFOW is completed, and all deficiencies/rework items have been completed in accordance with the paragraph DEFICIENCY/REWORK ITEMS LIST. Each DFOW that has completed the Initial Phase and has not completed the Final Follow-up must be included on each daily report. If no work was performed on that DFOW for the period

of that daily report, it must be so noted. Document all Follow-Up activities for DFOWs in the daily CQC Report:

- a. Ensure the work including control testing complies with Contract requirements until completion of that particular work feature. Record checks in the CQC documentation.
- b. Maintain the quality of workmanship required.
- c. Ensure that testing is performed by the approved laboratory.
- d. Ensure that deficiencies/rework items are being corrected. Conduct final follow-up checks and correct all deficiencies prior to the start of additional features of work which may be affected by the deficient work.
- e. Do not build upon nor conceal non-conforming work.
- f. Assure manufacturers' representatives have performed necessary inspections if required and perform safety inspections.
- g. Review the Cx requirements in accordance with Section 01 91 00.15 20 TOTAL BUILDING COMMISSIONING.
- h. Coordinate scheduled work with Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.

#### 1.9.4 Additional Preparatory and Initial Phases

Conduct additional preparatory and initial phases on the same DFOW if the quality of on-going work is unacceptable, if there are changes in the applicable QC organization, if there are changes in the on-site production supervision or work crew, if work on a DFOW has not started within 45 days of the initial preparatory meeting or has resumed after 45 days of inactivity, or if other problems develop.

#### 1.9.5 Notification of Three Phases of Control for Off-Site Work

Notify the Contracting Officer at least 2 weeks prior to the start of the preparatory and initial phases.

#### 1.9.6 Deficiency/Rework Items List

The QC Manager must maintain a list of work that does not comply with the Contract, identifying what items need to be corrected, the activity ID number associated with the item, the date the item was originally discovered, the date the item will be corrected by, and the date the item was corrected.

The QC Manager reviews the list at each weekly QC Meeting:

- a. There is no requirement to report a deficiency/rework item that is corrected the same day it is discovered.
- b. No successor task may be advanced beyond the preparatory phase meeting until all deficiencies/rework items have been cleared by the QC Manager and concurred with by the Contracting Officer. This must be confirmed as part of the Preparatory Phase activities.

- c. Attach a copy of the Rework Items List to the last daily CQC Report of each month.
- d. The Contractor is responsible for including those items identified by the Contracting Officer.
- e. All deficiencies/rework items must be confirmed as corrected by the QC Manager, and concurred by the Contracting Officer, prior to commencement of any completion inspections per paragraph COMPLETION INSPECTIONS unless specifically exempted by the Contracting Officer.
- f. Non-Compliance with these requirements is grounds for removal in accordance with paragraph ACCEPTANCE OF THE QUALITY CONTROL (QC) PLAN.
- g. All delays, concurrent or related to failure to manage, monitor, control, and correct deficiencies/rework items are entirely the responsibility of the Contractor and can not be made the subject, or any component of any request for additional time or compensation.

#### 1.10 TESTING

Perform specified or required tests to verify that control measures are adequate to provide a product which conforms to Contract requirements. Upon request, furnish to the Government duplicate samples of test specimens for possible testing by the Government. Testing includes operation and acceptance tests when specified. Procure the services of an U.S. Army Corps of Engineers approved testing laboratory or establish an approved testing laboratory at the project site or within 10 miles. Perform the following activities and record and provide the following data:

- a. Verify that testing procedures comply with Contract requirements.
- b. Verify that facilities and testing equipment are available and comply with testing standards.
- c. Check test instrument calibration data against certified standards.
- d. Verify that recording forms and test identification control number system, including all test documentation requirements, have been prepared.
- e. Record results of all tests performed, both passing and failing, on the CQC report for the date taken. Include the specification paragraph reference, location where tests were taken, and the sequential control number identifying the test. If approved by the Contracting Officer, the actual test reports may be submitted later, and must include a reference to the test number and date the test was performed. Provide an information copy of tests performed by an offsite or commercial test facility directly to the Contracting Officer. Failure to submit timely test reports as stated results in nonpayment for related work performed and disapproval of the test facility for this Contract.

##### 1.10.1 Accreditation Requirements

Construction materials testing laboratories must be accredited by a laboratory accreditation authority and must submit a copy of the Certificate of Accreditation and Scope of Accreditation to the Contractor
