

Custom Bearing Manufacturing **Statement of Work (SOW)**

Marshall Space Flight Center (MSFC) requires expert knowledge to complete the manufacturing of custom InRoDES bearings for a turbopump for the in house RDRE engine system. MSFC requires specific bearing materials including Armalon specialty cages, Silicon Nitride rolling elements and Cronidur 30 specialty ring materials. Due to fluid compatibility and operational parameters replacement materials are not an option. The manufacturing requires vendor is ISO 9001:2015 and AS9100 Rev. D Certified. It is critical that vendor is NADCAP certified for magnetic particle inspection per ASTM E1444 and Surface Temper inspection per ANSI B3.3.

SOW is as follows.

1. The vendor shall manufacture QTY. 16 custom bearings per MC34030-001 Drawing specified by National Aeronautics and Space Administration (NASA), specifically Marshall Space Flight Center (MSFC).
2. Vendor shall undergo review prior to start of manufacturing per NASA MSFC approval.
3. Perform Magnetic Particle Inspection with NADCAP certification of all final machined surfaces per ASTM E144 with acceptance criteria per MIL-STD-1907, GRADE A.

Period of Performance (POP)

March 20, 2026 through December 20, 2026

Shipping

1. Contractor shall ship or hand deliver all deliverables and process development samples to:
Marshall Space Flight Center
Central Receiving, Bldg 4631
Attn: Hallie Collopy
Huntsville, AL 35812

Deliverables

1. Bearings built under SOW
2. Report on deviations DWR(s)
3. Inspection reports
