

SINGLE SOURCE JUSTIFICATION (UNDER SAT)

JOINT ADMINISTRATIVE OPERATIONS Acquisitions Operations

Pursuant to FAR subpart 13.106-1(b)(1)(i) and (ii), for purchases not exceeding the Simplified Acquisition Threshold (SAT), Contracting Officers may solicit from only one source if the circumstances deem only one source is reasonably available (e.g., urgency, exclusive licensing agreements, brand name, or industrial mobilization).

Instructions: The information in the text boxes are provided as sample language or to indicate a needed fill-in. Sample language should be removed from the final document. All text boxes require information and shall not be left blank.

1. Description of Need

The Lower Snake River Compensation Plan (LSRCP) requires the acquisition of a Magic Valley Heli-Arc Fishpump to support essential fish-handling operations at Service facilities. The pump is needed to safely and efficiently move live fish during hatchery, transport, and resource-management activities. The Heli-Arc Fishpump is uniquely designed to minimize handling stress, scale loss, and mortality while maintaining high-volume pumping capacity. This equipment directly supports mission-critical fisheries programs, including brood stock collection, spawning operations, and fish distribution. Failure to obtain the appropriate pump would delay

2. Market Research Conducted

Program staff conducted market research by reviewing available commercial fish-pump manufacturers, contacting regional fisheries programs, and evaluating industry specifications. While other general-purpose pumps exist, they do not meet the necessary biological-protection standards or system compatibility requirements. Research confirmed that alternative manufacturers lack:

- Comparable fish-safe handling technologies
- Heli-arc welded construction capable of continuous hatchery use
- Proven compatibility with existing LSRCP fish-transfer systems.

3. Other Capable Sources

No other responsible sources were identified. While several companies manufacture water-pumping equipment, none produce a pump specifically engineered for safe live-fish movement at the needed volume and durability levels. No vendors responded with interest or indicated an ability to supply an equivalent system.

4. Barriers to Competition

The primary barrier is the unique engineering and biological-handling design of the Magic Valley Heli-Arc Fishpump. Competing pumps risk injury to fish due to excessive pressure, turbulence, or inadequate material construction. Additionally, other brands are not compatible with existing hose fittings and transfer systems, creating operational delays and increased costs for retrofitting.

Because only Magic Valley can meet these combined technical and biological requirements, competition is not feasible for this acquisition.

5. Contractor's Qualifications

Magic Valley is a long-standing, reputable provider of fish-handling equipment for federal and state hatchery programs. Their Heli-Arc Fishpump is recognized for:

- High reliability under continuous hatchery loads
- Proven performance in regional fisheries programs

6. Determination of Fair and Reasonable Cost

Pricing was evaluated against previous purchases of similar fish-handling technology and verified as consistent with expected costs for specialized equipment of this type. The unique engineering requirements, limited availability, and mission-critical nature of the pump support the reasonableness of the quoted price.

7. Recommendation and Certification by Program Office

Based on the above justification, I recommend this acquisition to be conducted using sole source acquisition procedures. I hereby certify that this justification is accurate and complete to the best of my knowledge and belief.

Program / Project Officer

8. Contracting Officer Certification and Approval: *Under SAT*

Based on the above justification, I hereby certify and approve the use of sole source acquisition procedures under FAR Part 13 for this purchase.
