

Notice of Intent: EVOS M7000 Imaging System

(75N98026Q00276)

The National Institutes of Health intends to award a Firm-Fixed-Price Purchase Order to Life Technologies Corp. This acquisition includes a \$15,000 trade-in discount for returning an old model AMF5000.

In accordance with FAR Part 6.302-1, Life Technologies Corp is the only known responsible source who can provide the products/services that meet our standards. No other source has been identified who can provide the requirements listed below.

The EVOS microscope is required in the NCI/CCR/LCBG department for tumor dormancy studies. We will use it to image the dormant tumor lesions in the lungs and other organs of the tumor-bearing mice. A typical experiment involves tissue/organ imaging of many mice from different experimental groups, which is followed by the flow cytometry of immune cells. These experiments are labor intensive; people need to stay very late in the evenings and are often exhausted. The automation system built in this microscope will make our work more efficient and more feasible.

The EVOS M7000 Imaging system is a fully automated, high-performance fluorescence and transmitted light microscope designed for fast, flexible, and user-friendly imaging. It features a 5-position objective, 4-color LED channels, dual cameras, and an automated X/Y stage with advanced autofocus. Ideal for time-lapse, Z-stacks, and multi-well scans, it delivers publication-quality images with minimal effort.

This notice is not a request for competitive quotes. Life Technologies Corp is the service provider. However, any available small businesses (e.g., 8(a), service-disabled veteran owned small business, HUBZone small business, small disadvantaged business, veteran-owned small business, and women-owned small business) as stated herein may submit a written capability statement that clearly supports and demonstrates their ability to perform the requirement. A determination by the Government to compete this proposed award based upon responses to this notice is solely within the discretion of the Government.

It is anticipated that an award will be issued approximately five(5) days after the date of this notice unless the Government determines that another vendor has the capability to meet this requirement.

Please email responses to david.shen@nih.gov no later than 11:00 p.m. EDT on May 9, 2026.
