Item Name: Meter, Density, Digit

NSN: 6635-01-570-8762

Part Number: 153059 (CAGE 0FW58, Anton Paar USA)

Quantity: Maximum of 2 each, Maximum of 68 each over 5-Year LTC period

End Item: DMA 4500 Digital Density Meter

RESPONSE DATE:

14 May 2026

REQUIREMENTS DESCRIPTION:

The DMA 4500M Digital Density Meter (NSN 6635-01-570-8762) is a highly accurate, automated laboratory instrument used to measure the density and purity of critical mission fluids. It serves as the end item for certifying the quality of fuels, lubricants, and coolants used across Department of War (DoW) platforms. Its primary purpose is to ensure operational readiness and mechanical reliability by verifying that these fluids meet strict military standards, reducing maintenance overhead, and identifying contamination before it can damage military hardware.
