

QUESTIONS AND ANSWERS

Commercial Solutions Opening (CSO) for Next Generation Underwater Breathing Apparatus (Opening Number: N61331-25-S-NQ17)

Question #1

Q: Can you confirm that the required Phase 1 pitch does NOT require schedule, ROM Pricing, and data right assertions?

A: Correct. The company presenting the solution must demonstrate having the ability to fulfill these elements, but are not required to formally submit a response to these requirements during Phase 1.

Question #2

Q: Is it possible to get a few days extension on the RFI deadline?

A: At this time, the government does not plan to extend, but please keep monitoring the announcement for extensions, if any.

Question #3

Q: We've only just seen this request come through which appears to be for US Navy EOD but uses the same reference number as the US Marine Corps Sources Sought? For reference we are also aware of other Commercial UBA Sources Sought reference (N61331-25-SN-Q09) from NOV 24, lead poc Brandon D Hayes and reference (N61331-25-SN-Q44) from JUL 25, lead poc Sarah Pearce. We just wanted to double check as we understood these are two separate requirements for separate customers within the US DOW. Any clarification on how these notices/procurements are related or not would be much appreciated.

A: To address your question regarding the relationship between notices N61331-26-S-NQ17, N61331-25-SN-Q09, and N61331-25-SN-Q44, please be aware that these are three separate requirements. Specifically, N61331-26-S-NQ17 is associated with the NextGen Commercial Solutions Opening (CSO) and it represents the next phase in this procurement process. The Phase I brief is a required submission for the CSO process which may lead to the procurement of a new EOD UBA system.
