

Statement of Work

For

60 MXS/MXMD (TMDE Flight)

Description: The 60MXS TMDE Flight requires a 720A Kelvin Varley Voltage Divider. This item is authorized and required on our CA/CRL R14. This item was an initial AFLCMC acquisition fielded to base level PMEL's in 2020 with the purpose to support Digital Multimeters, Precision DC Sources/Calibrators, Thermocouple Simulators/Calibrators, other Precision DC Voltage Ratio-Dividers, Dial-A-Viders, Dekaviders, DC Voltage Standards/Calibrators, Differential Voltmeters, Null Detectors, Nanovoltmeters/Micro Ohmmeters, Multifunction/Meter, Calibrators, DC Reference Standards, Wideband Floating Differential/Signal Conditioning Amplifiers, Thermal True RMS Multimeters, and Digital Strain Indicators.

Our divider was sent out for repair in 2023 to the Fluke Corporation and is believed to have been lost by the 60 APS. An ROS has been completed finding no specific person liable of the asset a loss, nevertheless the calibration flight still needs this asset to perform maintenance, and our current authorized O&M would be exhausted on this single purchase driving the need for this UFR. 720A divides input voltage to within 0.1 part per million, which makes it suitable for calibration of the laboratory's five working standards responsible verification of several weapons test sets including a large inventory of TS-4485/ALM-288 Testers required for operational check-out of the Travis AFB's mobility aircraft fleet chaff and flare countermeasure dispensers and handheld multimeters.

Phone: 707-424-5873

Email: joshua.sweeney@us.af.mil

The contractor shall provide the following:

1. Equipment.

1.1 PN: 720A

Description: Kelvin Varley Voltage Divider

2. Delivery

3.1 Deliver equipment to the following address:

60 MXS/MXMD

360 RAGSDALE STREET BLDG 804

TRAVIS AFB, CA 94535-2546
