

Single Source Justification (Simplified Acquisition)**Section A: General Contract Information**Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)?☐ Yes☒ No

Contracting Activity: AFRL/PZLEQ

Project/Program Name: Mettler-Toledo Recrystallization Equipment

Purchase Request / Local ID Number: TBD

Estimated Contract Cost (including Options): [REDACTED]**Section B: Description of the Supplies/Services Required**

AFRL/RWTE requires the purchase of Mettler-Toledo Analyzer EasyViewer 100 system, iC vision software to control the EasyViewer 100 system, ReactRaman 802L spectrometer, ReactRaman Immersion probe, installation, and an additional year service plan. These items are required to develop a fully integrated chemical reaction and crystallization work station, as well as for particle analysis during the formulation of energetic materials.

Section C: Justification for Soliciting from a Single Source or Brand Name

The EasyViewer 100 image viewer, ReactRaman 802 Spectrometer, Raman Probe and associated software must integrate with the EasyMax 402 reactor synthesis station used by AFRL/RWTE for chemical process development and recrystallization efforts. Integrating the image viewer and spectrometer with the reactor synthesis minimizes manpower requirements, eliminates the requirement to develop specialized software for the data collection, and increases the efficiency of the chemical process development. Integrating the image viewer, spectrometer, probes, and reactor synthesis station enables real-time display of chemical reaction/crystallization trends and identification of potential issues with energetic material formulations.

This equipment is highly specialized and supports recrystallization efforts being used by AFRL/RWTE for energetic material formulations. This equipment is required to develop a high-precision, automated, chemical reaction/crystallization work station for efficient chemical process development and optimization prior to scaling up energetic material formulations.

Mettler-Toledo AutoChem, Inc. is the sole source manufacturer and distributor of the EasyViewer 100 system, ReactRaman 802 Spectrometer, and their associated accessories. No other manufacturer or distributor is authorized to produce or supply the EasyViewer 100 System, ReactRaman 802 Spectrometer, and their associated accessories. The Sole Source letters can be found in File Item (FI) 358 - Sole Source Justification.

Section D: Efforts to Obtain Competition

The EasyViewer 100 System, ReactRaman 802, and their associated accessories are highly specialized and support recrystallization efforts being used by AFRL/RWTE for energetic material formulations. This equipment is required to integrate with the EasyMax 402 reactor synthesis station currently used by AFRL/RWTE; to develop a high-precision, automated, chemical reaction/crystallization work station for efficient chemical process development and optimization prior to scaling up energetic material formulations.

Mettler-Toledo AutoChem, Inc. is the sole source manufacturer and distributor of the EasyViewer 100 System, ReactRaman 802 Spectrometer, and their associated accessories.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

AFRL/RWTE and the Contracting Officer will continue to survey the open market to see if any new products or manufacturers enter the marketplace and could meet the Government's requirements.

Single Source Justification (Simplified Acquisition)

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
