

REQUIREMENTS FOR Maintenance Shop Towel Laundry Services

Background: Surface Maintenance manages eleven shops who aid and fix maintenance equipment for roughly 96 units across Michigan. To properly complete job orders for the units across Michigan, the maintenance shops need cleaning products that allow for proper clean-up and cleaning of all maintenance equipment. In addition to facilitating clean and optimal maintenance shop operations, the soil rags must also be laundered and re-used in an environmentally friendly manner to remove the dirt, grease, other petroleum, oil, and lubricant products, and all-around grime so they can be delivered again in a clean and reusable condition.

Period of Performance (PoP): The Period of Performance shall be 1 Base Year of 12 months, with four 12-month option periods.

Maintenance Shop Hours: The contractor shall provide services between core hours of 0545-1630 from ***Tuesday, Wednesday and Thursday***, with the opportunity to be flexible in order to meet the requirements of the service, except on recognized U.S. holidays or when the Government facility/installation is closed due to local or national emergencies, administrative closings, or similar Government-directed facility/installation closings. Performance shall be at each maintenance shop facility (See Technical Exhibit 4) throughout Michigan.

Maintenance Locations:

MATES	2450 N Down River Rd	Grayling MI 49738
CSMS	3323 N Martin Luther King Jr. Blvd	Lansing MI 48906

FMS 17	7400 S. Huron River Dr.	Ypsilanti, MI 48197
FMS 22	2300 Airport Rd.	Midland MI 48642

Requirements:

Delivery schedule. Pickup and delivery of rags shall at each specified maintenance shop across the state of Michigan. Pick up of rags at each location shall be coordinated with a

POC from each shop. Contractor shall report to the COR when coordination has been established with each shop POC. If the pick up or delivery date falls on a holiday, pick up or delivery shall be the next business day unless otherwise coordinated with the POC from each shop and the COR. Pick up and drop off shall occur two times per month and may be permitted to be delivered and picked up once per month if requested by the contractor and approved by the COR. Contractor shall primarily perform deliveries and pickups on Tuesday, Wednesdays, and Thursdays, due to limited staffing on Mondays and Fridays, and the impact of some Federal Holiday closings. The contractor shall furnish everything required to perform these services.

Exchange of clean and dirty shop rags. The contractor shall ensure all employees possess driver's licenses for the delivery vehicles that are used to transport clean and soiled shop rags to and from MIARNG facilities. Clean rag delivery and dirty rag pickup may be performed on the same visit by the contractor's service technician or on separate visits, as long as the scheduled interval is maintained for the sake of continuity in shop operations. Contractor shall deliver, pick up, and transport items using conventional methods, and comply with all local, state, and federal sanitation and HAZMAT regulations regarding the transportation of hazardous materials over public roads, as contained in small quantities of each soiled shop rag.

Accountability of contracted materials. The contractor shall deliver all rags in bundles of known and convenient numerations. Upon arrival of contractor to the maintenance facility, the POC of that specific maintenance shop will inspect delivery to quickly confirm the number of shop rag bundles received and sign all necessary paperwork. It is the contractor's responsibility to ensure general and approximate accountability of soiled shop rags upon pickup. The contractor and the government understand that shop rags are easily misplaced and will eventually wear out and be discarded at no cost to the government.

Operation Surge. In the event that shops experience a surge in operations that consume fresh supplies of shop rags faster than anticipated, shops may increase the estimated amount of service rags for each location up to 1 location additional charge to the government. Any increase above the 10% surge will require contract modification. The duration of this 10% surge will not exceed three months in cumulative duration each period of performance (PoP) year without modification of the base contract or return to normal quantities shown in TE3. Contractor understands that shops will only use this surge clause as needed and will revert to original quantities as soon as possible, within three-month surge period.

Laundry Service. The contractor shall have the ability to launder shop rags soiled with dirt, grease, other petroleum, oil, and lubricant products, and all-around grime in a safe and environmentally friendly manner, compliant with all local, state, and federal regulations that apply to such laundry operations.

Key Items. Clean shop rags, clean rag hamper or storage cabinet, and a storage container for dirty rags. Clean rags and an available dirty rag hamper shall be available at all times. The clean rags and dirty rag containers shall be stored in an easily accessible location specified by each maintenance shop point of contact. The dirty rag containers shall ensure that grease or POL residue do not leak out of the container, causing a spill, stain, slip hazard, or any other hazard or inconvenience to the maintenance shop workers.
