INDUSTRY DAY

Subsea and Seabed Warfare & Maritime Operations

18 FEBRUARY 2026

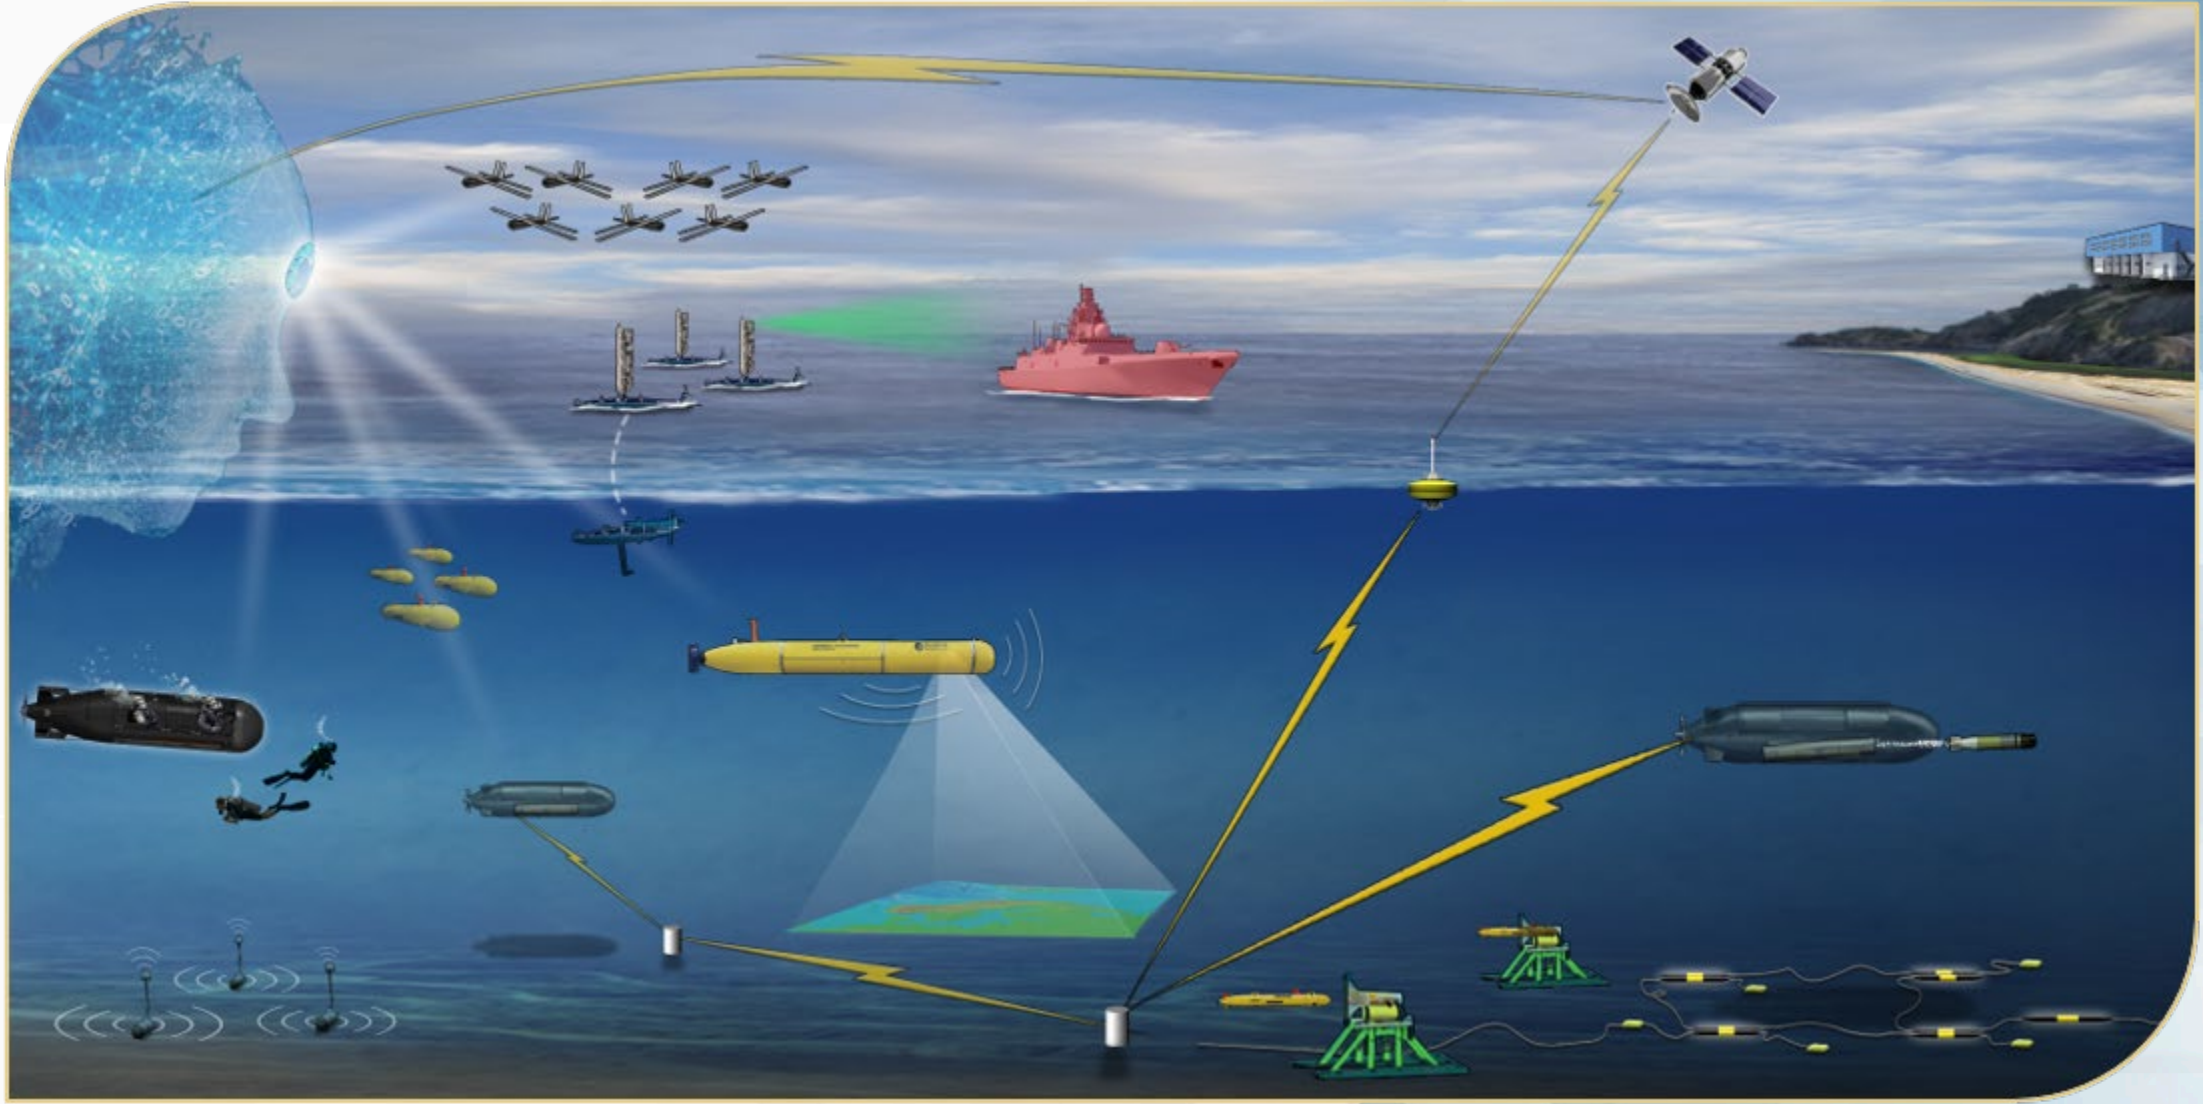

Distribution Statement A. Approved for public release: distribution is unlimited.

DOMINATE THE LITTORALS

*Delivering relevant solutions in the
littorals from seabed to space:
For Today, Tomorrow, and the Navy after Next*

Subsea and Seabed Warfare & Maritime Operations Department

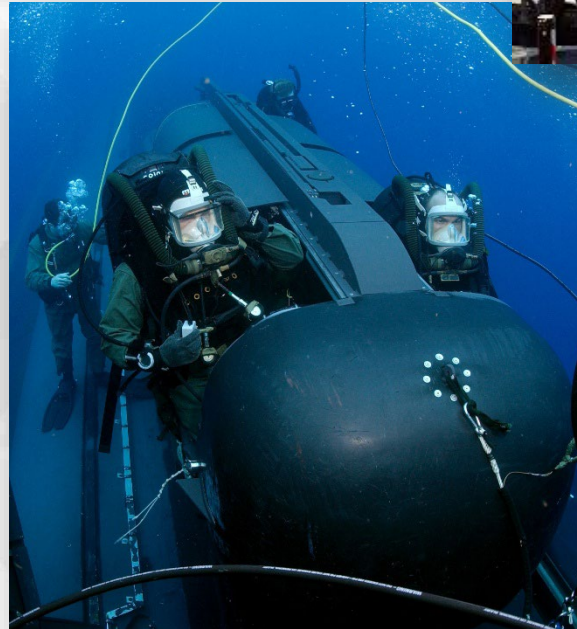

Delivering combat effectiveness and lethality via next-generation military technologies focused in the areas of robotics, artificial intelligence, littoral and undersea surveillance, enhanced diving, and special mission systems.

Key Missions & Capabilities

Special Operation Systems

Key Missions/Capabilities

- Provides unique material and service solutions for U.S. Special Operations Command (SOCOM) and allied Special Operations Forces (SOF).
- Develops and fields surface and subsurface manned mobility platforms.
- Engineers stealthy unmanned systems with advanced reconnaissance and scalable effects.
- Creates novel and innovative SOF gear and payloads
- In-Service Engineering

- Offers Commercial Off The Shelf (COTS), Modified Off The Shelf (MOTS), custom design, and integration services.
- Provides full lifecycle support including Program Management, Systems Engineering, Quality Assurance, and Integrated Logistics Support (ILS).
- Tests and evaluates unmanned vessels, manages sensor integration, and provides user training

Diving, Life Support and Protective Equipment

Key Missions/Capabilities

- Serves as the U.S. Military's expertise center for diving technology, tools, and life support systems.
- Conducts full lifecycle support: research, development, testing, acquisition, maintenance, and project management for diving and life support gear.
- Manages underwater breathing systems, including the MK 25 and MK 16 apparatuses, and develops next-generation rebreathers.
- Tests equipment in extreme high and low-pressure environments to ensure performance and safety.

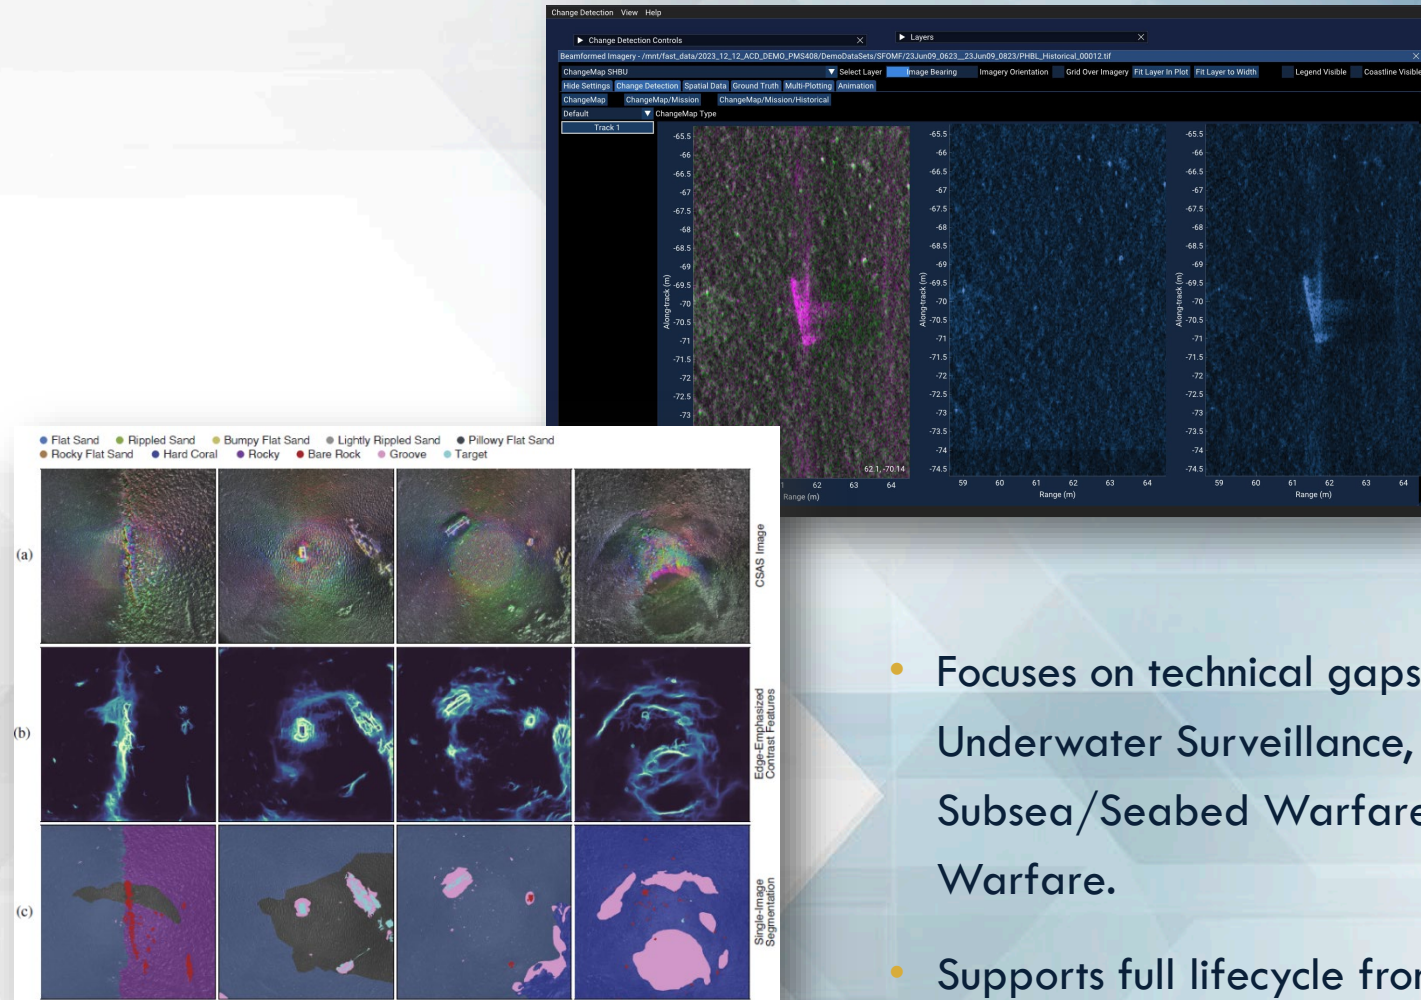

- Manages protective equipment for sailors, including Chemical, Biological, and Radiological (CBRN) defense gear.
- Provides anti-terrorism equipment, including lifesaving armor, helmets, and communication devices.
- Supplies safety equipment for firefighting, enclosed space operations, and general deck safety.
- Offers depot-level repair and manufacturing services for critical components.

Littoral and Undersea Sensors and Payloads

Key Missions/Capabilities

- Develops technical solutions to support Intelligence, Surveillance, and Reconnaissance (ISR) for Undersea and Mine Warfare missions.
- Integrates a broad range of sensing technologies, including acoustic, electro-optic, and electro-magnetic systems.
- Develops embedded software for Automatic Target Recognition (ATR), Artificial Intelligence/Machine Learning (AI/ML), and data collection.

- Focuses on technical gaps in Underwater Surveillance, Counter Subsea/Seabed Warfare, and Mine Warfare.
- Supports full lifecycle from Science & Technology (S&T) through In-Service Engineering Agent (ISEA) support.

Maritime Special Programs

Key Missions/Capabilities

- Manages products and services that meet enhanced security requirements at higher classification levels.
- Specializes in rapid prototyping and responsive contracting to meet near-term, in-theater operational needs.
- Provides Intelligence, Surveillance, and Reconnaissance (ISR) Unmanned Air/Surface/Underwater Vehicles (UxV).
- Develops specialized ISR sensor packages, payloads, and maritime communications equipment.
- Executes fast turnaround design-build-test-deliver cycles for reliable solutions.

Adaptive and Asymmetric Systems

Key Missions/Capabilities

- Accelerates the delivery of force-multiplying technologies to the warfighter.
- Develops and delivers rapidly deployable, autonomous, and attritable systems and associated logistics.
- Provides technical execution and system integration from concept design to rapid prototyping.
- Conducts test execution and analysis for new systems.
- Coordinates with follow-on fabrication and scaling activities

Future Outlook

S Department Business Outlook

Increase partnering

- Increased industry partnering for RDTE, In-Service sustainment and Depot activities across the portfolio
- Outsourcing of system production at-scale on rapid timeline

Growing Portfolio

- Workload for product lines increasing substantially, while government capacity remains stable

Integration Space

- Footprint required for development and sustainment increasing due to increased scale of delivery required
 - Integration & Assembly Spaces
 - Maintenance & Depot Spaces
 - Secure & Restricted Meeting & Lab Spaces
 - Rapid Prototyping Facilities

Representative Skill Sets

- Acoustic and Non-Acoustic Signal Processing
- Advanced Test and Evaluation
- Agile Program Management
- Artificial Intelligence and Machine Learning (AI/ML)
- Autonomous Systems and Robotics
- Depot-Level Maintenance
- Electronic Warfare
- Embedded Systems Development
- Integrated Logistics Support (ILS)
- Life Support Systems Engineering
- Materials Science
- Mine Warfare Expertise
- Ocean Engineering
- Payload and Launch System Design
- Rapid Prototyping
- RF and Communications Engineering
- Security Engineering
- Sensor and Data Fusion
- Swarm and Collaborative Robotics
- Systems Engineering
- Unmanned Systems Integration
- Weapons Systems Integration
