

INDUSTRY DAY

Non-FAR Partnerships and Collaboration

18 FEBRUARY 2026

Distribution Statement A. Approved for public release: distribution is unlimited.

DOMINATE THE LITTORALS

*Delivering relevant solutions in the
littorals from seabed to space:
For Today, Tomorrow, and the Navy after Next*

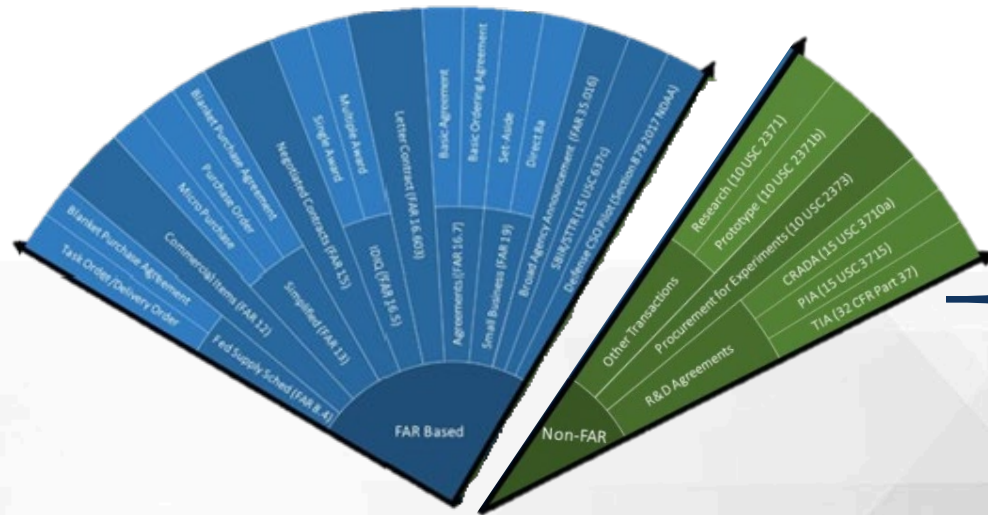

ACQUISITION REFORM MEETS WARTIME URGENCY

“The question has never been whether we have the capital. The question now is whether we have the institutional architecture that can absorb risk, take risk, accelerate winner and retire dead ends.”
– John Phelan, Secretary of the Navy

“Speed to delivery is now our organizing principle. It is the decisive factor in maintaining deterrence and warfighting advantage. If our warfighters die or our country loses because we took too long to get them what we needed, we have failed. It is that simple. The sense of urgency has slipped too much, and when you look at what we face, we have to recapture it”
– Pete Hegseth, Secretary of War

“We’ve been trained for the last 30 to 40 years in compliance. This is rewiring our brains to say outcomes matter more than compliance”
– VADM Okano, Director, Naval Rapid Capabilities Office

Non-FAR Agreements

Strategic priority for the Navy

Offer flexible and streamlined alternatives to traditional government contracts

Foster faster innovation and collaboration

Primary goal is to accelerate development and transition of new technologies to the warfighter

Rely on the innovation of the private sector and academia

OTHER TRANSACTION AUTHORITY (OTA)

Accelerate Innovation with the Government's Most Flexible and Agile Contracting Tool!

- Move at the speed of business, not bureaucracy – OTAs can be awarded in as little as 2-6 months
- Tailor agreements to your commercial practices and the specific needs of the project
- Reduce administrative burdens, paperwork, and compliance costs – focus resources on innovation and execution!

New to Government Contracting? OTAs were designed for YOU!

- We welcome innovators!! OTAs are designed to bring in “non-traditional” partners – if you have cutting-edge technology, we want to work with you!

A True Partnership with Business-Friendly Terms

- Negotiable Intellectual Property Rights! You can protect core technology while still meeting government needs
- Collaborative and Open Dialogue – The OTA process encourages open communication. This is a collaborative partnerships, not a rigid, hands-off process.
- Pathway to Production – A successful prototype OTA can lead directly to a non-competitive, follow-on production OTA.

Research OTA - To explore and develop new technologies, concepts, or approaches that are not yet mature enough for practical application. It involves fundamental scientific inquiry and experimentation.

Prototype OTA - To develop and test a functional prototype of a technology, product, or system that has already been conceptually validated through research.

Production OTA - To transition a successfully prototyped technology or system into full-scale production and deployment. This type of OTA has stricter requirements and limitations.

Consortium OTA - To engage multiple organizations (companies, universities, nonprofits) in collaborative research, development, or prototyping efforts. It enables the government to tap into a broader range of expertise and resources.

Ready to Collaborate?

- **Join a Consortium**: Many OTA opportunities are managed through third-party consortia focused on specific technology areas (e.g., space, cyber, ordnance).
 - Joining a consortium is often the first step to get visibility into upcoming projects and teaming opportunities.
- **Look for Solicitations**: Opportunities are often announced through Requests for White Papers, Requests for Prototype Proposals, Broad Agency Announcements, and Commercial Solutions Openings.
 - Keep an eye on government sites like SAM.gov and the websites of specific DoW innovation hubs (DIU, DON RCO).
- **Engage Early and Often**: Participate in industry days and tech challenges.
 - Build relationships with the program offices and innovation hubs that align with your technology. The collaborative nature of OTAs means early engagement is key.

COOPERATIVE RESEARCH AND DEVELOPMENT AGREEMENTS (CRADAS)

For Government:

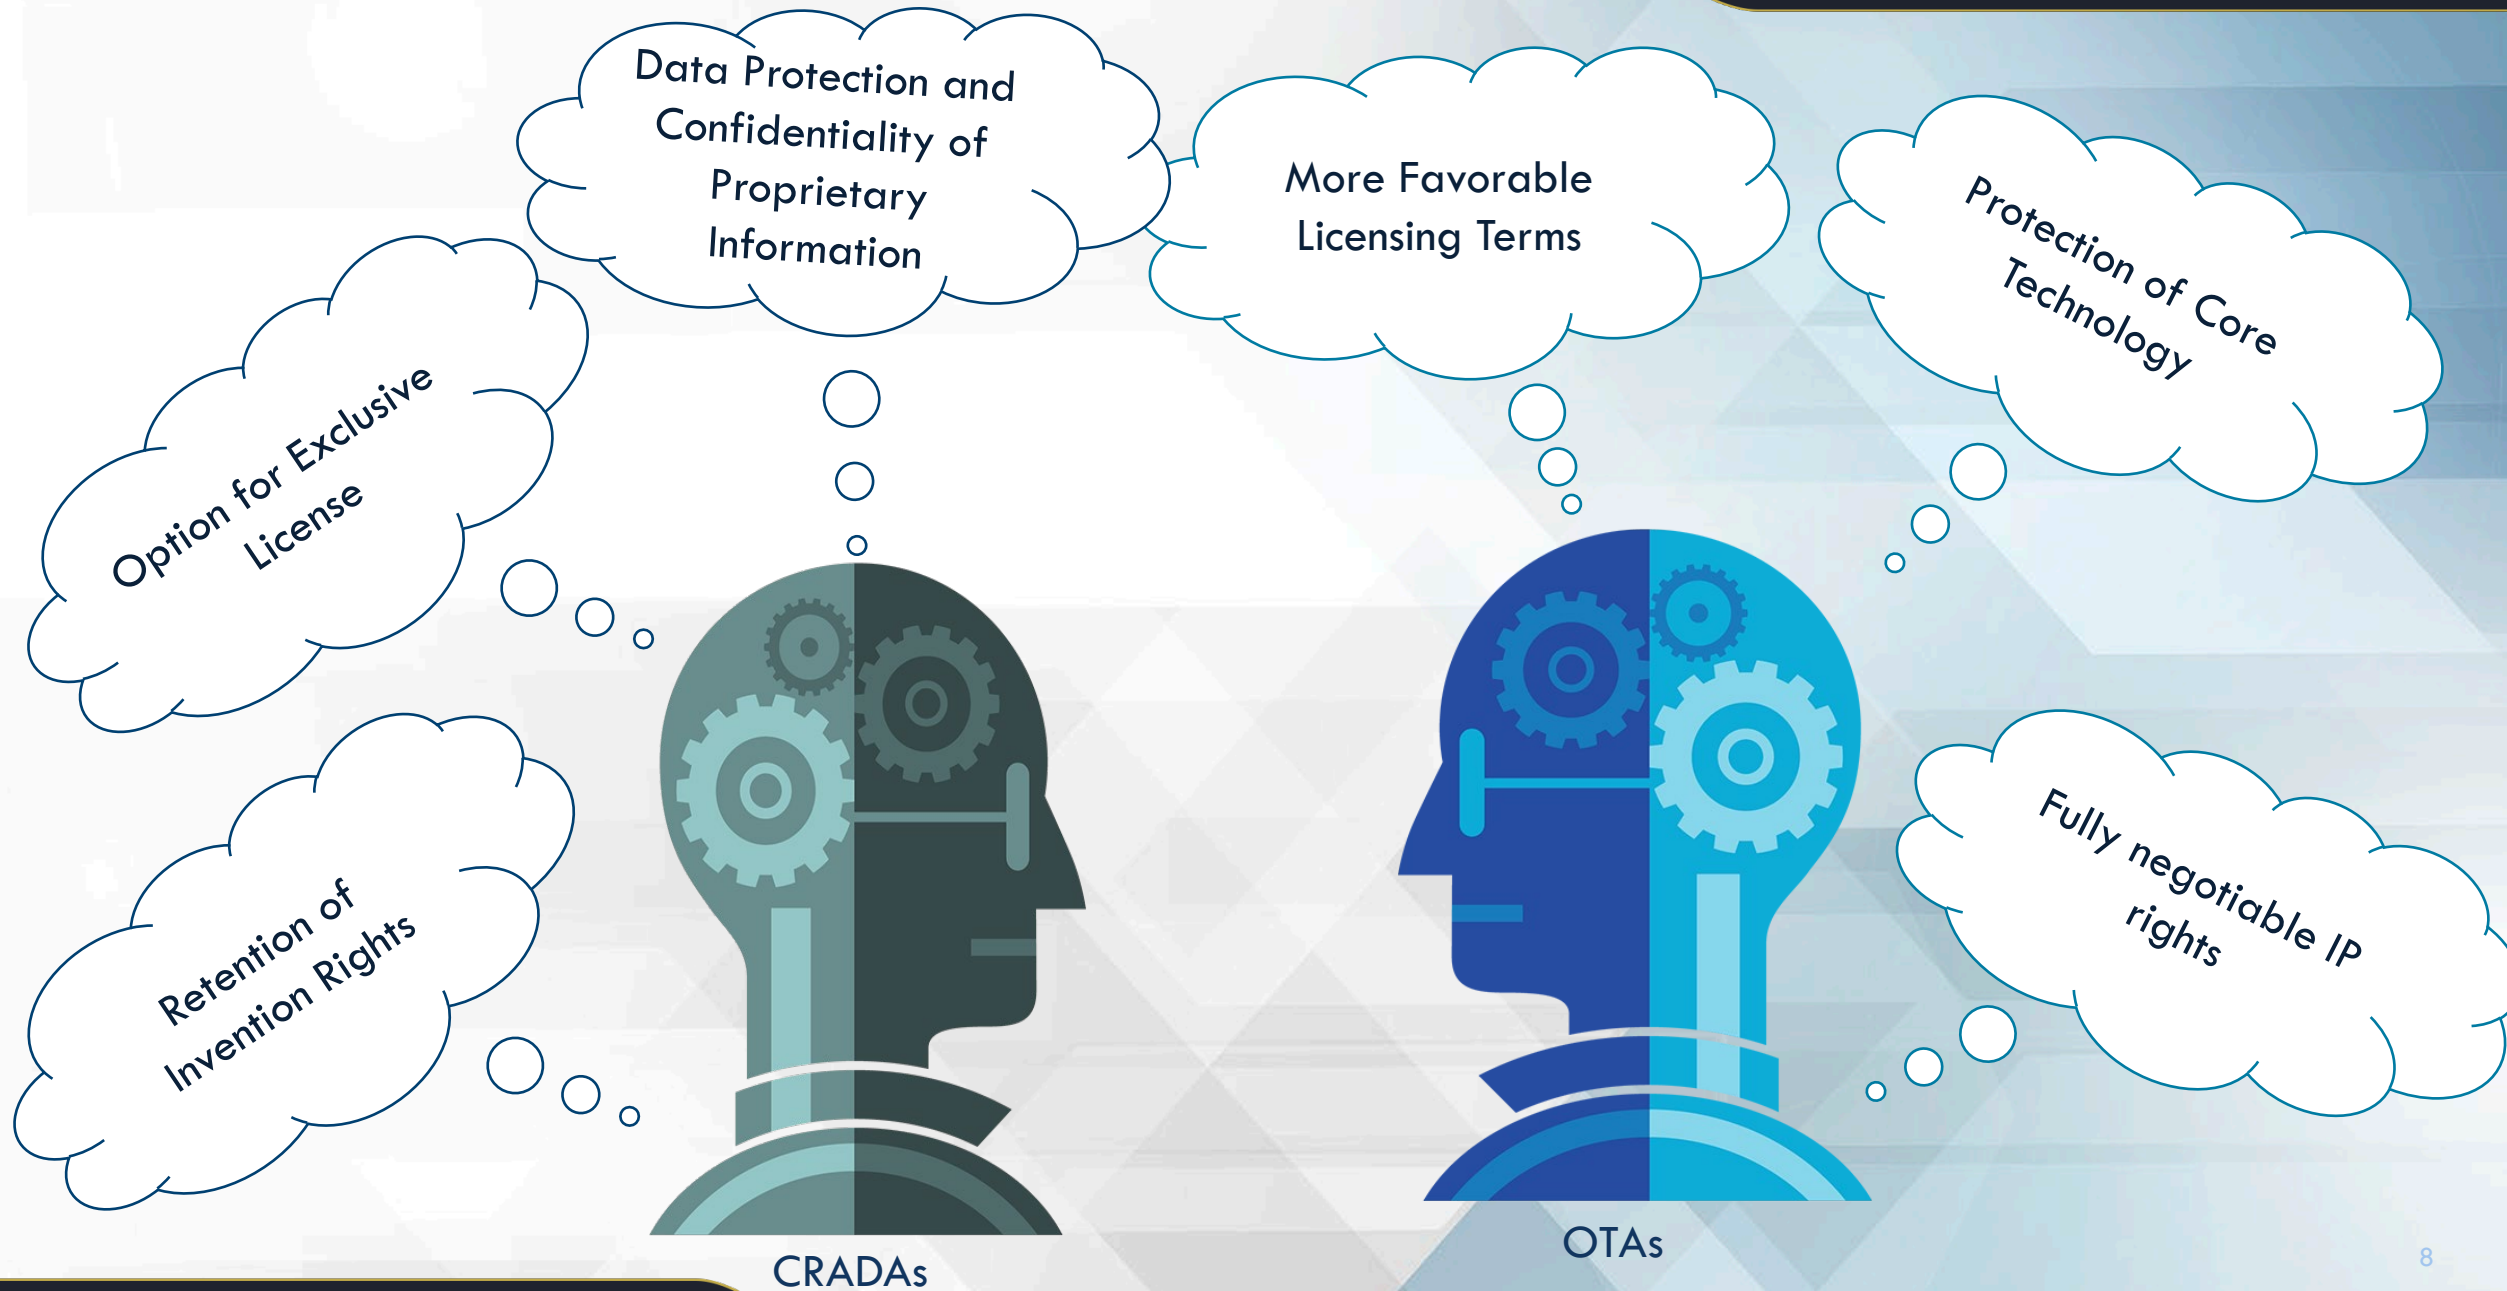

- Allows Navy lab to work directly with a company and its technology without any financial outlay
- Test capabilities in a real-world lab environment (example: testing an AI algorithm on actual Navy sensor data)
- Navy labs can use CRADAs as a “scouting” tool – work with multiple companies on a specific problem then identify the most promising technologies

15 U.S. Code § 3710a defines CRADAs

For Industry:

- Access to unique government facilities, equipment, and world-class scientific expertise (example: test company capabilities in Joint Gulf Test Range or Acoustic Test Pond)
- Better understanding of the Navy’s operational challenges and requirements
- Strengthened OTA Proposal – proposal won’t be based on theory; it will be backed by actual performance data generated in a Navy lab!
- Provides simple, no-cost entry point for small businesses and startups who may be hesitant to engage in a formal procurement process

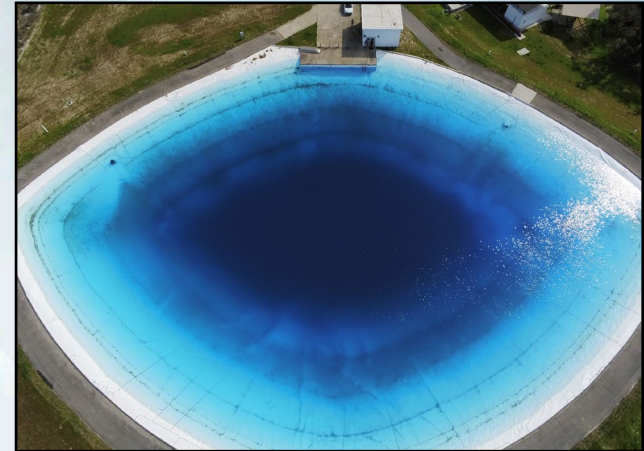

WORK WITH PRIVATE PARTY AGREEMENTS (WWPP)

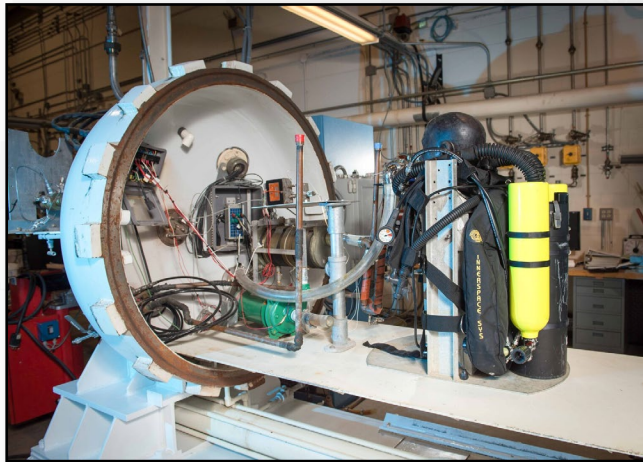

- Agreement that allows a private entity to pay to use the Navy's unique technical facilities and personnel for testing and other work – 10 USC §2563

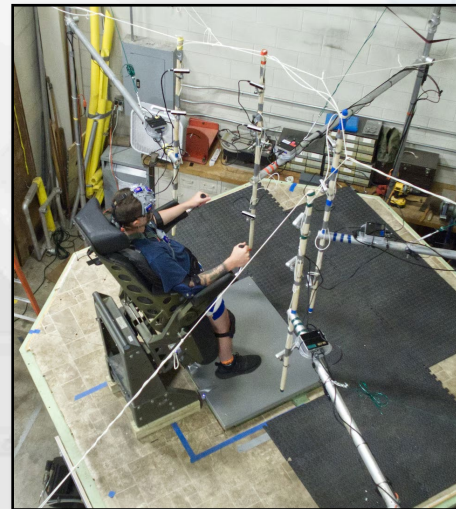

Fanselau Coil Facility

Acoustic Test Pond

Hydrospace Laboratory

Human Systems Integration
Usability Lab

Joint Gulf Test Range

What's Next?

- Keep an eye out for Commercial Solutions Openings!
 - SAM.gov – main place to start!
- Join a Consortium that Matches Your Capabilities!
 - ATI, NSTXL, etc.
- Master the New Acquisition Pathways
- Align with Strategic Imperatives
- Adopt a Modern Mindset
