

140 MXG Auto-Vending Benchstock/Hardware Dispenser

Directly supports and improves bench stock management, FOD control, man-hour assets, accountability and other mandates in accordance with DAFI 21-101 and AFMAN 23-122.

Auto-vending Bench stock/ Hardware Machine. To be considered equal, the proposed bench stock/ hardware vending machine must meet the following characteristics:

- Capability:
 - Must be able to hold 1000+ unique items with a minimum of 940 items.
 - Bench stock items managed at the 100% stock level and will not allow you to stock an item over the 200% level in any individual bin.
 - Items are listed on a Restock Report when an item reaches 50%, eliminating human error and stock-outs.
 - Automated system to eliminate the need for the manual red/green flagging system
 - Bench stock items can be searched / issued by NSN, Nomenclature, Multiple Part Numbers or traditional bin locations.
 - Automatically deduct the issued items from the total stock level, eliminating the need to individually count multiple item issues such as pin rivets, which controls wastage and virtually eliminates the possibility of FOD.
- Software
 - Technical Support must be provided if a system error were to occur
- Enclosure:
 - Must be able to be relocated
 - Must take up less than 25 sq ft of space
- Warranty
 - Repairs provided on site or provide shipping method.
 - Offer on-site training and set-up assistance
