

Single Source Justification (Simplified Acquisition)**Section A: General Contract Information**Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)?☐ Yes☒ No

Contracting Activity: AFLCMC/PZIBB

Project/Program Name: AFPET FAME Analyzers (x3)

Purchase Request / Local ID Number: [REDACTED]

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The Air Force Petroleum Agency (AFPET/PTPL) has an urgent need to acquire three Fatty-Acid Methyl Ester (FAME) Analyzers. These instruments are critical for performing specification testing on jet fuel (ASTM D1655) to ensure the quality and integrity of fuel products used by the DoD and DLA. Any procured instrument must fully comply with the standards outlined in ASTM D7797.

Section C: Justification for Soliciting from a Single Source or Brand Name

To ensure aviation safety and maintain strict fuel quality standards, the CONUS AFPET Laboratories must acquire three analyzers to test jet fuel for Fatty-Acid Methyl Ester (FAME) content. The mandatory testing procedure, ASTM D7797, requires a unique analysis method known as Flow Analysis by Fourier Transform Infrared Spectroscopy (FA-FTIR), with a partial least squares (PLS-1) processing of data for determining FAME.

The only instrument on the market that performs this analysis directly in accordance with ASTM D7797 is the FIJI FAME instrument from Seta Analytics. As shown in Sole Source letter, Lazar Scientific, Inc., Lazar Scientific, Inc. is the exclusive United States distributor for Seta Analytics instruments, making them the only available vendor capable of supplying the required analyzers.

Section D: Efforts to Obtain Competition

In an effort to ensure full and open competition, extensive research was conducted to identify any other instruments capable of meeting the ASTM D7797 standard. One potential alternative, the Eralytics ERAJET FAME from Analytical Instruments, was identified and evaluated. However, this instrument does not directly perform the required test method; instead, it provides results that are merely correlated to ASTM D7797, which fails to satisfy the method's strict technical requirements. This research ultimately concluded that no other instruments meeting the necessary standard are currently available on the market.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

The analysis of FAME content in Aviation Turbine Fuels is an enduring requirement. Therefore, the Government will actively pursue competitive solutions for all future acquisitions in this area. To preclude future single-source procurements, we will continuously monitor the open market, identify vendors capable of fulfilling the Government's requirements, and inform them of the strict technical standards necessary to meet our mission. Public notifications, such as Sources Sought notices, will continue to be used to maximize competition to the greatest extent possible.

Single Source Justification (Simplified Acquisition)

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
