

CAPABILITY ASSESSMENT PLAN (CAP) COMPANION GUIDE

This guide is developed to help assist with building the Capability Assessment Plan (CAP) document. Any additional questions not answered should be directed to the Industrial Specialist in the applicable MSC at one of the below e-mails (be sure to CC the Contracting Officer on the correspondence):

- DLA HQ Industrial Specialists – HQJ7_warstopperprogram@dla.mil
- DLA Aviation Industrial Specialists – AVNIndustrialPreparedness@dla.mil
- DLA Land & Maritime Industrial Specialists – L.MWarstopper@dla.mil
- DLA Troop Support Industrial Specialists – TS_Warstopper@dla.mil

Introduction/Background

The CAP survey collects information related to your company's ability to meet specific Surge and Sustainment (S&S) requirements.

- Preparation for a CAP does not absolve you from submitting other required documentation (technical and cost) in your RFP response.
- The CAP informs the source selection committee about how your firm, groups, and any sub vendors are able to meet the government's resupply need for go-to-war items and sustain that capability for 18 months.
 - For example, the MWR value is the amount the government requires every 30 days. If your company cannot meet these terms, the CAP explains your counterproposal to the source selection committee.
 - The Vendor does not have to provide a response for all the items in the solicitation, ***only what you are able to reasonably provide***. You may provide partial listings as well. The DLA buyer may create more than one award or combine responses from many solicitations into a single award.
- You are required to send a copy of the completed CAP for review under the Surge and Sustainment evaluation criteria as part of your response.
- The completed CAP Summary Report is a binding document.
- If subsequent changes are made to the terms and conditions of your CAP during negotiations with DLA's source selection committee, you are required to update your CAP report and re-submit a hardcopy and electronic submission with the agreed-upon changes.

Please fill in each line with the applicable information in the top section.

CAPABILITY ASSESSMENT PLAN (CAP) COMPANION GUIDE

Table 1: Information Section Terms and Definitions

Term	Definition
Company Name	List your official company name
CAGE	List the Cages used to support this request
Solicitation Number	List the Solicitation number this CAP is responding to.
Phase	If this is a base contract list the Phase as 1; each additional option year will equal the next phase (I.E. Option year 2 would be phase 3)
Issue Date	This is the date the solicitation was posted to DIBBS
CAP Completion Date	Date you the vendor completed the CAP

Section 1: Surge & Sustainment Coverage Capability

This is the section vendor will relay their company's ability to meet specific Surge and Sustainment requirements. The columns are grouped by purpose, with more detailed definitions below:

- What the government requires (MWR)
- What you are able to provide (Offered Amount)
 - Any items not listed or left blank will be considered as a 0
- How you will provide the item: Production, External Supplier, or Inventory
- If additional time is needed between deliveries, enter a value in Ramp-Up Days
 - There is no requirement for Ramp Up days; however, if it applies to any item, enter the days
- At Initiation Point you must choose ACR or AOR. Any blank block the Government will assume ACR.
 - In addition, if you specify "After Order Receipt" for Initiation Point, the ramp-up time must be less than or equal to 30 days

Full Coverage indicates the ability to supply the full required quantity (MWR).

Mandatory Data Required are: Offered Amount, Offered Interval

CAPABILITY ASSESSMENT PLAN (CAP) COMPANION GUIDE

Table 2: Section 1 Definitions

Term	Definition
FSC	Federal Supply Class. This value will be blank for grouped items. It will also be blank for Clothing & Textile items.
Item	The NIIN or PGC of the item listed in the solicitation. For grouped items, this value should be listed as "Group".
MWR	Monthly Wartime Rate. The MWR represents a 30-day recurring requirement for Surge & Sustainment (S&S) items that replaces the traditional D1:D6 planning schedule. The MWR requirement is a wartime additive number, meaning it is in addition to any peacetime production amount for this item.
UI	DLA's unit of measure to its customers. You are required to identify your surge coverage based on the DLA unit of issue, which may differ from your unit of measurement for sales to DLA. For example, you may sell DLA the item in 500 Foot rolls; however, DLA sells the item in Linear Feet (LF) to its customers. Even though you are not being asked to sell the item in Linear Feet (LF), you are being asked to evaluate the surge delivery schedule in terms of Linear Feet (LF).
Offered Amount	The quantity that you are offering to provide to DLA to meet their 30-day recurring MWR requirement for Surge & Sustainment items.
Offered Interval	The interval applies to MWR which is required every 30 days throughout a contingency(ies). It defaults to 30 and can be changed.
Ramp Up - Ramp Up Days	Ramp up days is the period of time needed to increase production to meet the MWR (number of days needed to provide Vendor Offered Amount after receipt of delivery order).
Ramp Up - Initiation Point	The point at which the ramp up time begins. It may be after the receipt of the contract (ACR), or after the receipt of order (ARO).
Surcharge	An additional cost stated as a percentage of the offered unit price that will be in effect if the Surge Option is invoked. If the solicitation or contract has different unit prices based on contract year, or contains an economic price adjustment provision, then the percentage will still apply to and during the effective period of the new unit price. Any surcharge must be fair and reasonable and is subject to negotiation.
Provision Methods - External Supplier	Selecting this method indicates that your suppliers will cover any portion of the S&S delivery schedule through their organic production capability and best lead-time delivery. External Supplier support can be in the form of finished inventory in cases where you are a reseller or distributor, or in the form of raw materials, components, or sub-assemblies if you are a manufacturer.
Provision Methods - Inventory	Selecting this method indicates that you will cover any portion of the S&S delivery schedule through finished inventory maintained as a safety stock for unplanned customer demand.
End Day	The number of days before the contract expiration date when your capability to provide the Offered Quantity to DLA will end or will start phasing out.

Section 2: Description of Constraints

This section describes your constraints or difficulties meeting the requested Surge requirements. If the constraint is too much to overcome internally and you need additional assistance from the government, recommend using Section 3. However, you may not need an investment, only time to realign your business process or resolve an issue with a sub-vendors or suppliers.

Use this section to outline issues and a brief description of how it will ramp up to meet accelerated delivery and increased quantities (i.e., surge) and sustain an increased production and delivery pace throughout the contingency (i.e., sustainment). Additionally, each offeror must provide a separate capability assessment plan (CAP) to document its detailed technical approach for covering S&S requirements.

If the CAP recommends some type of Government investment, offerors must include their plan for refreshing or replacing S&S material consumed to ensure a continued surge capability. The CAP must include an exit strategy that describes the transition and ramp-down of S&S assets and any remaining Government investment not consumed before contract expiration

Offerors must provide pricing within the electronic CAP submission for S&S requirements based on the schedule for delivering items in the offeror's CAP. When S&S pricing exceeds peacetime pricing, the offeror's proposal must include sufficient description to explain the rationale for the additional costs associated and provide a breakdown of costs to substantiate the pricing.

Section 3: Proposed Solutions & Gov't Investments Required to obtain S&S Coverage Capability (*Optional*)

If you need, or think, a Government Investment to reach this number is needed, this section is used to propose solutions to the Government. The government assumes you need their assistance to make this solution. Some examples of investments are:

- Raw Material
- Equipment
- Long Lead-Time Components
- Lean Initiative or Quality Improvement
- Skilled Labor

CAPABILITY ASSESSMENT PLAN (CAP) COMPANION GUIDE

Clearly explain the investment recommendation. This recommendation may be pursued by the DLA Industrial Capability & Warstopper Program as an Industrial Capability Assessment (ICA).

Section 3.1: Coverage to be gained

Only complete this section if section 3 is filled out. Use this section to clearly explain the improvement that will be gained with the Section 3 investment.

Section 3.2: Funding Requirements to obtain S&S Coverage – Investment Cost Details

Only complete this section if section 3 is filled out. This section is used as a rough order funding estimate to the Industrial Capability team.

Term	Definition
Cost Name	High level description of the investment, If you are recommending multiple lines of effort be sure you identify which one this investment pertains to.
Time Saved	The investment would speed up lead time by how many days (this is an estimate)
Applies to	This is the section of items the investment applies to. (I.E. If a piece of equipment was purchased it would speed the production of all items cited with specified raw material.)
Year 1-6	This is the total estimated funding required each year to perform the investment outlined in section 3 by year and would be verified in an ICA.
Total	This is the total cost of the proposed investment. This number is an estimate and would be verified in an ICA.

Section 4: List of Attached Files

List any attachments pertaining to the CAP.
