BRAND NAME JUSTIFICATION

Requirement. NB672010-26-01539 - Power Meters and Components

This is a brand name justification for Keysight Technologies Inc. brand power meters and components. The required series of power meters and associated components will be utilized in direct comparison calibration systems that NIST is building for and in collaboration with the Navy Primary Standard Laboratory. These systems will primarily be used to calibrate equipment that is manufactured by Keysight Technologies Inc. and therefore the new systems must be compatible. Additionally, NIST maintains existing direct-comparison calibration systems which include similar Keysight Technologies Inc. manufactured equipment. The new systems must operate similarly to NIST's existing systems to ensure future collaborative developments with the Navy Primary Standard Laboratory are possible.

These new systems are required for critical research and measurement services in radio frequency and microwave power. Utilizing different or non-compatible components would represent a significant time and monetary cost to NIST to replace existing systems currently in use.

Daniel Kent,
Contracting Officer
