

1) What is the operating system you want the cameras to integrate to? Our proposed solution is an open platform (ONVIF).

- **Response:** The cameras will not be integrated. They will provide a video feed to a Digital Video Recorder (DVR), which will store the data and allow for extraction to a Windows 11 PC via a standard removable memory unit.

2) Will the Hoist Camera be inside or outside the cabin?

- **Response:** The hoist camera will be mounted outside on the hoist arm, positioned to look down the path of the cable during hoisting operations.

3) Do you need recording or just live view for pilot? If so, how many days?

- **Response:** No, our DVR system will support this feature.

4) Would you be willing to test our proposed system? (We can ship it anywhere.)

- **Response:** Not at this time. I recommend including the proposed system, along with its specifications and features, in the RFI. We will evaluate the effectiveness of the proposed system as a potential solution for our upgrade plan.
