

CSO FA700025SC001 Call 004

Focused Area of Interest: Professionalism - Warfighter Training Support Services

Questions and Answers 14 April 2026

Q1: This call is for contractors looking to provide USAFA with concepts of how to define, write, and implement a 47-month Warfighter Training Support Solution - does that mean the quad chart should define the goals and objectives for the next 4 years?

A1: Yes. The quad chart should outline a **concept for the full 47-month training continuum**, including **goals, objectives, and outcomes across the lifecycle**, aligned to cadet development and warfighter readiness.

Q2: I was under the impression that the "writers" had already started for this process, which was the most recent contract you all solicited a proposal for several weeks ago. Is this a different requirement or an extension of that awarded contract? What would the relationship between these contractors be? (i.e. who is in charge and how is that clearly defined between contractors?)

A2: This is a **separate CSO effort**, not an extension of a previously awarded contract. The selected contractor will operate under a **new contract vehicle** and be **directly responsible to the Government**, with clear authority defined in the SOO (contractor accountable to CO/COR, not other contractors).

Q3: With regards to "technical" solutions, is the call more catered to information / technology companies that have the capability to produce online / digital learning tools, or would a more immersive training company still be considered if we incorporated technical solutions?

A3: Both are acceptable. The requirement supports **integrated solutions**, including **technical/digital tools and immersive training approaches**, as long as they contribute to achieving training outcomes.

Q4: When do you anticipate the contract being awarded and what is the anticipated period of performance?

A4: **Anticipated award/start:** ~1 June 2026; **Period of Performance:** ~47 months (through 31 May 2031)

Q5: Call 004 §1.4.1 states that solutions must "have 10+ years of military training and exercise planning experience." Please clarify whether this requirement applies to:

- (a) The offeror organization's corporate history of performing military training and exercise planning contracts;
- (b) The proposed key personnel's cumulative individual experience in military training and exercise planning; or
- (c) A combination of (a) and (b), and if so, how each will be weighted during Phase I evaluation.

A5: (c) A combination.

The SOO emphasizes **capability-based evaluation**, including:

- Organizational experience
 - Personnel qualifications
- Evaluation focuses on **credibility of the overall solution**, not rigid weighting

Q6: Has the government completed the analysis of this training continuum (Instructional goals, stakeholder inputs, number of curriculum hours, constraints, resources, personnel, facilities, delivery methods, training tasks) and if so, can they please share the results of the analysis? If not, would the contractor be required to complete this step and determine the requirements?

A6: No evidence the Government has completed a full analysis.

The contractor is expected to:

- Assess requirements
- Define training continuum inputs (curriculum, resources, etc.)

Q7: Does the government have a target date for starting the course? If so, does the gov want the full course delivered before the first scheduled execution, or would they consider a spiral development? For example, could the second-year curriculum be developed while simultaneously executing the first year?

A7: No fixed date provided.

A **phased/spiral development approach is feasible**, as the contractor is responsible for:

- Continuous development and improvement of training

Q8: What is the expected engagement of student hours annually? It is listed as a 47-month course, but how many hours of training does each cadet expect to receive monthly/annually? Is the contractor determining this as part of the analysis phase?

A8: Not predefined.

The contractor is expected to:

- **Determine training hours and engagement levels** as part of program design.

Q9: Are facilities and resources currently available for the contractor to utilize to create and deliver state of the art education and training? Is the contractor identifying the facility and resource requirements as part of the analysis phase?

A9: • Some facilities/resources are **government-provided (e.g., office space, network)**

• Contractor must:

- Identify additional requirements
- Plan infrastructure and resources

Q10: Will government personnel participate in instruction and management of this training program, or will the contractor cover 100% of execution of the course? If the intent is a mix of contractors and government personnel, please state the expected level of effort.

A10: Mixed model.

- Contractor: **primary execution and instruction**
- Government: **oversight, coordination, augmentation**

Q11: Transition Period Definition; The Call requests that offerors include "the timeline the vendor anticipates the transition period to full execution to take after award." Can the Government clarify how it differentiates transition activities from full execution, and whether transition planning and performance are considered as part of the Phase I technical evaluation?

A11: • **Transition period:** ramp-up, staffing, knowledge transfer

• **Full execution:** steady-state delivery

Transition planning is likely **evaluated as part of technical approach**

Q12: Contractor Role and Authority; Within the 47-month cadet military training continuum, does the Government envision the selected contractor primarily executing training activities,

providing advisory and planning support, or a combination of both? Additionally, how does the Government anticipate coordination and decision authority being exercised between USAFA personnel and contractor staff during training execution?

A12: Combination:

- **Execution + advisory + planning**
Authority:
- Contractor supports execution
- Government retains **decision authority and oversight**

Q13: Incumbent Contractor; Is there a current contractor performing this work or a substantially similar scope, and if so, are they eligible to recompet?

A13: Yes—requirement has existed and been recompeted multiple times.

Incumbents are **eligible to compete**

Q14: Evaluation of Outcome-Based Training Approaches; Given that training objectives are described as outcome-oriented and intentionally broad, can the Government describe how it intends to assess the effectiveness and merit of differing instructional methodologies, delivery mechanisms, and training models proposed by offerors during Phase I?

A14: Evaluation based on:

- Ability to meet **performance outcomes**
- Metrics such as:
 - ≥90% proficiency
 - ≥15% improvement
- Credibility of methodology

Q15: Relative Emphasis Across SOO Objectives; The Statement of Objectives identifies four primary objectives spanning design, logistics, execution, and evaluation. Does the Government consider any of these objectives to be of greater relative importance for Phase I submissions, or should offerors demonstrate comparable depth and maturity across all four areas?

A15: All four objectives are important.

Offerors should demonstrate **balanced capability across all areas**.

Q16: Teaming and Subcontracting; Are teaming arrangements and subcontractors acceptable under this effort, and if so, should teammates and their roles be identified in Phase I submissions?

A16: Yes.

Teaming and subcontractors are acceptable and should be **identified in Phase I**.

Q17: Cadet Volume and Surge Considerations; We understand the cadet wing (~4,000 cadets) and time frame of training (47-months). Our grads have knowledge of the military training system from their time (M5, summer programs, etc), does the Government have a more detailed summary of the anticipate seasonal or event-based surge periods (e.g., summer programs or academic year training) that should be reflected in proposed staffing and execution approaches?

A17: Yes—surge periods include:

- Summer training programs
 - Major exercises
- Contractor must plan for **scalable surge support**

Q18: On-Site Presence Expectations; Can the Government clarify its expectations regarding contractor personnel presence on-site at USAFA? Specifically, is a predominantly full-time, on-site staffing model anticipated, or may offerors propose a phased, episodic, or hybrid on-site presence aligned to training events and lifecycle phases?

A18: Primarily **on-site presence expected**, but:

- Hybrid/episodic models are acceptable if aligned to training events.

Q19: Training Data and Performance Evaluation Systems; Does the Government maintain preferred platforms, data standards, or systems of record for capturing cadet performance data, training assessments, and after-action reviews? Alternatively, should offerors propose an integrated data collection and evaluation framework as part of their overall solution?

A19: No mandated system identified.

Offerors should propose:

- **Integrated data collection and evaluation framework**

Q20: Security Clearance Requirements; Can the Government specify the security clearance levels required for contractor personnel, and whether any roles require access to classified information or systems?

A20: Not specified.

Likely:

- **CAC access required**
- Clearance level depends on role (generally low/unclassified unless specified)

Q21: Budget Range; Is the Government able to provide a budget range or ceiling for this effort to assist offerors in calibrating the scale and resourcing of their proposed solutions?

A21: The Government does not have a budget range or ceiling.

Q22: Does the government expect one quad chart per product or solution proposed, or one single quad chart per CSO response?

A22: Typically:

- **One quad chart per solution/concept**

Q23: Does "time-phased" refer to the expected annual breakdown (e.g., base year plus option years) as described in the documents provided? Is an annual bottom line sufficient for this purpose?

A23: Yes.

“Time-phased” likely refers to:

- Annual or phased breakdown
An **annual summary is sufficient** for Phase I.

Q24: Will the answers to submitted questions be posted publicly for all participants to view?

A24: Yes.

Answers are typically **posted publicly for all participants on sam.gov**.

Q25: Does the Government have an estimate of how many contract cadre members would be needed to support course instruction?

A25: This will be a performance-based contract and the vendor is required to propose the number of cadre members needed to support course instruction.

Q26: Is there a breakdown available for the 47 months of training, such as hours of training per month, number of classes, number of students per class, etc., to assist with ROM determination?

A26: No detailed breakdown provided.

Contractor must:

- Develop ROM assumptions
- Define training structure

Q27: What platform, software, or applications is USAFA currently using that any proposed solution will need to integrate with (for example, course scheduling, LMS, LRS, survey/testing software)?

A27: Not specified.

Government provides:

- Network access
Offerors should propose **compatible or integrable systems**

Q28: What format is used for USAFA syllabi, POIs, lesson plans, and how are these products stored and managed?

A28: Not specified.

Contractor must:

- Develop and deliver:
 - SOPs
 - Lesson plans
 - Training materials
- Ensure Government ownership

Q29: Is USAFA currently utilizing any AR/VR/MR technologies?

A29: Not specified.

Use of AR/VR/MR is **permissible if proposed**.

Q30: In regard to Objective 3, is the contractor providing trainers and building all the course content, or facilitating the development of curriculum, course content, etc. with the government providing the actual training and materials?

A30: Contractor is responsible for:

- **Both curriculum development and training execution**, while coordinating with Government personnel

Q31: The following information must be included in the Phase I Quad Chart. Quad Charts shall not exceed 1-page in landscape view. Quad Charts must follow the formatting guidelines on the slide template below. All font/text must be at least 12-point font. Will the Government allow the graphic on the Quad Chart to be produced in less than 12 point font?

A31: The Government will allow the graphic on the Quad Chart to be produced in less than 12 point font.
