

Single Source Justification (Simplified Acquisition)**Section A: General Contract Information**

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)? ☐ Yes ☒ No

Contracting Activity: 316th Contracting Squadron

Project/Program Name: PAG Kitchen Appliances

Purchase Request / Local ID Number: F1D1016063A001

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The PAG requires kitchen appliances that are required to meet unique safety specifications, including integrated automatic safety valves and spark igniters, which are essential for safe operation within a hangar environment. The commercial flight kitchen appliances are for an active aircraft hangar where open doors expose the appliance to potentially strong winds that pose a significant risk of extinguished gas pilot lights and subsequent gas accumulation in the facility. To mitigate this critical safety hazard, all appliances must include integrated automatic gas safety valves and spark igniters.

(2) Charbroilers

36" Jade HD Range, grills

Model No. JTRH-36B

(1) Range

36" Jade HD Range, 6 open burners

Model No. JTRH-6

(1) Griddle

48" Jade Range, thermostatic griddle

Model No. JTRH-48GT

The new Jade Ranges will feature flame failure shut off and spark ignitions as requested.

Section C: Justification for Soliciting from a Single Source or Brand Name

IAW RFO 6.103-1 Only one responsible source and no other supplies or services will satisfy agency requirements, there is only one vendor that can provide this unique kitchen appliance requirement while also possessing the proper clearance to be able to access and install the kitchen appliances for the PAG. Either in themselves is not a strict limiting factor, but combined together limits sources drastically and only one source was located through market research.

Section D: Efforts to Obtain Competition

In accordance with RFO Part 10, market research was conducted to identify commercial solutions for flight kitchen appliances that meet the Government's essential safety requirements. The research efforts included:

Searching the GSA Advantage! portal to identify potential contractors and products available through pre-established government sources.

Single Source Justification (Simplified Acquisition)

Soliciting information and quotes from multiple commercial kitchen equipment suppliers to assess the general availability of the required safety features.

Reviewing commercial product catalogs and specifications to determine if the required safety features—integrated gas safety valves and spark ignitors—are standard in the commercial marketplace.

The results of this market research concluded the following:

The specific safety features required for safe operation within an aircraft hangar are not standard on most commercial-grade appliances.

While multiple vendors can supply general-purpose kitchen equipment, none of the alternative sources identified through GSA or direct solicitation could provide products that met the Government's minimum, mandatory safety specifications or possess the required clearance to gain access for the installation of the equipment.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

Pre-solicitation notices will be posted to see if other small businesses have both the access and capability to fulfill the requirement. Market will be monitored for availability of new equipment that meets the automatic shut-off requirement.

Section F: Contracting Officer's Determination

I have determined, in accordance with [REDACTED] that the circumstances of this contract action deem only a single source is reasonably available. RFO 12.102
