

Industry Day/Sources Sought Questions and Answers

Related SAM.gov Notice	Topic Area	Question	Answer
TEST4_Sources_Sought	Fire Services	Clarify the applicability of PWS 7.1 (Fire Protection and Medical Response) and 7.4 (Protective Services Dispatch Center) considering the Mission Support Future Architecture Program (MAP) that established enterprise contracts for NASA Fire Services Contract (NFSC) and NASA Protective Services Contract (NPS). If these functional areas remain in some capacity within the TEST4 scope, it is important to understand the responsibilities, coordination, and communication between the two contracts and TEST4 to prevent overlapping or duplication of effort.	At present, fire and emergency services are expected to continue under the TEST4 acquisition rather than through the enterprise contracts. Accordingly, all responsibilities for managing and operating Fire Protection and Medical Response services, as well as Protective Services Dispatch, as outlined in the PWS, remain in effect.
TEST4_Sources_Sought	NAICS	Differences between TEST3 and TEST4 listings. Confirm that the NAICS for TEST4 will be 541715, Research and Development in the Physical, Engineering, and Life Sciences...with a small business size standard of 1,300 employees.	The most appropriate NAICS code for this potential acquisition is 541715 — Research and Development in the Physical, Engineering, and Life Sciences (except Nanotechnology and Biotechnology), Exception 3: Guided Missiles and Space Vehicles; Their Propulsion Units and Propulsion Parts (Size Standard: 1,300 employees).
TEST4_Sources_Sought	NAICS	Given the nature of the work (propulsion testing; propellants, aerospace fluids, materials, and components testing...), will NASA consider using NAICS 541715 Exception 3 Guided Missiles and Space Vehicles, Their Propulsion Units and Propulsion Parts (1,500 Employee Size Standard)?	The most appropriate NAICS code for this potential acquisition is 541715 — Research and Development in the Physical, Engineering, and Life Sciences (except Nanotechnology and Biotechnology), Exception 3: Guided Missiles and Space Vehicles; Their Propulsion Units and Propulsion Parts (Size Standard: 1,300 employees).
TEST4_Industry_Day	Chart Availability	Will you be posting slides on Sam.gov?	Yes, they have already been posted to SAM.gov and will be updated to reflect the applicable NAICS exception and size standards.
TEST4_Industry_Day	Fire Services	Is the fire fighters CBA part of an enterprise contract for NASA that provides services to multiple locations? Is the CBA negotiated separately from the other NASA Centers	The current firefighter CBA is between the contractor and the local union. It is not part of the enterprise wide contract.
TEST4_Industry_Day	IT	Is there an IT component supporting all of these scientific tests WSTF will be managing? It might include things like IT security testing, software control testing or any communications aspect of the mission?	Yes, the WSTF test environment has many data acquisition systems that interface with the test environments. The IT systems supporting the test environments have many IT tools which are automated, including antivirus, configuration management (Bigfix) and audit logging (Splunk). Software quality control is performed by WSTF SM&A with representation from each of the departments. WSTF implemented the Software Quality Assurance Planning, (SQAP) application.
TEST4_Industry_Day	IT	Will CMMC (Cybersecurity Maturity Model Certification) be required?	No. NASA itself does not directly fall under the Department of Defense's Cybersecurity Maturity Model Certification (CMMC) program.
TEST4_Industry_Day	One on One Meetings	Will one-on-one meetings be limited to potential primes?	One on one meetings will be open to anybody that's registered for the meetings and site tour.

TEST4_Industry_Day One on One Meetings How many team members are authorized per company			For the site tour, two members per company will be allowed. For the one-on-one meetings, four team members per company and one meeting per company will be allowed.
TEST4_Industry_Day Pressure Systems Are there high pressure air systems (e.g., 50,000 psi) and HP steam systems to be maintained?			WSTF does not operate or maintain pneumatic systems in the 50,000 psi range. The highest-pressure pneumatic systems are 10,000 psi oxygen flammability test chambers/systems. In the Propulsion Office, WSTF has large and small steam altitude systems at pressures of MAWP 375 psig (~280 psig when running) and 250 psig (~205 psig when running), respectively. The National Boiler Inspection Code (NBIC) defines these as high pressure and they are treated as very critical and high-energy systems.
TEST4_Industry_Day Small Business Is the contract being considered for a SB Setaside under 541715 NAICS?			No determination has been made at this time. Continue to monitor SAM.gov for the final Request for Proposal.
TEST4_Industry_Day Small Business I am sure there will be more information forthcoming, but does the government anticipate a similar small business participation requirement or will it be reduced? TEST3 had the small business requirement near 31%, however I believe it is better suited for around 25% to small business without the special socioeconomic set asides. We are aware the current incumbent's subcontractor is a small business performing 25% without additional socioeconomic categories.			No determination has been made at this time. Continue to monitor SAM.gov for the final Request for Proposal.
